## 1. INTRODUCTION

The 2014 Forsyth-Northwest (FNW) wetland monitoring report documents the second year of monitoring at the four FNW sites: West Site (1), Middle Site (2), East Site (3), and Treasure County Line Site (4). The FNW Wetland Mitigation Sites were developed to mitigate for a cumulative total of 8.98 acres of wetland impacts associated with two Montana Department of Transportation (MDT) highway construction projects; 1) Volborg – North and South project constructed in 2004, and 2) the Forsyth – Northwest project constructed in 2012. The 2014 Forsyth-Northwest Wetland Mitigation Monitoring Report includes monitoring results for each of the four sites and a discussion of the mitigation credits developed for the FNW project.

The four wetland mitigation sites are located in Rosebud County in the Sagebrush Steppe ecoregion of the Northwest Great Plains. The sites are within Watershed 14 (Middle Yellowstone). Three sites are located northwest of Forsyth along Montana Highway 12 at mile markers 262.3 (East-3), 261.9 (Middle-2), and 260 (West-1) within the Big Porcupine Creek sub-basin (Figure 1). Treasure County Line (Site 4), located approximately 12 miles west of Forsyth at Interstate 94 mile marker 81.75 (Figure 2), is situated southwest of the intersection of Interstate 94 and Reservation Road in the Lower Yellowstone River-Sunday Creek sub-basin. Figures 3 through 10 (Appendix A) show the monitoring activity locations and mapped site features for each site, respectively. Appendix B contains the MDT Wetland Mitigation Site Monitoring Forms, the USACE Great Plains Regional Supplement Wetland Determination Data Forms (USACE 2010), and the 2008 MDT Montana Wetland Assessment Forms (Berglund and McEldowney. 2008) for each site. Appendix C contains photographs of the project areas and Appendix D includes the project plan sheets.

### 1.1. Impacts and Mitigation

Wetland impacts for the Forsyth-Northwest project were identified in the US Army Corps of Engineers (USACE) permit #NWO-2006-90676-MTB and a wetland mitigation monitoring plan prepared by MDT and dated February 15, 2012. The wetland mitigation sites are intended to provide credits for impacts caused by the Volborg-N & S project, constructed in 2004, and the FNW project, completed in 2012. The Treasure County Line mitigation site was constructed in 1999, prior to the 2.18 acres of impact resulting from the FNW project. The 2012 mitigation plan outlined that this site had produced 1.78 acres of wetland credit, awarded at a 1:1 credit ratio. Applying standard wetland compensatory mitigation ratios (Montana Regulatory Program, April 2005), the total area of required mitigation presented in the approved wetland mitigation plan was 11 acres. Table 1 provides a summary of the impacts, appropriate ratios, and anticipated mitigation requirements. The anticipated wetland mitigation acreages produced by the FNW project are listed by site and mitigation type in Table 2. Mitigation requirements and estimated credit development are discussed in more detail in the Comprehensive Credit Summary section of this report.

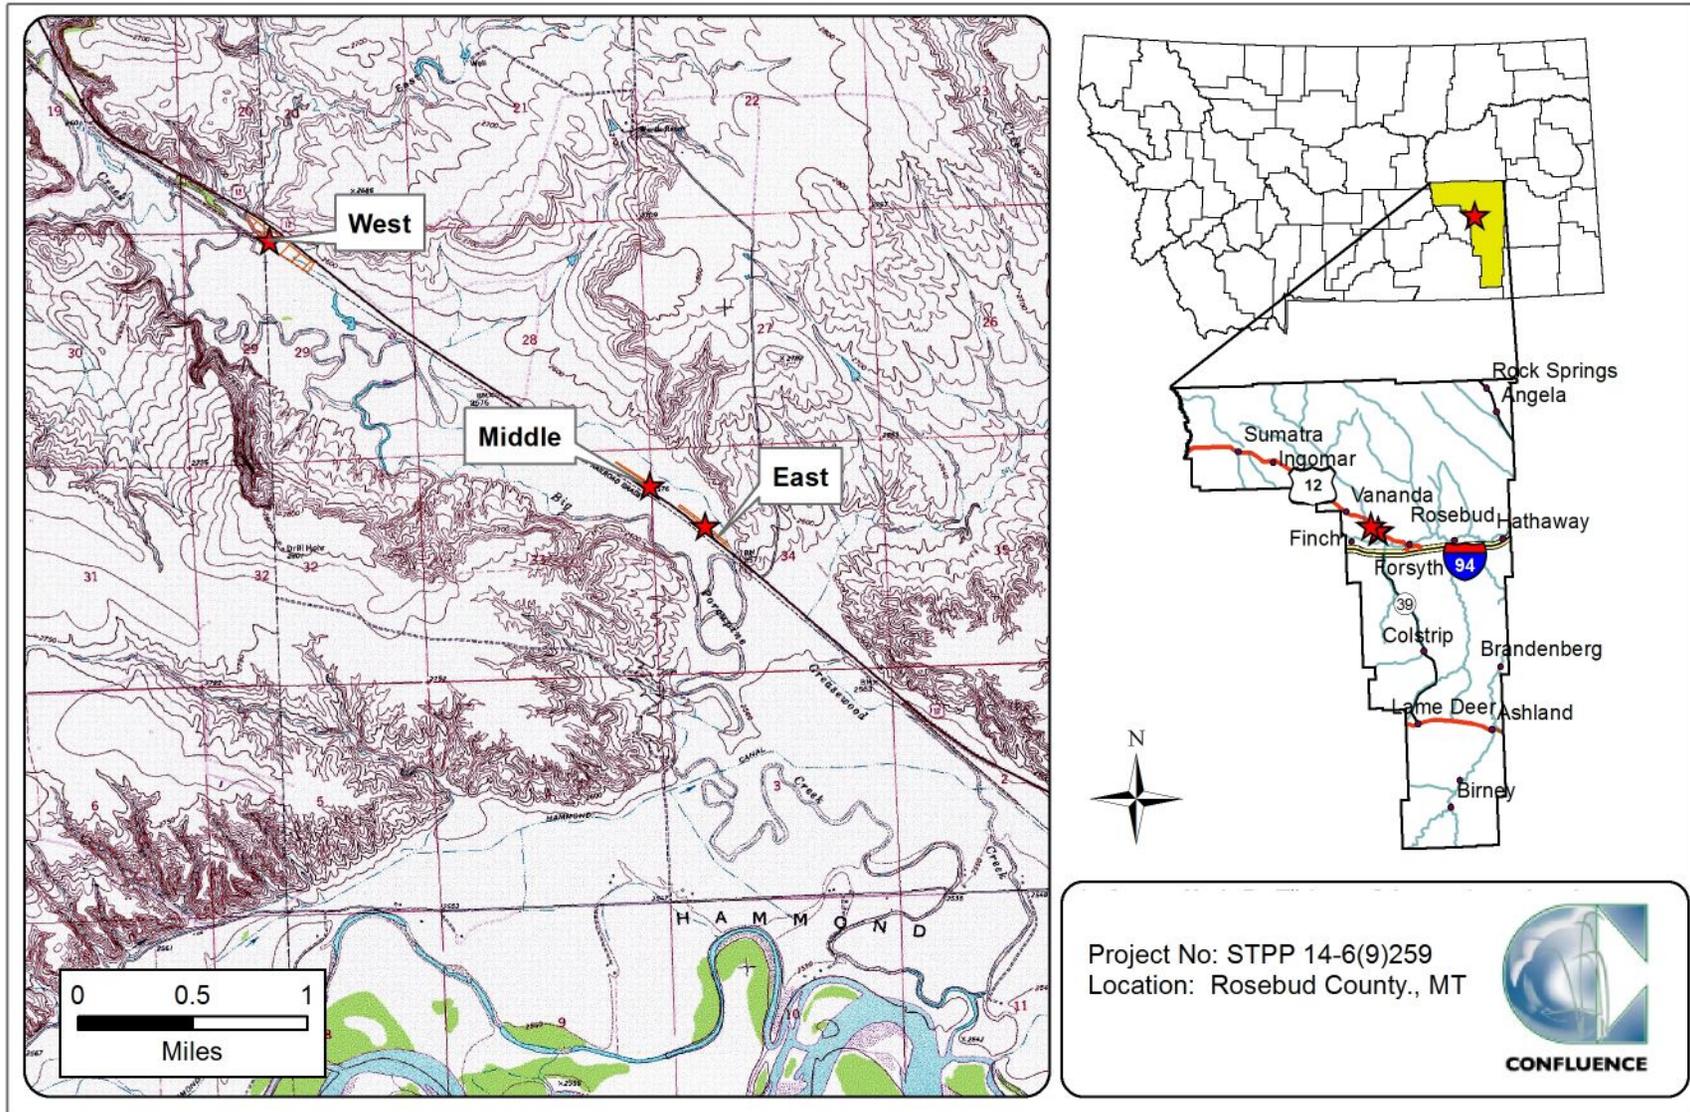

Figure 1. Project locations of Forsyth Northwest (FNW) Mitigation Sites: West (Site 1), Middle (Site 2), and East (Site 3).

