

**PROPOSED DRAFT
FEBRUARY 2015**

620.03.1 General

Furnish a manufacturer's material certification or data sheet for the product to be used. Do not apply materials that do not meet the contract requirements. The Project Manager may request a manufacturer's sample or take field samples for testing. Furnish a material sample weighing at least 2 pounds (0.91 kg). Furnish temporary waterborne traffic paint, waterborne traffic paint, high durability waterborne traffic paint and epoxy traffic paint listed on the QPL.

Deleted: ,

Deleted: , and glass beads

COMMENTS

1. A while back we requested a spec change to remove the requirement that glass beads be listed on the QPL in order to be incorporated into MDT projects (Standard Specification 620.03.1). MDT was testing all beads supplied on projects due to issues with quality last year and improved testing capabilities. We would like to rescind that request and continue requiring the beads be supplied from a source listed on the QPL.

The quality issues seem to have been resolved and having the suppliers listed on the QPL allows us to exclude specific producers rather than subjecting all suppliers to the additional testing. We will continue testing more frequently than was done previously but that is addressed under the QPL requirements and doesn't involve a specification change.

Response: Agreed
