Subject: RE: Urban / Rural

There have been some questions about what length should be shown for Urban Roadway in the Linear Data. Length of Urban Roadway should only be shown for the portion of a project within the urban limits of the 15 cities with designated urbanized areas. The linear data is used for tracking expenditures on urban routes which only exist in these 15 cities. These cities are:

Anaconda	Kalispell
Belgrade	Laurel
Billings	Lewistown
Bozeman	Livingston
Butte	Miles City
Great Falls	Missoula
Havre	Whitefish
Helena	

No Urban Roadway length should be shown for any other locations, regardless of whether or not an urban design is done (and is appropriate). If you have any questions please contact me.

Thanks, pf