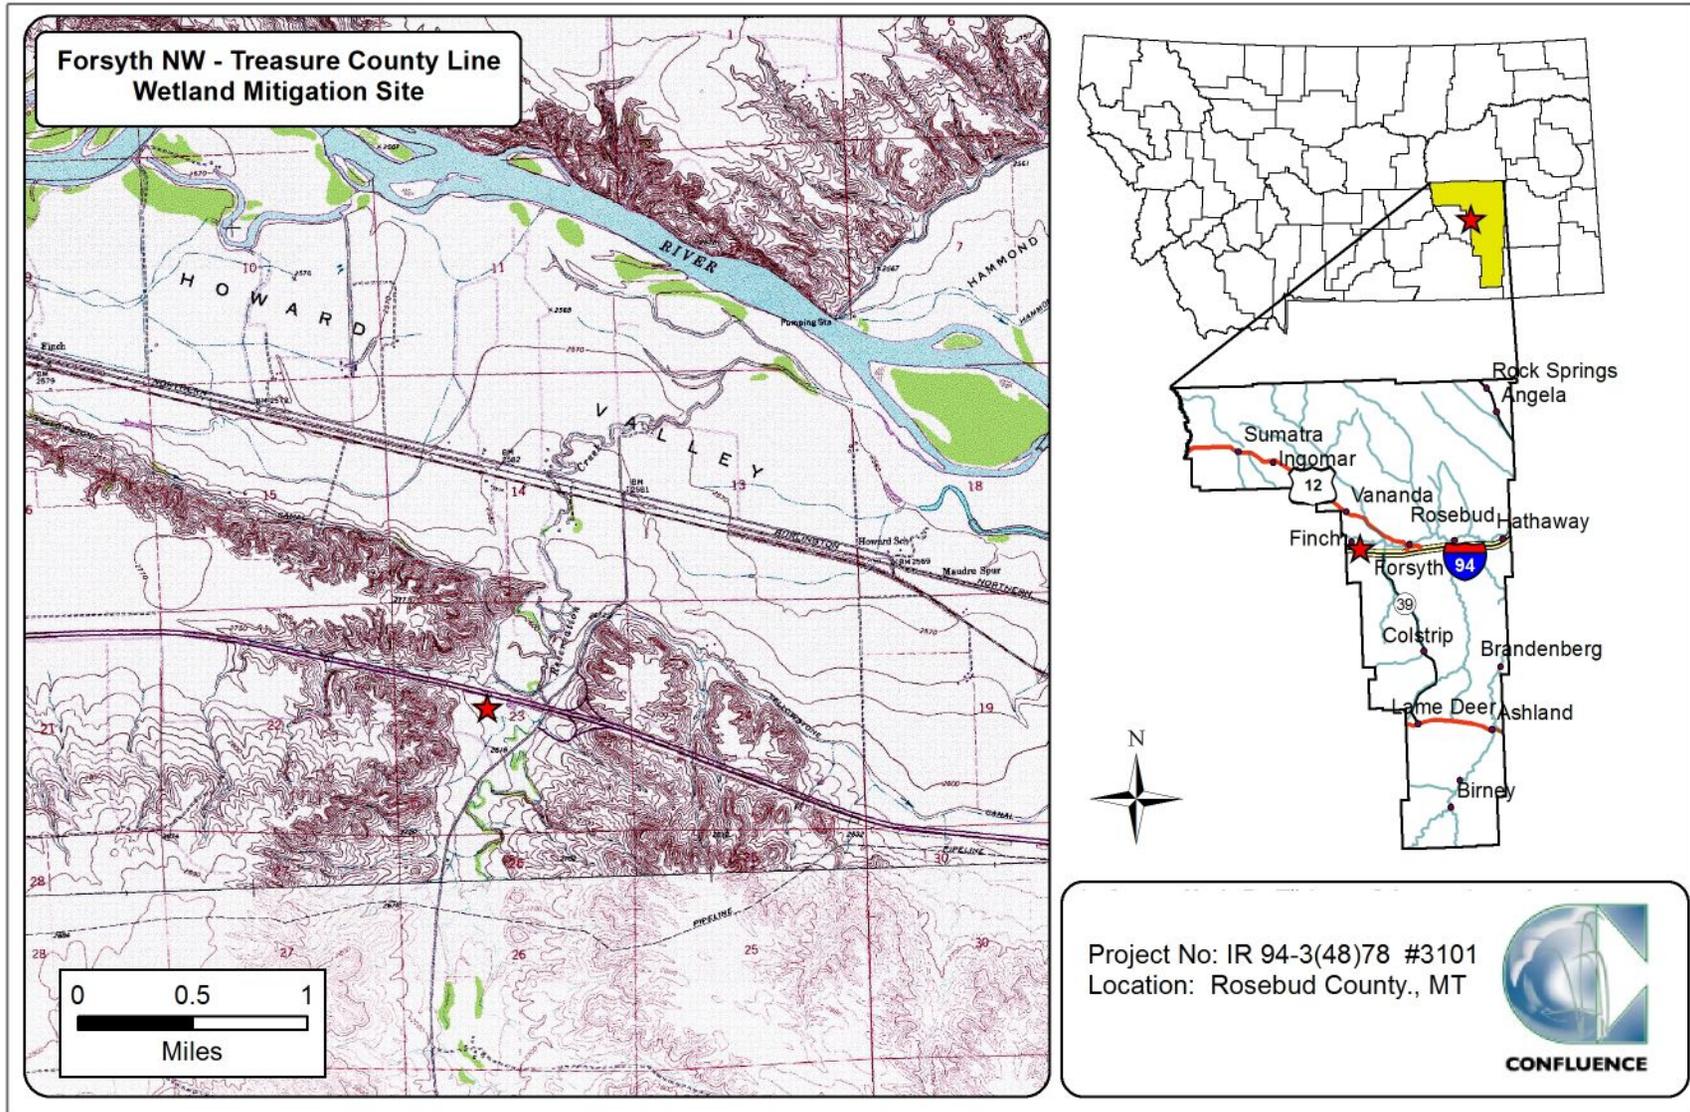

Figure 2. Project location of FNW - Treasure County Line (Site 4).

**Table 1. Wetland impacts to be mitigated at FNW sites 1, 2, 3, and 4.**

| MDT PROJECT             | IMPACTS (acres) | CREDITS (acres) | BALANCE REMAINING (acres) | RATIO     | MITIGATION (acres) |
|-------------------------|-----------------|-----------------|---------------------------|-----------|--------------------|
| Volborg - North & South | 6.80            | 0.00            | 6.80                      | 1.5:1     | 10.20              |
| Forsyth - Northwest     | 2.18            | 1.78            | 0.40                      | 2:1       | 0.80               |
| <b>TOTAL</b>            | <b>8.98</b>     | <b>1.78</b>     | <b>--</b>                 | <b>--</b> | <b>11.00</b>       |

|                                    | <b>Total for all FNW sites (1-4)</b> | <b>13.57</b> |

**1.2. General Mitigation Objectives**

The MDT-developed performance standards and monitoring requirements (as presented in the approved mitigation plan) for the FNW sites are listed below. Aside from monitoring requirements, there are no quantitative metrics or criteria associated with the success of these mitigation sites.

**1. Vegetation community:**

- a. Establish permanent photo points
- b. Establish vegetation transects to monitor the development of each vegetative community and its diversity.
- c. Develop a plant species list during each monitoring visit.
- d. Plot vegetative communities on as-built plans.
- e. Determine areal coverage of vegetative community from as-built plans, aerial photographs, or by conventional or GPS survey every other year, starting in 2013.
- f. Monitor for, and control invasive weed species.

**2. Soils**

- a. Establish monitoring points for hydric soil development.
- b. Monitor and document the development of hydric soils utilizing a Munsell Soil Chart.
- c. Document the progression of reducing soil conditions as the soil transitions from an aerobic state, to an anaerobic (hydric) state.

- 3. Hydrology:**
  - a. Delineate area of inundation no earlier than the second weekend of June every other year, starting in 2013.
  - b. Survey and document the hydrology within the new wetland area no earlier than the second weekend of June every other year, starting in 2013.
  - c. Measure the horizontal and vertical extent of the soil saturation zone at the margins of the wetlands.
- 4. Wildlife Community:**
  - a. Birds:**
    - i. Create and maintain a cumulative bird list of species observed.
  - b. Mammals:**
    - i. Create and maintain a list of mammalian species observed either directly or indirectly, i.e., tracks, scat, etc., during the biennial monitoring visits.
  - c. Herpetiles:**
    - i. Create and maintain a list of the amphibian and reptile species observed either directly or indirectly, i.e., tracks, nests, etc., during the biennial monitoring visits.
- 5. MDT Functional Assessment**
  - a. A formal MDT Functional Assessment will be completed during each monitoring period.
- 6. Routine Wetland Determination**
  - a. A Routine Wetland Determination form will be completed during each monitoring period according to the 1987 Corps of Engineers Wetland Delineation Manual and to the terms most applicable "Regional Supplement", most likely the Western Great Plains (LRR G) supplement.

### **1.3. Mitigation Sites**

The following sections provide a general discussion of the four wetland mitigation sites: West Site (1), Middle Site (2), East Site (3), and Treasure County Line (4). The discussion includes location, site topography, mitigation objectives, and targeted wetland community goals.

#### **1.3.1. West Site – Site 1**

The West mitigation site (1) is a 13.71-acre site owned by MDT and located at the mouth of East Spring Coulee in the floodplain of Big Porcupine Creek. The site is intended to provide 10.38 acres of compensatory wetland mitigation. Approximately 1.29 acres of pre-existing wetlands will be preserved at this site. The monitoring area boundary is shown on Figures 3 and 4: West Site – Site 1 (Appendix A). Mitigation plan sheets are presented in Appendix D. Proposed mitigation actions included the following:

- Excavation of new wetland areas with undulating bottoms.

- Create emergent wetlands by placing salvaged wetland sod and hydrophytic vegetation within the excavated wetlands and seeding with wetland grass mix.
- Constructing a water retention dike on the east end of the project site.

The targeted wetland community types included emergent, scrub-shrub, and forested classes dominated by herbaceous hydrophytes, willows, and cottonwoods. Site construction was completed in summer 2012 and the revegetation was completed from August through October 2012.

### **1.3.2. Middle Site – Site 2**

The Middle mitigation site (2) is a 1.80-acre site owned by MDT. The site is adjacent to US Highway 21, situated among old meander scars across the Big Porcupine Creek floodplain. This area is intended to provide 0.34 acres of compensatory wetland mitigation. The monitoring area boundary is shown on Figures 5 and 6: Middle Site – Site 2 (Appendix A). Mitigation plan sheets are presented in Appendix D. Proposed mitigation actions included the following:

- Excavation of new wetland areas with undulating bottoms.
- Create emergent wetlands by placing salvaged wetland sod and hydrophytic vegetation within the excavated wetlands and seeding with wetland grass mix.

The proposed wetland community for this site is anticipated to be a palustrine emergent system dominated by herbaceous hydrophytes. Site construction was completed in summer 2012 and the revegetation was completed from August through October 2012.

### **1.3.3. East Site – Site 3**

The East mitigation site (3) is a 2.74-acre site owned by MDT. The site is located approximately 1,000 feet from the Middle site (2) and is also directly adjacent to US Highway 21. The East site is intended to provide 1.07 acres of compensatory wetland mitigation. The monitoring area boundary is shown on Figures 7 and 8: East Site – Site 3 (Appendix A). Mitigation plan sheets are presented in Appendix D. Proposed mitigation actions included the following:

- Excavation of new wetland areas with undulating bottoms.
- Create emergent wetlands by placing salvaged wetland sod and hydrophytic vegetation within the excavated wetlands and seeding with wetland grass mix.

The proposed wetland community for this site is anticipated to be a palustrine emergent system dominated by herbaceous hydrophytes. Site construction was completed in summer 2012 and the revegetation was completed from August through October 2012.

### **1.3.4. Treasure County Line Site – Site 4**

The Treasure County Line mitigation site (4) is a 5.89-acre site owned by MDT. The site is located adjacent to an existing wetland complex along Reservation Creek and is intended to provide 1.78 acres of compensatory wetland mitigation. The monitoring area boundary is shown on Figure 9 and 10: Treasure County Line Site – Site 4 (Appendix A). Mitigation plan sheets are presented in Appendix D. Proposed mitigation actions included the following:

- Excavation of new wetland areas with undulating bottoms.
- Create emergent wetlands by placing salvaged wetland sod and hydrophytic vegetation within the excavated areas and seeding with wetland grass mix.

The proposed wetland community for this site is anticipated to be a palustrine emergent system dominated by herbaceous hydrophytes. Site construction was completed in 1999.

## **2. METHODS**

The Forsyth NW – West site was monitored on June 19, 2014; the Middle and East Sites were monitored the next day on June 20, 2014. The Treasure County Line site was monitored on July 10, 2014. Information contained on the Mitigation Monitoring Forms and Wetland Data Forms was entered directly into an electronic tablet during the field investigation (Appendix B). Monitoring activity locations for West, Middle, East, and Treasure County Line Sites were mapped with a global positioning system (GPS) as illustrated on Figures 3, 5, 7 and 9, respectively (Appendix A). Information collected included wetland delineation, vegetation community mapping, vegetation transect monitoring, soil and hydrology data, bird and wildlife use documentation, photographic documentation, functional assessments, and a non-engineering examination of the infrastructure established within the mitigation project area.

### **2.1. Hydrology**

The presence of hydrological indicators as outlined on the Wetland Data Forms was documented at four data points within the West Site, two data points within the Middle Site, two points within the East Site, and two data points within Treasure County Line. Hydrologic indicators were evaluated according to features observed during the site visit. The data were recorded on the electronic Wetland Data Forms (Appendix B). Hydrologic assessments allow evaluation of mitigation goals addressing inundation and saturation requirements.

Technical criteria for wetland hydrology guidelines have been established as “permanent or periodic inundation, or soil saturation within 12 inches of the ground surface for a significant period (12.5 percent of the growing season) during the growing season” (USACE 2010). Systems with continuous inundation or saturation for greater than 12.5 percent of the growing season are classified as jurisdictional wetlands. The growing season is defined for purposes of this

report as the number of days when there is a 50 percent probability that the minimum daily temperature is greater than or equal to 28 degrees Fahrenheit (Environmental Laboratory 1987). Temperature data recorded for the meteorological station at Forsythe, Montana (243098), have a median (5 years in 10) growing season length of 156 days. Areas defined as wetlands would require 19.5 days of inundation or saturation within 12 inches of the ground surface to meet the hydrology criteria. Soil pits excavated during the wetland delineation were used to evaluate groundwater levels within 18 inches of the ground surface. The data were recorded on the Wetland Determination Data Form (Appendix B).

## **2.2. Vegetation**

The boundaries of general dominant species-based vegetation communities were determined in the field during the active growing season and subsequently delineated on the 2014 aerial photographs. The percent cover of dominant species within a community type was estimated and recorded using the following values: 0 (less than 1 percent), 1 (1 to 5 percent), 2 (6 to 10 percent), 3 (11 to 20 percent), 4 (21 to 50 percent), and 5 (greater than 50 percent) (Appendix B). Community types were named based on the predominant vegetation species that characterized each mapped polygon (Figures 4, 6, 8, and 10, Appendix).

Temporal changes in vegetation were evaluated through annual assessments of static belt transects (Figures 3, 5, 7 and 9, Appendix A). Vegetation composition was assessed and recorded along vegetation belt transects established at all sites during the 2014 reconnaissance visits for each of site. The transects replaced any previously located transects to better represent and capture future vegetative changes at each of the remaining sites. Transects are 10 feet wide and vary in length at each site. The transect endpoints were recorded with a GPS unit.

