

MDT★ **CADD UPDATE**

To: All CADD Users

From: [MDT EISS](#)

Date: 9-16-10

Post Term: 30 days

Subject: CADD update notification

There have been numerous requests that the metric .GTD (preference) file be updated for use by CADD users. Tyrel has completed the update and fixed the preference file so that the scales and text should be similar to the English preference files, it is for metric rural jobs only. The mapping scale for visualizing the bore holes in plan view is 4.5 not 2 like the English mapping scale.

Files Affected: CADDSTD\GEOPAK\MDT_BOREHOLE_MET_RURAL.GTP

User Action: none

Documentation:

Because this is for metric processing, no documentation will be created beside this memo. You may want to add something into Section 39 of the Geopak User Manual if you work with metric projects.