Spatial changes in the dominant vegetation communities were documented along the stationed transect. The percent cover of each vegetation species within transects was estimated using the same values and cover ranges listed for the community polygon data (Appendix B). Photographs were taken at the endpoints of each transect during the monitoring event (Appendix C). The number of live individuals observed for each woody species planted was recorded during the monitoring event.

The Montana State Noxious Weed List (September 2010), prepared by the Montana Department of Agriculture, was used to categorize weeds identified within the site. The location of noxious weeds was noted in the field during the investigation and mapped on the 2014 aerial photos (Figures 4, 6, 8 and 10, Appendix A). The noxious weed species identified are color-coded. The locations are denoted with the symbol “x”, “▲”, or “■” representing 0.0 to 0.1 acres, 0.1 to 1.0 acres, or greater than 1.0 acre in extent, respectively. The letters T, L, M, or H, represent the cover classes, standing for less than 1 percent, 1 to 5 percent, 6 to 25 percent, and 26 to 100 percent, respectively.

### **2.3. Soil**

Soil information was obtained from the *Soil Survey for Rosebud County* and *in situ* soil descriptions (NRCS 2010). Soil cores were excavated using a hand auger and evaluated according to procedures outlined in the USACE 1987 Wetland Manual. A description of the soil profile, including hydric indicators when present, was recorded on the Wetland Data Form for each profile (Appendix B).

### **2.4. Wetland Delineation**

Waters of the U.S. including special aquatic sites and jurisdictional wetlands were delineated throughout the project area in accordance with criteria established in the 1987 Manual and the 2010 Great Plains Regional Supplement (USACE 2010). The technical criteria for hydrophytic vegetation, hydric soil, and wetland hydrology described in the 2010 Regional Supplement must be satisfied to delineate a representative area as jurisdictional. The name and indicator status of plant species was derived from the 2014 National Wetland Plant List (NWPL) (Lichvar *et al.*, 2014). A Routine Level-2 on-site Determination Method (Environmental Laboratory 1987) was used to delineate jurisdictional areas within the project boundaries. The information was recorded electronically on the Wetland Determination Data Form (Appendix B).

The wetland boundary was determined in the field based on changes in plant communities and/or hydrology, and changes in soil characteristics. Topographic relief boundaries within the project area were also examined and cross referenced with soil and vegetation communities as supportive information for this delineation. Vegetation composition, soil characteristics, and hydrology were assessed at likely wetland and adjacent upland locations. If all three parameters met the criteria, the area was designated as wetland and mapped by vegetation community type. If any one of the parameters did not exhibit positive wetland indicators, the area was determined to be upland unless the site was classified as an atypical situation, potential problem area, or special aquatic site, i.e., mudflat. The wetland boundary was surveyed and identified on the 2014 aerial photographs. Wetland areas were estimated using geographic information system (GIS) methods.

### **2.5. Wildlife**

Observations and other positive indicators of use of mammal, reptile, amphibian, and bird species were recorded on the wetland monitoring form during each of the site visits. Indirect use indicators, including tracks, scat, burrow, eggshells, skins, and bones, were also recorded. These signs were recorded while traversing the site for other required activities. Direct sampling methods, such as snap traps, live traps, and pitfall traps, were not used. A comprehensive list of wildlife species observed on the sites each year is compiled and updated annually in each report.

## **2.6. Functional Assessment**

The MDT Montana Wetland Assessment Method (Berglund and McEldowney 2008) was used to evaluate functions and values on the sites. This method provides an objective means of assigning wetlands an overall rating and provides regulators a means of assessing mitigation success based on wetland functions. Functions are self-sustaining properties of a wetland ecosystem that exist in the absence of society and relate to ecological significance without regard to subjective human values (Berglund and McEldowney 2008). Field data for this assessment were collected during the site visit. One Wetland Assessment Form was completed at each mitigation site (assessment area (AA) (Appendix B).

## **2.7. Photo Documentation**

Monitoring at photo points provided supplemental information documenting wetland and upland conditions, site trends, current land uses surrounding the site, and the status of the vegetation transects. Photographs were taken at established photo points and at transect endpoints throughout each of the mitigation sites during the field survey (Appendix C). Photo point locations were recorded with a resource-grade GPS unit (Figures 3, 5, 7 and 9, Appendix A).

## **2.8. GPS Data**

Site features and survey points were collected with a resource grade Thales Pro Mark III GPS (Global Positioning System) unit during the 2014 monitoring season. Points were collected using WAAS-enabled differential correction satellites, typically improving resolution to sub-meter accuracy. The collected data were then transferred to a personal computer, subsequently exported into GIS, and drawn in Montana State Plane Single Zone NAD 83 meters. In addition to GPS, some site features within the site were hand-mapped onto the 2014 aerial photographs and digitized. Site features and survey points that were mapped included fence boundaries, photographic points, transect endpoints, wetland boundaries, vegetation community boundaries, and soil sample locations.

## **2.9. Maintenance Needs**

Channels, engineered structures, fencing, and other features were examined during the site visit for obvious signs of breaching, damage, or other problems. This was a cursory examination and not an engineering-level structural inspection.

### 3. RESULTS

#### 3.1. West Site – Site 1

##### 3.1.1. Hydrology

The average total annual precipitation recorded at the Forsythe, Montana weather station (243098), from January 1975 to September 2014 was 14.48 inches (WRCC 2014). Total precipitation recorded at this station for 2012 was 7.81 inches, the driest year on record at this station. Total precipitation in 2013 totaled 19.47 inches and was the third wettest year on record at this station exceeding the average by five inches. The precipitation between January and August totaled 13.85 inches in 2013 and 15.63 in 2014, both of which exceeded the long-term average of 10.52 inches for this same period. The main source of hydrology at the FNW - West site is a seasonal high water table and occasional overbank flooding from East Spring Coulee and Big Porcupine Creek. Additional hydrology is provided by surface water from precipitation events.

Mitigation activities included excavation to lower the ground surface of uplands to match adjacent existing wetlands and the construction of a dike across two wetland/ephemeral swales along the lower end of the site (east side) to impound periodic surface water. High surface water flows at the site in 2013 breached a portion of the dike. MDT completed repairs on the structure in July 2013. This failure was repeated in 2014 when the fill placed across the swale was eroded to native elevation, exposing the gravel/cobble substrate along the ephemeral channel bed (PP 2, page C-2, Appendix C). Water was flowing through the breached berm at time of the June 20, 2014 site visit.

Inundation was observed across a majority of the excavated areas during the 2014 field survey. Additional evidence of site hydrology included saturation within 12 inches, sediment deposition, drainage patterns, surface soil cracks, iron deposits, water-stained leaves, drift deposits, and algal mat/crust. Some of the lower-lying depressions were inundated during the 2014 field visit. Approximately 60 percent of the wetlands on site were inundated to an average depth of 0.5 feet during the 2014 field survey, a notable increase since 2013.

Four data points were assessed to determine the upland and wetland boundaries (Wetland Data Forms, Appendix B). Data point We-1w was located in an excavated area near the creek that met the wetland criteria. Positive indicators of wetland hydrology at We-1w included two inches of surface water, saturation to the ground surface, water marks, drift deposits, and drainage patterns. The remaining data points, We-1u, We-2u, and We-3u, were located in upland areas at the edge of the wetland limits. Test pit We-1u was located near the failed dike, in an area classified as upland based on the lack of sufficient duration of wetland hydrology. The wetland boundary may extend into this area once the dike is functioning as designed. Surface soil cracks provided a single secondary indicator of wetland hydrology. Data point We-2u met the hydrology criteria with two secondary indicators, surface soil cracks and drainage patterns. The data

point did not meet the criteria for plants or soil. Test pit We-3u appeared to be flooded infrequently. The groundwater table appeared to be over three feet below the ground surface during the 2014 survey based on the level of surface water observed within the nearby swale. The sparsely vegetated concave surface was a single secondary indicator of wetland hydrology.

### 3.1.2. Vegetation

Fifty-seven plant species were identified during the 2013 and 2014 monitoring seasons (Table 3). The mitigation area contains several mature eastern cottonwoods (*Populus deltoides*) near the center of the site and a few large peach-leaf willows (*Salix amygdaloides*) along the undisturbed existing wetland swales. Several hundred cottonwood seedlings had germinated along the apparent edge of inundation in 2013. Greasewood (*Sarcobatus vermiculatus*) was present within the undisturbed uplands on the site. Four vegetation communities were mapped across the site in 2013 and 2014. In general, the communities can be classified as undisturbed wetland, disturbed (recently constructed) wetland, undisturbed upland, and disturbed upland. The four community types were upland Type 1 – *Bromus tectorum/Sarcobatus vermiculatus*, upland Type 2 – *Helianthus annuus/Bassia scoparia*, wetland Type 3 – *Spartina pectinata/Eleocharis palustris*, and wetland Type 4 – *Eleocharis palustris/Chenopodium album*. The species composition for each community is included on the Monitoring Form (Appendix B) and discussed below. Vegetation community boundaries are shown in Figure 4 of Appendix A.

Upland community Type 1 – *Bromus tectorum/Sarcobatus vermiculatus* was located on 5.34 acres of undisturbed upland that surrounds the site. In general, the community was located beside the road grade along the northeast border of the site and the side slope of the railroad grade along the southwest boundary. Thirty-eight species were identified within the community. Dominant components within this community included cheatgrass (*Bromus tectorum*), greasewood (*Sarcobatus vermiculatus*), lamb's quarters (*Chenopodium album*), intermediate wheatgrass (*Elymus hispidus*), field penny-cress (*Thlaspi arvense*), crested wheatgrass (*Agropyron cristatum*), false meadow rye (*Schedonrus pratensis*), common sunflower (*Helianthus annuus*), prickly lettuce (*Lactuca serriola*), and western wheatgrass (*Pascopyrum smithii*).

Upland community Type 2 – *Helianthus annuus/Bassia scoparia* was identified across 2.52 acres of upland disturbed during construction of the mitigation site. Although these areas were excavated to lower the elevation of the ground surface, positive wetland indicators within the community were not observed in 2014. The community was dominated by common sunflower and Mexican-fireweed (*Bassia scoparia*), lamb's quarters, and creeping wild rye (*Elymus repens*), with less percent cover of western wheatgrass, greasewood, American licorice (*Glycyrrhiza lepidota*), and fox-tail barley (*Hordeum jubatum*). The percentage of bare ground within this community decreased between 2013 and 2014 yet remained relatively high with a cover class of 21-50 percent.

**Table 3. Vegetation species observed in 2013 and 2014 for the FNW-West site.**

| Scientific Names                     | Common Names               | GP Indicator Status <sup>1</sup> |
|--------------------------------------|----------------------------|----------------------------------|
| <i>Agropyron cristatum</i>           | Crested Wheatgrass         | NL                               |
| <i>Alisma triviale</i>               | Northern Water-Plantain    | OBL                              |
| <i>Amaranthus retroflexus</i>        | Red-Root                   | FACU                             |
| <i>Ambrosia psilostachya</i>         | Perennial Ragweed          | FACU                             |

<sup>1</sup> 2014 NWPL (Lichvar et al., 2014)

New species identified in 2014 are **bolded**.

Wetland Type 3 – *Spartina pectinata*/*Eleocharis palustris* generally represent the undisturbed pre-existing wetlands within the monitoring area that cover approximately 1.08 acres. Two low-lying swales through the lower half of the site and a small area near the outlet of East Spring Coulee were mapped in this community type. Freshwater cord grass (*Spartina pectinata*), common spike-rush (*Eleocharis palustris*), broad-leaf cat-tail (*Typha latifolia*), American licorice, reed canary grass (*Phalaris arundinacea*), fox-tail barley, peach-leaf willow, Eastern cottonwood, curly dock (*Rumex crispus*), field sow-thistle (*Sonchus arvensis*), and seven other species were documented within community Type 3. Open water and bare ground each covered approximately 6 to 10 percent of the community in 2014.

Wetland Type 4 – *Eleocharis palustris*/*Chenopodium album* covers approximately 4.76 acres of the site that was recently disturbed during excavation. The community exhibited positive wetland indicators in 2013 and 2014. The extent of the wetland community increased by approximately 0.4 acre in 2014, corresponding to the decrease in the extent of upland Type 2 as wetland habitat continued to develop. Open water was noted on over 50 percent of the community in 2014 owing to seasonal high water level and recent precipitation. Bare ground was recorded at between 21 and 50 percent cover within this community. Only common spike-rush and lamb’s quarters were documented at 1 to 5 percent cover with twenty-two species, predominately hydrophytes, noted at trace levels throughout this community. Grand redstem (*Ammannia robusta*), an S2 species of concern (MTNHP) was recorded in community Type 4 in 2013. It

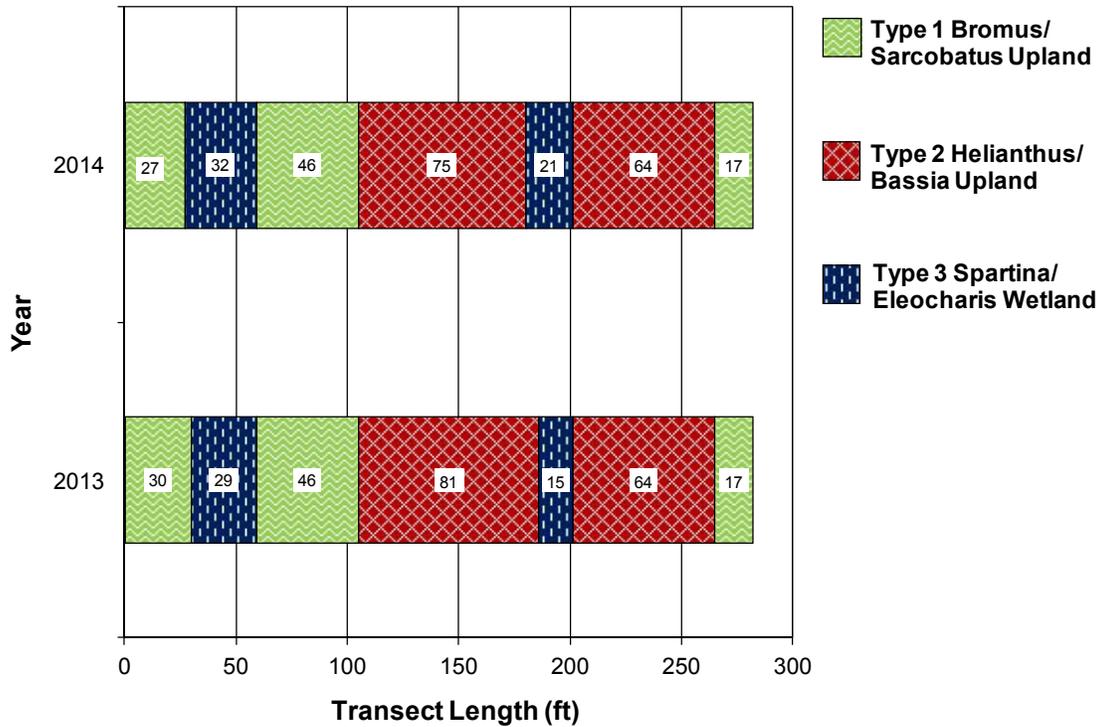

was not observed in 2014, possibly attributed to its occurrence in exposed mudflats as water draws down and may appear later in the growing season.

Two vegetation transect results are detailed on the Forsythe Northwest - West Monitoring Form (Appendix B) and summarized in tabular and graphic formats on Tables 4 and 5 and Charts 1 through 4, respectively. Photographs of the FNW - West transect end points are shown on pages C-4 through C-6 in Appendix C.

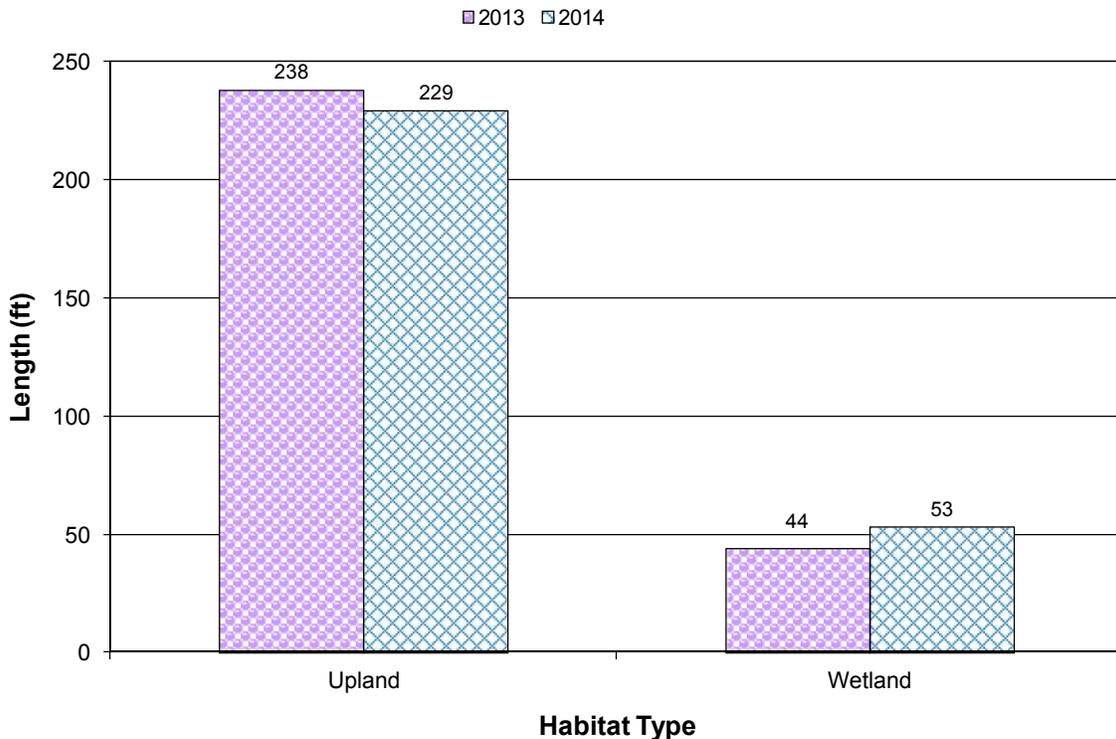

Vegetation Transect 1 is located in the east half of the site and is 282 feet in length. This transect began in the undisturbed uplands (Type 1) along the railroad grade, traversed across the two undisturbed existing wetland swales (Type 3) and disturbed upland areas (Type 2), and ended in upland Type 1 near Highway 12. Ten hydrophytic and 25 upland species were identified along the transect. Approximately 18.8 percent of this transect was located within wetland with the remaining 81.2 percent located in upland. The extent of wetlands on the transect increased by 3.2 percent in 2014. Wetland habitat is expected to continue to develop along this transect once the dike has been repaired and seasonal wetland hydrology can be established.

**Table 4. Transect 1 data summary for FNW-West Site in 2013 and 2014.**

| <b>Monitoring Year</b>  | <b>2013</b> | <b>2014</b> |
|---|-------------|-------------|
| <b>Transect Length (feet)</b>                                   | <b>282</b>  | <b>282</b>  |

**Chart 1. Transect 1 map for FNW-West Site showing vegetation types from transect start (0 feet) to finish (282 feet) for 2013 and 2014.**

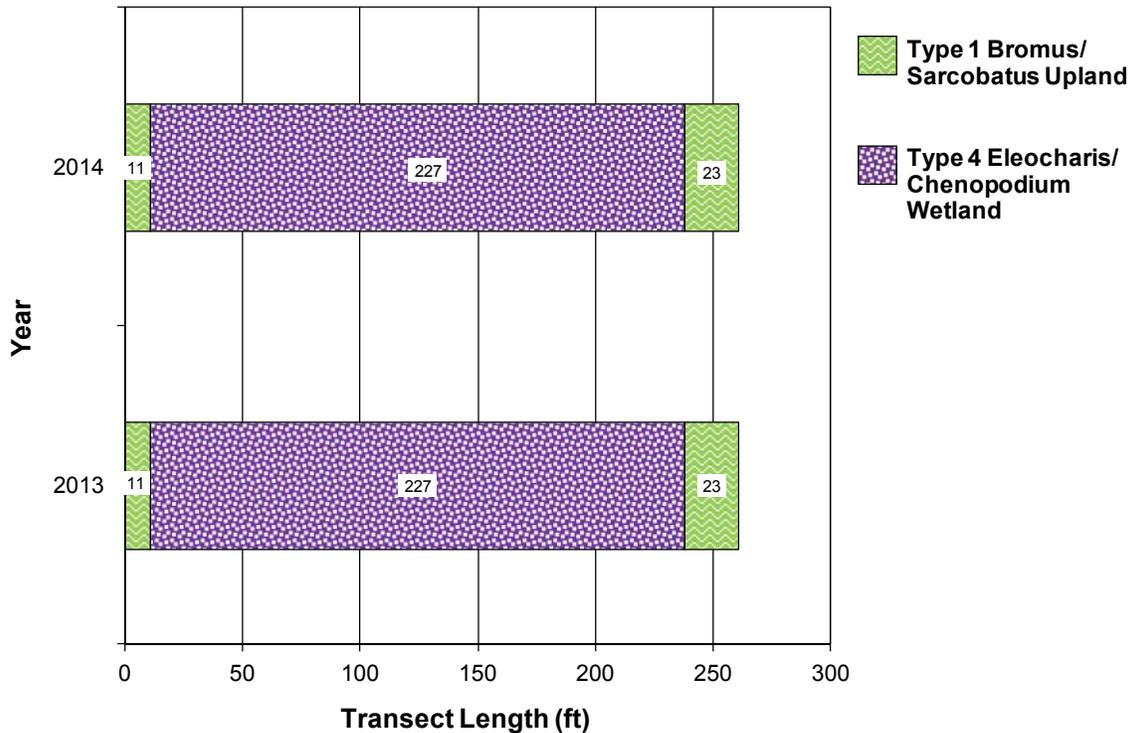

**Chart 2. Length of vegetation communities within Transect 1 at FNW-West Site for 2013 and 2014.**

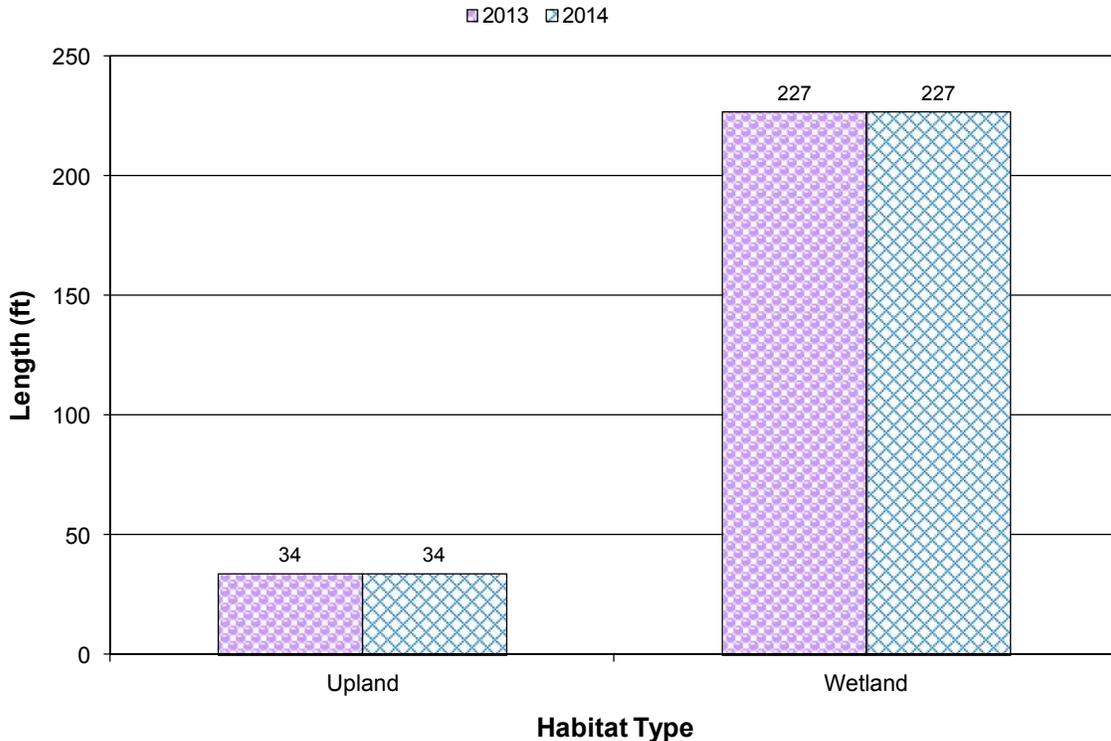

Similar to Transect 1, Transect 2 began in undisturbed upland community Type 1 near the RR grade and finished in community Type 1 along Highway 12. The majority of this transect crossed the disturbed wetland community Type 4. Although mapped as Type 4 – *Eleocharis/Chenopodium* wetland based on the presence of greater than 5 percent vegetation cover, approximately 80 percent of the 261-foot transect consisted of bare ground due to the recent excavation of the site. A total of 26 species, including 11 hydrophytes, were identified along Transect 2.

**Table 5. Transect 2 data summary for FNW-West Site for 2013 and 2014.**

| Monitoring Year   | 2013 | 2014 |
|---|------|------|

Infestations of four Priority 2B noxious weeds, including Canadian thistle (*Cirsium arvense*), leafy spurge (*Euphorbia esula*), field bindweed (*Convolvulus arvensis*), and saltcedar (*Tamarix* sp.), were mapped in five locations on Figure 4 (Appendix A). Canadian thistle was identified in one location in community Type 1 near the mature cottonwoods. The size of the infestation was less than 0.1 acre and the cover class was moderate (6 to 25 percent). Field bindweed was identified along the RR grade with a cover class of low (1 to 5 percent) and at an infestation size of less than 0.1 acre. The RR grade contained two infestations of leafy spurge that ranged from 0.1 to 1.0 acre in size with cover classes of low to moderate. A few sprigs of saltcedar were present at the mouth of East Spring Coulee at an infestation size of less than 0.1 acre and at 1 to 5 percent cover.

No containerized shrubs or trees were installed at this site. Revegetation efforts included a combination of wetland sod placement and seeding following construction disturbance. The seeding mixture included Dacotah switchgrass (*Panicum virgatum*), American mannagrass (*Glyceria grandis*), Baltic rush (*Juncus balticus*), Nebraska sedge (*Carex nebrascensis*), and Nuttall’s alkaligrass (*Puccinellia nuttalliana*). Woody species are regenerating naturally within the site. Several hundred cottonwood seedlings were observed within the recently excavated wetland areas in 2013. Although only moderate survival of these seedlings were noted (<25 percent), the living seedlings exhibited increased growth in both height and thickness.

### 3.1.3. Soil

Soils on the site were mapped in the *Rosebud County Soil Survey* as Borollic Camborthids-Ustic Torrfluvents complex (0 to 8 percent slope) in the northwest corner of the site and Marvan silty clay. (0 to 2 percent slope) throughout the majority of the mitigation area. The Borollic Camborthids-Ustic Torrfluvents complex and Marvan silty clay map units are located on the National Hydric Soil List (2012) and also on the Montana Hydric Soil list (USDA 2010). The Marvan series consist of very deep well drained light brownish gray clay mapped on alluvial fans, stream terraces, and drainageways.

Test pit We-1w was located at the margin of a recently excavated wetland in an area that met the hydric soil criteria. The soil profile revealed a gray (10YR 5/1) silty clay, with 3 percent, strong brown (7.5YR 5/6) concentrations in the matrix. The soil met the criteria for a depleted matrix (F3). The remaining three test pits were located in upland areas at the wetland margins. Test pit We-1u, located in an excavated area, exhibited a dark grayish brown (10YR 4/2) clay loam without redox features. Test pit We-2u was located in disturbed upland. The profile revealed a dark grayish brown (10YR 4/2) clay soil without redox features. Test pit We-3u was situated near the dike in an excavated area targeted for wetland expansion. The soil profile was brown (10 YR 5/3) clay with no redoximorphic characteristics. The units mapped for the site were generally confirmed by the test pit soils.

### 3.1.4. Wetland Delineation

Four data points were used to determine the wetland and upland boundaries in 2014 (FNW-West Figures 3 and 4, Appendix A). Vegetation, soil, and hydrology characteristics were documented on the Wetland Determination Data Forms (Appendix B). The total acreage of aquatic habitat at the West site (1) in 2014 was 5.85 acres, an increase of 0.41 wetland acres since 2013. This included approximately 1.29 acres of pre-existing wetland and 4.56 acres of created wetland within the recently excavated areas that have developed wetland characteristics in response to the decreased ground surface elevation. Water levels in the created wetlands support an establishing emergent plant community, although a majority of the disturbed area remains bare. Hydrophytic plants include common spike-rush, cottonwood, hard-stem club-rush (*Schoenoplectus acutus*), arum-leaf arrowhead (*Sagittaria cuneata*), and early-succession species like lamb’s quarters and fox-tail barley. The existing wetlands included the low-lying swales dominated by cordgrass, spike-rush, and cattail.

**Table 6. Wetland habitat acreages delineated at the FNW-West Site.**

| WETLAND AND UPLAND HABITATS | 2013 (acres) | 2014 (acres) |
|-----------------------------|--------------|--------------|
| Existing Wetland            | 1.29         | 1.29         |
| Created Wetland             | 4.15         | 4.56         |
| <b>Total</b>                | <b>5.44</b>  | <b>5.85</b>  |

### 3.1.5. Wildlife

A list of wildlife species observed directly or indirectly during the 2013 and 2014 field surveys is presented in Table 7 and the monitoring form (Appendix B). Twenty-two bird species were identified in 2014. The presence of large trees and mature sunflowers provide habitat for the diversity of birds observed at the site. Two white-tailed deer (*Odocoileus virginianus*) including a bedded fawn were observed near the cottonwood groves. The tracks of a porcupine (*Erethizon dorsatum*) and raccoon (*Procyon lotor*) were also noted in 2014. No nesting structures have been installed at the site.

**Table 7. Wildlife species observed at the FNW-West Site in 2013 and 2014.**

| COMMON NAME              | SCIENTIFIC NAME                        | COMMON NAME                                    | SCIENTIFIC NAME                      |

### 3.1.6. Functional Assessment

Results of the 2013 and 2014 functional assessments are summarized in Table 8. The completed FNW-West Wetland Assessment Form is included in Appendix B. The FNW-West site was evaluated as one assessment area (AA-1) that encompassed 5.85 acres in 2014. The AA was rated as a Category III wetland in 2014 with 67.5 percent of the total possible points. Ratings for general wildlife habitat, sediment/shoreline stabilization, production export/food chain support, and uniqueness increased from 2013 to 2014 as a result of less disturbance and higher vegetation cover. The site received a high rating for MTNHP Species habitat based on the presence of *Ammannia robusta* within the site. The site also received a high rating for short and long term surface water storage. The site achieved 37.7 functional units (FU) in 2014, 8.1 more than in 2013 reflecting the increase in wetland acreage and the decrease in site disturbance as vegetation cover develop. The rating and functional units are expected to continue to improve as the site recovers from the recent excavation and develops increased vegetation cover.

**Table 8. MWAM summary at the FNW-West Site in 2013 and 2014.**

| <b>Function and Value Parameters from the 2008 Montana Wetland Assessment Method</b> | <b>2013</b>      | <b>2014</b>      |
|--|------------------|------------------|

**3.1.7. Photo Documentation**

Photographs from photo points PP1 to PP5 (Figure 3, Appendix A), the transect endpoints, and wetland determination data points are shown on pages C-1 to C-7 of Appendix C.

**3.1.8. Maintenance Needs**

Infestations of four Priority 2B noxious weeds, including Canadian thistle (*Cirsium arvense*), leafy spurge (*Euphorbia esula*), field bindweed (*Convolvulus arvensis*), and saltcedar (*Tamarix* sp.), were mapped in five locations on Figure 4 (Appendix A). Canadian thistle was identified in one location in community Type 1 near the mature cottonwoods. The size of the infestation was less than 0.1 acre and the cover class was moderate (6 to 25 percent). Field bindweed was identified in one location within community 1 near the RR grade with a cover class of low (1 to 5 percent) and at an infestation size of less than 0.1 acre. The RR grade contained two infestations of leafy spurge that ranged from 0.1 to 1.0 acre in size with cover classes of low to moderate. A few sprigs of saltcedar were noted at the mouth of East Spring Coulee at an infestation size of less than 0.1 acre and at 1 to 5 percent cover. The MDT will use the annual monitoring results to determine weed control measures.

The dike failure that occurred at the site during high flows in 2013 was repaired by MDT prior to the 2013 field survey and was intact when inspected in 2013. However, the structure appeared to be inadequately stabilized and susceptible to future failure. An examination of this structure in June 2014 indicated that the structure did fail again during high spring flows, eroding a channel down to the

elevation of the original ephemeral thalweg. Photo point 2, shown on page C-2 of Appendix C, shows the repaired dike in 2013 and the failed dike following 2014 spring runoff. It is recommended the structure be redesigned and the upstream and downstream ends of the dike be reinforced with rip-rap and/or fabric for protection against future washouts based on the high volume of water that flows from the coulees at the west end of the site. A dike with reinforced spillway that functions to impound surface water during the spring would result in an increase of wetland habitat throughout the eastern part of the site. The fence around the perimeter of the monitoring areas was in good condition.

**3.1.9. Current Credit Summary**

Approximately 5.85 aquatic habitat acres consisting of approximately 1.29 acres of pre-existing wetland habitat and 4.56 acres of recently created wetlands were delineated in 2014. Approximately 7.86 acres of upland habitat was mapped on the site in 2014. Table 9 presents the calculated credit acres for individual mitigation types with appropriate credit ratios applied using the USACE crediting system. The FNW-West mitigation types and ratios included creation (1:1), preservation (4:1), and upland buffer (5:1). The credit acres accrued at the FNW-West site in 2014 totaled 6.45, 0.33 more credit acres than in 2013.

**Table 9. Credit summary for the FNW-West Site.**

| WETLAND           | Ratio | 2013 Delineated Acres | 2013 Estimated Credit Acres | 2014 Delineated Acres | 2014 Estimated Credit Acres |
|-------------------|-------|-----------------------|-----------------------------|-----------------------|-----------------------------|
| Preserved Wetland | 4:1   | 1.29                  | 0.32                        | 1.29                  | 0.32                        |
| Created Wetland   | 1:1   | 4.15                  | 4.15                        | 4.56                  | 4.56                        |
| Upland Buffer     | 5:1   | 8.27                  | 1.65                        | 7.86                  | 1.57                        |
| <b>TOTAL</b>      |       | <b>13.71</b>          | <b>6.13</b>                 | <b>13.71</b>          | <b>6.45</b>                 |

There were no quantitative performance measures or success criteria established for this wetland mitigation area. Monitoring requirements listed within the approved wetland mitigation plan are being satisfied. In general, the areas delineated as wetlands met the criteria for hydrophytic vegetation, hydric soil, and wetland hydrology. The overall estimated vegetation cover of hydrophytic species on the site was approximately 30 percent and was expected to increase. Noxious weed cover in 2014 was less than 10 percent site wide.

## 3.2. Middle Site – Site 2

### 3.2.1. Hydrology

The average total annual precipitation recorded at the Forsythe, Montana weather station (243098), from January 1975 to September 2014 was 14.48 inches (WRCC 2014). Total precipitation recorded at this station for 2012 was 7.81 inches, the driest year on record at this station. Total precipitation in 2013 totaled 19.47 inches and was the third wettest year on record at this station exceeding the average by five inches. The precipitation between January and August totaled 13.85 inches in 2013 and 15.63 in 2014, both of which exceeded the long-term average of 10.52 inches for this same period. The main source of hydrology at this mitigation site is precipitation, surface runoff from adjacent uplands, and shallow groundwater.

The site is situated near abandoned meander bends associated with Big Porcupine Creek that exhibit wetland characteristics and may experience occasional flooding during high flows in Big Porcupine Creek. Approximately 5 percent of the site's wetland area was inundated with a range of depths between 0 and 0.6 feet during the 2014 survey. Sediment and drift deposits, surface soil cracks, and drainage patterns in the newly excavated depression provided evidence of inundated conditions for an extended time period prior to the field survey. Additional hydrologic indicators noted site wide included inundation, saturation, and iron deposits. Only five percent of the site was inundated during the field survey.

Two data points, M-1w and M-1u, were assessed to determine the upland and wetland boundaries (Wetland Data Forms, Appendix B). Data point M-1w was located in an area of the excavated depression that met the wetland criteria. Hydrologic indicators at the data point included sediment deposits, surface soil cracks, a sparsely vegetated concave surface, and a positive FAC-Neutral test. Although data point M-1u exhibited surface soil cracks, it did not meet the wetland hydrology criteria requiring two secondary indicators.

### 3.2.2. Vegetation

A comprehensive list of the forty-four species identified onsite in 2013 and 2014 is presented in Table 10. Two community types were identified in 2013 and 2014, one upland and one wetland community type. The community types are upland Type 1 – *Pascopyrum smithii*/*Helianthus annuus* and wetland Type 2 – *Rumex crispus*/*Eleocharis palustris*. The vegetation community boundaries are shown on Figure 6 of Appendix A. The species composition for each community is discussed below and included on the Monitoring Form (Appendix B).

**Table 10. Vegetation species observed at the FNW-Middle Site in 2013 and 2014.**

| Scientific Names                    | Common Names                | GP Indicator Status <sup>1</sup> |
|-------------------------------------|-----------------------------|----------------------------------|
| <i>Alisma triviale</i>              | Northern Water-Plantain     | OBL                              |

<sup>1</sup> 2014 NWPL (Lichvar et al., 2014)

New species identified in 2014 are **bolded**.

Upland Type 1 - *Pascopyrum smithii*/*Helianthus annuus* represents the cover on the upland surrounding the excavated depression and along Highway 12 within the monitoring boundary. The 1.31-acre community included a dominance of western wheatgrass (*Pascopyrum smithii*), common sunflower (*Helianthus annuus*), yellow sweet-clover (*Melilotus officinalis*), and cheatgrass (*Bromus tectorum*). Other common components of this vegetation community included creeping wild rye (*Elymus repens*) lamb's-quarters (*Chenopodium album*), Mexican-fireweed (*Bassia scoparia*), curly dock (*Rumex crispus*), and field penny-cress (*Thlaspi arvense*). Woody plants included prairie rose (*Rosa arkansana*), greasewood (*Sarcobatus vermiculatus*), common snowberry (*Symphoricarpos albus*), and Eastern cottonwood (*Populus deltoides*).

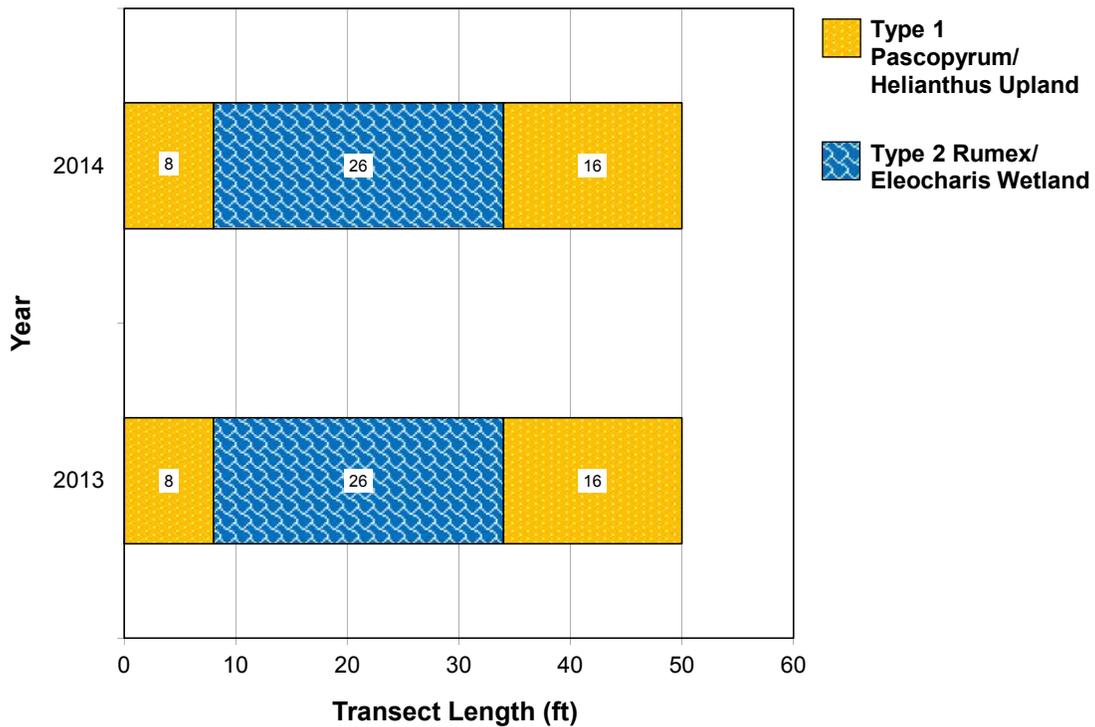

Wetland Type 2 - *Rumex crispus*/*Eleocharis palustris* was identified on 0.49 acres within the excavated depression. Bare ground was recorded at greater than 50 percent of total cover. Common species included curly dock, common spikerush (*Eleocharis palustris*), American manna grass (*Glyceria grandis*), common sunflower and Mexican-fireweed. Twenty species were identified in the community including hydrophytes such as northern water-plantain (*Alisma trivale*), large barnyard grass (*Echinochloa crus-galli*), Eastern cottonwood (*Populus deltoides*), peachleaf willow (*Salix amygdaloides*), saltmarsh club-rush (*Schoenoplectus maritimus*), and broad-leaf cat-tail (*Typha latifolia*).

One vegetation transect was established at the site that runs perpendicular to the linear excavated wetland. The transect began at a fence post along the northeast boundary of the site, followed an azimuth of 205 degrees for 50 feet, then ended at an existing cottonwood. The transect traversed both communities for the same distance in 2013 and 2014. A total of 20 species were identified on the transect including eight hydrophytes and 12 upland species. Fifty-two percent of the transect was located in wetland habitat. Approximately 50 percent of the transect is unvegetated bare ground, a consequence of the recent disturbance. Vegetation transect results are detailed on the FNW-Middle Monitoring Form (Appendix B) and are summarized in Table 11 and Charts 5 and 6. Photos of the transect end points are provided in Appendix C.

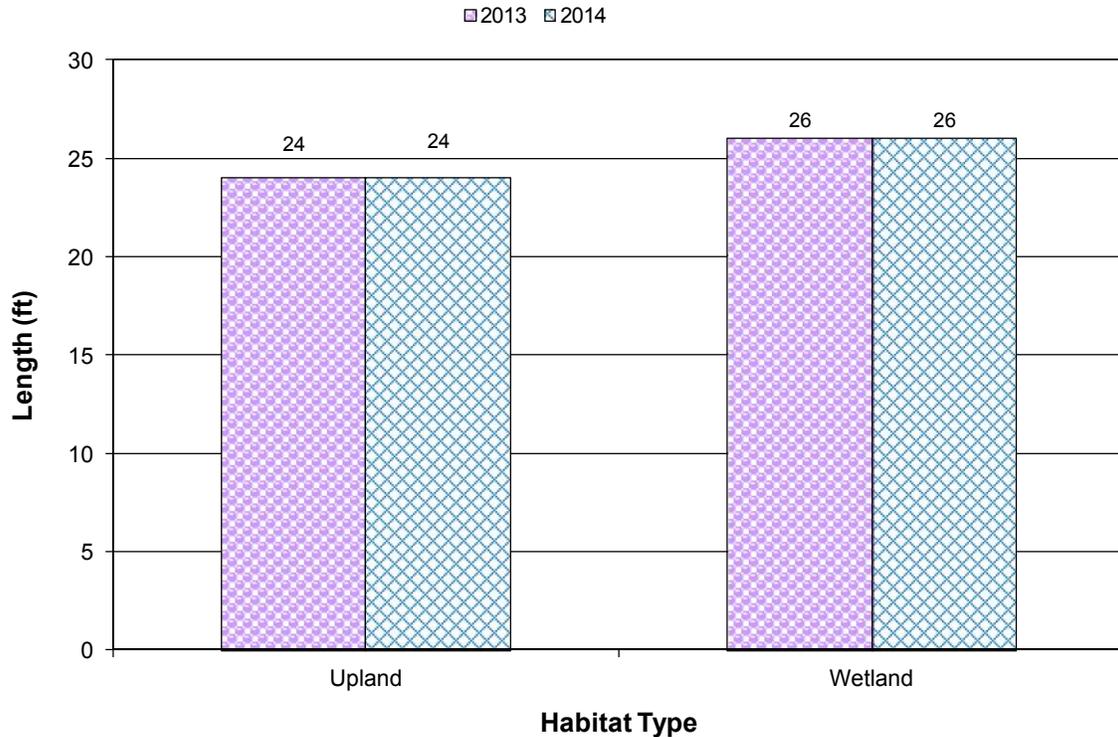

One Montana-listed noxious weed was identified at the site and included a small area (<0.1-acre) of field bindweed in the western end of the site. No woody vegetation was installed within the mitigation wetland. Revegetation efforts at the site included seeding a mixture of Dacotah switchgrass (*Panicum virgatum*), American mannagrass (*Glyceria grandis*), Baltic rush (*Juncus balticus*), Nebraska sedge (*Carex nebrascensis*), and Nuttall's alkaligrass (*Puccinellia nuttalliana*) following construction disturbance. Several hundred cottonwood seedlings were observed along the margin of the wetland at the apparent edge of early-season inundation during the 2013 field survey. A relatively high percentage of these seedlings were still living during the 2014 site visit.

**Table 11. Transect 1 data summary for FNW-Middle Site in 2013 and 2014.**

| Monitoring Year   | 2013      | 2014      |
|---|-----------|-----------|
| <b>Transect Length (feet)</b>                                   | <b>50</b> | <b>50</b> |
| Vegetation Community Transitions along Transect                 | 2         | 2         |
| Vegetation Communities along Transect                           | 2         | 2         |
| Hydrophytic Vegetation Communities along Transect               | 1         | 1         |
| Total Vegetative Species  | 16        | 20        |
| Total Hydrophytic Species                                       | 6         | 8         |
| Total Upland Species  | 10        | 12        |
| Estimated % Total Vegetative Cover                              | 40        | 50        |
| Estimated % Unvegetated   | 60        | 50        |
| % Transect Length Comprising Hydrophytic Vegetation Communities | 52.0      | 52.0      |
| % Transect Length Comprising Upland Vegetation Communities      | 48.0      | 48.0      |

| % Transect Length Comprising Mudflat                            | 0         | 0         |

**Chart 5. Transect 1 map for FNW-Middle Site showing vegetation types from transect start (0 feet) to finish (50 feet) in 2013 and 2014.**

**Chart 6. Length of vegetation communities within Transect 1 at FNW-Middle Site in 2013 and 2014.**

**3.2.3. Soil**

Soils at the FNW-Middle site were mapped as Harlem silty clay found on 0 to 2 percent slopes. These very deep well-drained soils are seen on floodplains and are occasionally flooded. This map series is identified on the Montana Hydric Soils List.

Two test pits were examined to determine hydric soil parameters. Test pit M-1w was located in the excavated depression in an area that met the three wetland criteria. The soil profile revealed grayish brown (10YR 5/2) clay with dark yellowish brown (10YR 4/6) redoximorphic concentrations in the matrix. The depleted matrix within 12 inches of the soil surface was a positive indicator of hydric soils. The soil in upland test pit M-1u was brown (10YR 5/3) clay without redox concentrations within the upper 12 inches of the profile. Although the soil in the test pit was not hydric, it appeared to be near the seasonal high water table based on the presence of five percent sodic concentrations (10 YR 7/1).

**3.2.4. Wetland Delineation**

Two data points (Figure 6, Appendix A) were used to determine the upland and wetland boundaries. The FNW-Middle Wetland Determination Data Forms are included in Appendix B and the wetland boundaries are shown on Figure 6 (Appendix A). The total aquatic habitat developed to date within the 1.8-acre project area was 0.49 acres (Table 12). The floor of the excavated depression was identified as wetland based on the presence of positive wetland hydrology

indicators, hydric soil, and the predominance of hydrophytic species. The wetland boundary may extend slightly up the side slopes of the excavated basin in subsequent growing seasons based on the hydrological indicators (seasonal inundation) observed during the field review.

**Table 12. Wetland/upland habitat acreages delineated at the FNW-Middle Site in 2013 and 2014.**

| WETLAND AND UPLAND HABITATS | 2013<br>(acres) | 2014<br>(acres) |
|-----------------------------|-----------------|-----------------|
| Project Area                | 1.80            | 1.80            |
| Created Wetland             | 0.49            | 0.49            |
| Upland Buffer               | 1.31            | 1.31            |

**3.2.5. Wildlife**

A list of wildlife species observed directly and indirectly during the 2013 and 2014 field survey is shown in Table 13 (Monitoring Form, Appendix B). Six bird species, including an Eastern kingbird (*Tyrannus tyrannus*), common nighthawk (*Chordeiles minor*), and a turkey vulture (*Cathartes aura*) were identified within or flying over the mitigation site. The tracks of a raccoon (*Procyon lotor*) were identified in the mud.

**Table 13. Wildlife species observed at the FNW-Middle Site in 2013 and 2014.**

| COMMON NAME               | SCIENTIFIC NAME                   |
|---------------------------|-----------------------------------|
| <b>AMPHIBIANS</b>         |                                   |
| Frog sp.                  |                                   |
| <b>BIRDS</b>              |                                   |
| American Goldfinch        | <i>Spinus tristis</i>             |
| <b>Common Nighthawk</b>   | <b><i>Chordeiles minor</i></b>    |

| <b>Eastern Kingbird</b>   | <b><i>Tyrannus tyrannus</i></b>   |
| Killdeer                  | <i>Charadrius vociferus</i>       |
| <b>Mourning Dove</b>      | <b><i>Zenaida macroura</i></b>    |
| <b>Turkey Vulture</b>     | <b><i>Cathartes aura</i></b>      |
| <b>Western Kingbird</b>   | <b><i>Tyrannus verticalis</i></b> |
| <b>Western Meadowlark</b> | <b><i>Sturnella neglecta</i></b>  |
| <b>MAMMALS</b>            |                                   |
| Coyote                    | <i>Canis latrans</i>              |
| Deer Sp.                  | <i>Odocoileus sp.</i>             |
| <b>Raccoon</b>            | <b><i>Procyon lotor</i></b>       |
| <b>REPTILES</b>           |                                   |
| Plains Gartersnake        | <i>Thamnophis radix</i>           |

Species identified in 2014 are **bolded**.

### 3.2.6. Functional Assessment

Results of the 2013 and 2014 functional assessments are summarized in Table 14. The completed FNW-Middle Wetland Assessment Form is provided in Appendix B. The FNW-West site was evaluated as one assessment area and encompassed 0.49 acres. The prominent factor adversely impacting the overall score and functional units at the site in 2013 was the general condition of the AA including high disturbance, high percentage of bare ground, low vegetation cover, and low quality of wildlife habitat. The disturbance rating went from high to moderate in 2014 based on the increased vegetation cover in disturbed areas. The S2 species of concern grand redstem was documented growing within the constructed wetland in 2013 and provided a high MTNHP rating. The flood attenuation rating was modified based on lack of connection to Big Porcupine Creek. This site achieved 47.8 percent of the possible score and a total of 2.1 functional units in 2014. The score rose 4.5 percentage points from 2013 to 2014 as a result of increases in the General Wildlife Habitat, Production Export/Food Chain Support, and Uniqueness functions. The disturbance rating is factored into the scoring of these functions. Development of the vegetation cover may result in an improved rating from a Category III wetland to a Category II wetland long term, although the small size of the AA will limit the total score.

**Table 14. MWAM summary at the FNW-Middle Site for 2013 and 2014.**

| Function and Value Parameters from the 2008 Montana Wetland Assessment Method | 2013           | 2014           |
|---|----------------|----------------|
| Listed/Proposed T&E Species Habitat   | Low (0.0)      | Low (0.0)      |
| MTNHP Species Habitat   | High (0.9)     | High (0.9)     |

### 3.2.7. Photo Documentation

Photographs of photo points PP1 and PP2 are shown on page C-8 in Appendix C. The vegetation transect endpoints and wetland determination data points (Figure 5, Appendix A) are shown on pages C-9 and C-10.

**3.2.8. Maintenance Needs**

One Montana-listed noxious weed, field bindweed (*Convolvulus arvensis*), was identified at this site in 2014 near the western boundary and should be controlled to prevent spread and colonization. The fence along the mitigation area was in good-working order. There were no man-made water control structures or bird boxes installed at this site.

**3.2.9. Current Credit Summary**

Table 15 shows the total delineated acres and credit acres estimated for the FNW-Middle site in 2013 and 2014. The 2014 wetland delineation identified 0.49 acres of created emergent wetlands and 1.31 acres of upland buffer, the same acreages identified in 2013. The site accrued 0.75 estimated credit acres in 2014. There are no performance standards identified for this site. One noxious weed was identified within the mitigation site boundaries yet exhibited very low percent areal cover (<1%). The percent cover of native hydrophytes was low although the overall cover increased slightly from 2013 to 2014. The cover of wetland vegetation will increase as favorable wetland conditions persist and as the site recovers from 2012 construction.

**Table 15. Credit summary at the FNW-Middle Site in 2013 and 2014.**

| Habitat Type    | Mitigation Ratio | 2013 Delineated Acres | 2013 Estimated Credit Acres | 2014 Delineated Acres | 2014 Estimated Credit Acres |
|-----------------|------------------|-----------------------|-----------------------------|-----------------------|-----------------------------|
| Created Wetland | 1:1              | 0.49                  | 0.49                        | 0.49                  | 0.49                        |
| Upland Buffer   | 5:1              | 1.31                  | 0.26                        | 1.31                  | 0.26                        |
| <b>Total</b>    |                  | <b>1.80</b>           | <b>0.75</b>                 | <b>1.80</b>           | <b>0.75</b>                 |

### 3.3. East Site – Site 3

#### 3.3.1. Hydrology

The average total annual precipitation recorded at the Forsythe, Montana weather station (243098), from January 1975 to September 2014 was 14.48 inches (WRCC 2014). Total precipitation recorded at this station for 2012 was 7.81 inches, the driest year on record at this station. Total precipitation in 2013 totaled 19.47 inches and was the third wettest year on record at this station exceeding the average by five inches.

This site is very similar to the FNW-Middle site. The main sources of hydrology at this FNW-East are shallow groundwater, direct precipitation, and surface runoff from adjacent uplands. Old meander scars of Big Porcupine Creek with relic and contemporary wetland characteristics are located directly adjacent to the site. The newly excavated depression supported signs of inundation persisting for an extended period prior to the field survey. Positive hydrologic indicators observed at this site included inundation, saturation, water marks, water-stained leaves, hydrogen sulfide odor, algal mat/crust, surface soil cracks, concave surface, geomorphic position, and iron deposits. Approximately 5% of the site was inundated at the time of the 2014 field survey.

Two data points, Ea-1w and Ea-1u, were assessed to determine the upland and wetland boundaries (Wetland Data Forms, Appendix B). Data point Ea-1w was located within an area that met the wetland criteria. Positive indicators of wetland hydrology at this data point included drift deposits, surface soil cracks, and sparsely vegetated concave surface. No signs of wetland hydrology were observed at Ea-1u, located along the side slope of the excavated basin above the seasonal saturation zone of the impounded water.

#### 3.3.2. Vegetation

A comprehensive list of forty-one species compiled during the 2013 and 2014 field surveys of FNW-East is presented in Table 16. Two community types were identified and mapped at this site in 2014 (Figure 8, Appendix A) and included upland Type 1 – *Helianthus annuus/Thlaspi arvense* and wetland Type 2 – *Rumex crispus/Eleocharis palustris*. The species composition is detailed by type on the FNW-East Monitoring Form (Appendix B) and discussed below.

**Table 16. Vegetation species observed at the FNW-East Site in 2013 and 2014.**

| Scientific Names                    | Common Names                | GP Indicator Status <sup>1</sup> |
|-------------------------------------|-----------------------------|----------------------------------|
| <i>Agropyron cristatum</i>          | Crested Wheatgrass          | NL                               |
| <b>Algae, green</b>                 | <b>Algae, green</b>         | <b>NL</b>                        |
| <i>Alisma triviale</i>              | Northern Water-Plantain     | OBL                              |
| <b><i>Alopecurus pratensis</i></b>  | <b>Field Meadow-Foxtail</b> | <b>FACW</b>                      |
| <i>Ambrosia psilostachya</i>        | Perennial Ragweed           | FACU                             |
| <i>Ammannia robusta</i>             | Grand Redstem               | OBL                              |
| <i>Bassia scoparia</i>              | Mexican-Fireweed            | FACU                             |
| <i>Bromus carinatus</i>             | California Brome            | NL                               |
| <i>Bromus tectorum</i>              | Cheatgrass                  | NL                               |
| <i>Chenopodium album</i>            | Lamb's-Quarters             | FACU                             |
| <b><i>Convolvulus arvensis</i></b>  | <b>Field Bindweed</b>       | <b>NL</b>                        |
| <i>Echinochloa crus-galli</i>       | Large Barnyard Grass        | FAC                              |
| <i>Eleocharis palustris</i>         | Common Spike-Rush           | OBL                              |
| <b><i>Elymus repens</i></b>         | <b>Creeping Wild Rye</b>    | <b>FACU</b>                      |
| <i>Elymus sp.</i>                   | Wild Rye                    | NL                               |
| <b><i>Glyceria elata</i></b>        | <b>Tall Manna Grass</b>     | <b>OBL</b>                       |
| <i>Helianthus annuus</i>            | Common Sunflower            | FACU                             |
| <b><i>Hesperostipa comata</i></b>   | <b>Needle-and-Thread</b>    | <b>NL</b>                        |
| <i>Hordeum jubatum</i>              | Fox-Tail Barley             | FACW                             |
| <i>Lactuca serriola</i>             | Prickly Lettuce             | FAC                              |
| <i>Lepidium perfoliatum</i>         | Clasping Pepperwort         | FAC                              |
| <b><i>Linum lewisii</i></b>         | <b>Prairie Flax</b>         | <b>NL</b>                        |

| <b><i>Taraxacum officinale</i></b>  | <b>Common Dandelion</b>     | <b>FACU</b>                      |
| <i>Thlaspi arvense</i>              | Field Pennycress            | FACU                             |
| <b><i>Tragopogon dubius</i></b>     | <b>Meadow Goat's-beard</b>  | <b>NL</b>                        |
| <i>Typha latifolia</i>              | Broad-Leaf Cat-Tail         | OBL                              |

<sup>1</sup> 2014 NWPL (Lichvar et al., 2014)

New species identified in 2014 are **bolded**.

Upland Type 1 – *Helianthus annuus/Thlaspi arvense* represented the upland areas surrounding the excavated wetland. This 1.55-acre community is represented by upland species common to roadsides and recently disturbed sites and includes common sunflower, field penny-cress, yellow sweet-clover, crested wheatgrass (*Agropyron cristatum*), lamb's-quarters, western wheatgrass, curly dock, perennial ragweed (*Ambrosia psilostachya*), cheatgrass, fox-tail barley, and clasping pepperweed (*Lepidium perfoliatum*). Buffalobur nightshade (*Solanum rostratum*) was identified in the upland community in 2013 but was not seen during the 2014 survey.

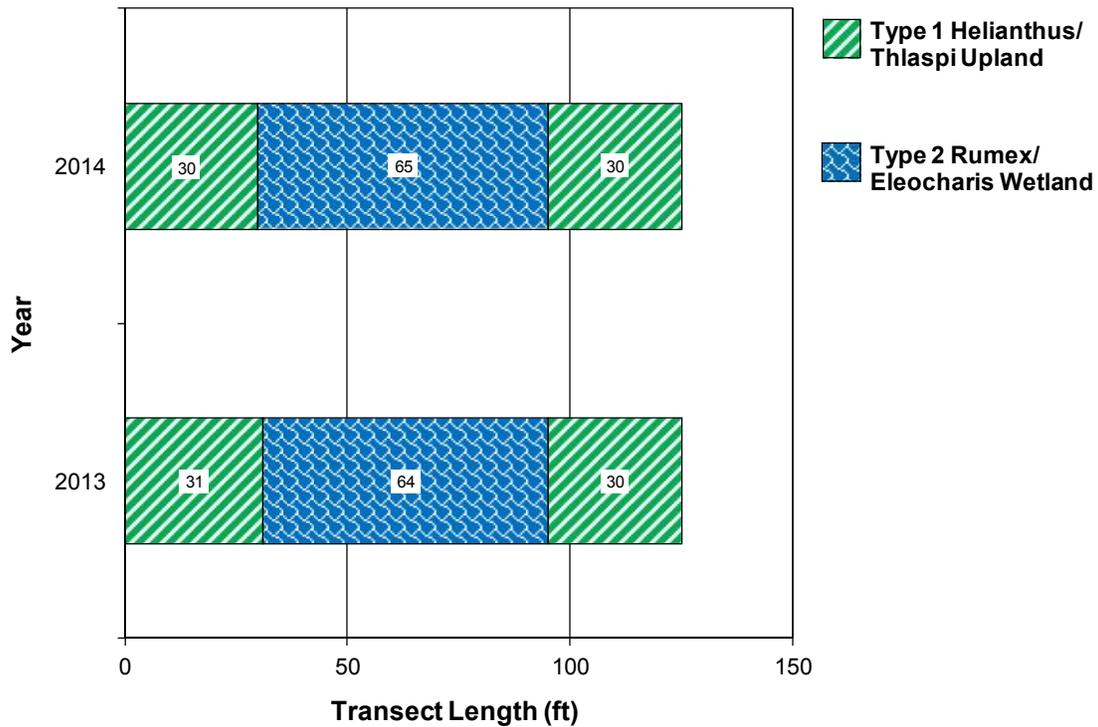

Wetland Type 2 - *Rumex crispus/Eleocharis palustris* was mapped within the 1.19-acre excavated depression. This community was characterized by an increase of hydrophytic vegetation in 2014 from a mostly bare basin with pockets of standing water in 2013. Curly dock, an early-succession facultative plant, was recorded at a cover class of 21 to 50 percent. Common spikerush, large barnyard grass, yard knotweed (*Polygonum aviculare*), saltmarsh clubrush (*Schoenoplectus maritimus*), and broad-leaf cat-tail were identified within this community. Grand redstem (*Ammannia robusta*) was also identified at trace amounts in the wetland community at FNW-East in 2013 but not observed in 2014. Several cottonwood seedlings were observed throughout this wetland in 2013 with a modest proportion of survival noted in 2014. Seedlings of various willows (*Salix exigua* and *Salix amygdaloides*) were also present within this community in 2014.

Two vegetation transects were established, one on each end of the FNW-East site. Vegetation results for Transects 1 and 2 are detailed on the FNW-East Monitoring Form (Figure 7, Appendix B) and summarized in Tables 17 and 18 and Charts 7 through 10. Photographs of the transect end points are shown on pages C-11 to C-13 in Appendix C.

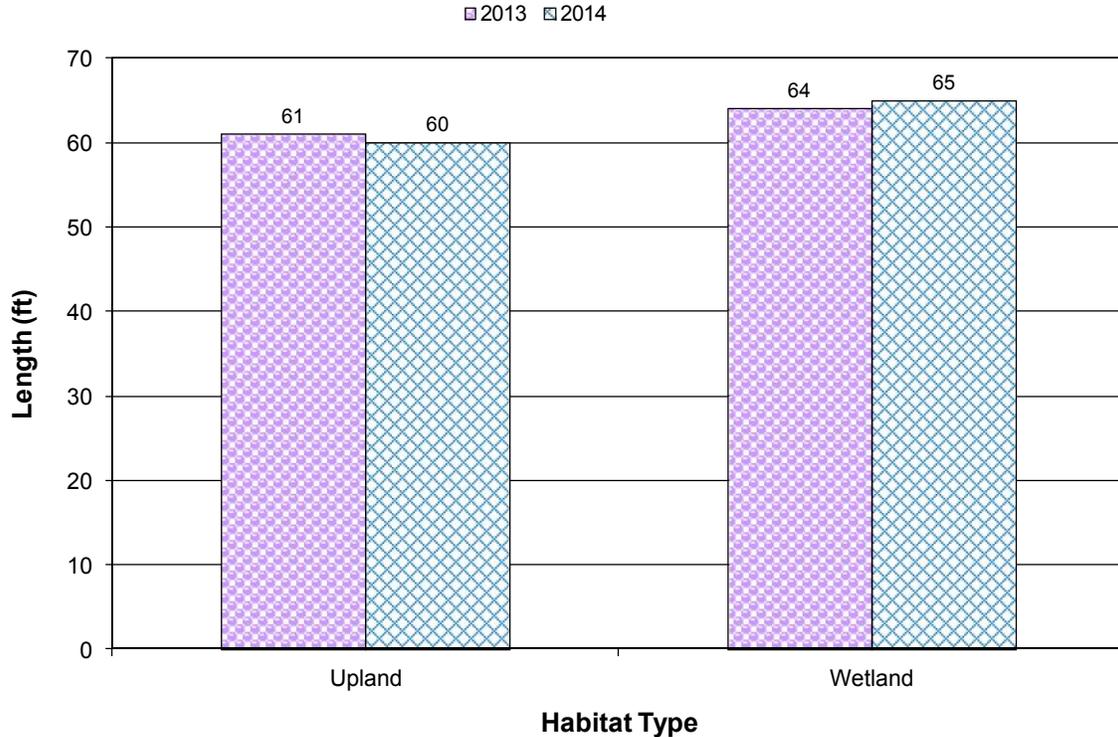

Transect 1 is located at the northwest end of the site. This transect began at the fenced boundary in upland Type 1, crossed wetland Type 2 community at a skew, and terminated in upland Type 1 (Chart 7). Twenty-four species, including seven hydrophytes and seventeen upland species, were identified along this 125-foot transect in 2014, an increase of eight species since 2013. Wetland habitat along this transect is not expected to increase considerably due to the distinct topographic break defining the wetland boundary.

**Table 17. Transect 1 data summary at FNW-East Site in 2013 and 2014.**

| Monitoring Year   | 2013       | 2014       |
|---|------------|------------|
| <b>Transect Length (feet)</b>                                   | <b>125</b> | <b>125</b> |
| Vegetation Community Transitions along Transect                 | 2          | 2          |
| Vegetation Communities along Transect                           | 2          | 2          |
| Hydrophytic Vegetation Communities along Transect               | 1          | 1          |
| Total Vegetative Species  | 16         | 24         |
| Total Hydrophytic Species                                       | 5          | 7          |
| Total Upland Species  | 11         | 17         |
| Estimated % Total Vegetative Cover                              | 40         | 40         |
| Estimated % Unvegetated   | 60         | 60         |
| % Transect Length Comprising Hydrophytic Vegetation Communities | 51.2       | 52         |
| % Transect Length Comprising Upland Vegetation Communities      | 48.8       | 48         |
| % Transect Length Comprising Unvegetated Open Water             | 0.0        | 0          |
| % Transect Length Comprising Mudflat                            | 0          | 0          |

**Chart 7. Transect 1 map for FNW-East Site showing vegetation types from transect start (0 feet) to finish (125 feet) in 2013 and 2014.**

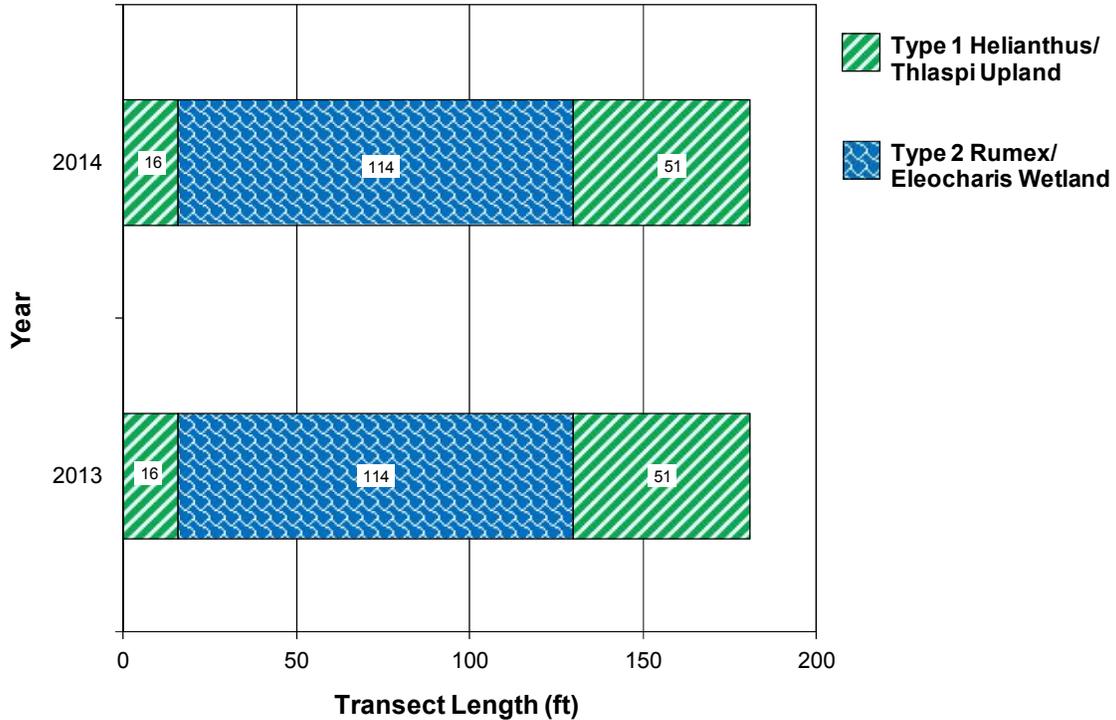

**Chart 8. Length of vegetation communities within Transect 1 for FNW-East Site in 2013 and 2014.**

Transect 2 is very similar to T-1. This one begins in the southeast corner of the site in upland Type 1, crosses through wetland Type 2, and terminates in upland Type 1. A total of 24 species, including nine hydrophytes and fifteen upland species, were found along this 181-foot transect. An increase of vegetative cover from 40 percent in 2013 to 55 percent in 2014 was documented along the transect and primarily included increased vegetation development within the wetland Type 2 *Rumex/Eleocharis* community following construction.

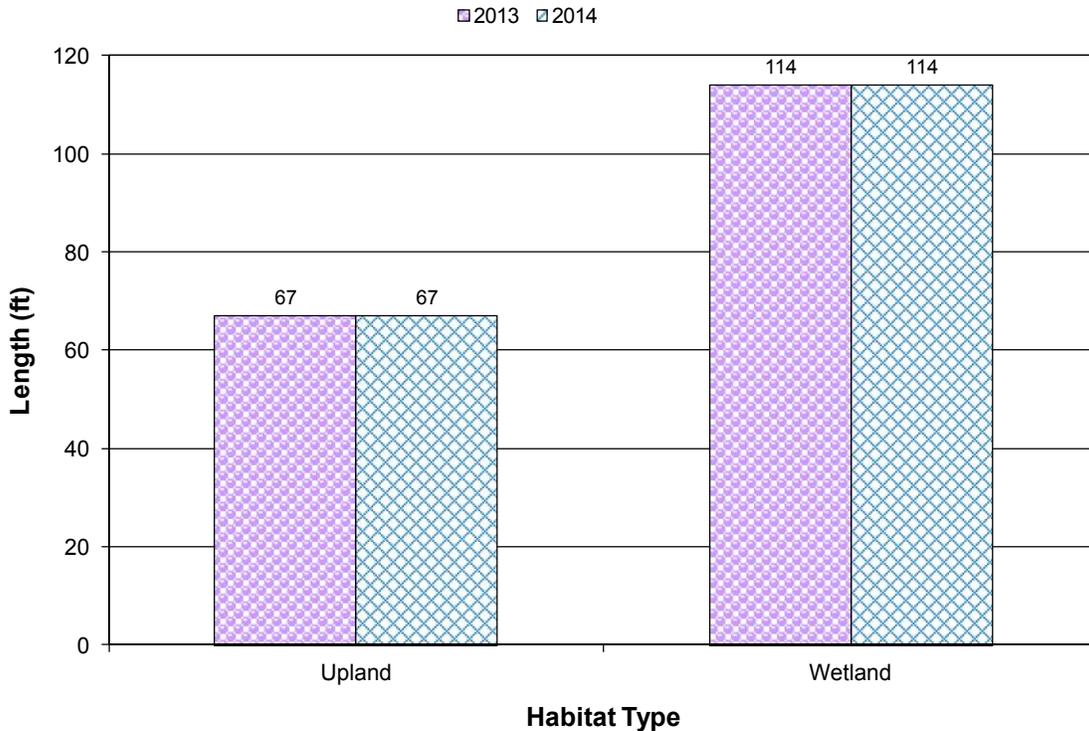

**Table 18. Transect 2 data summary for FNW-East Site in 2013 and 2014.**

| Monitoring Year   | 2013       | 2014       |
|---|------------|------------|
| <b>Transect Length (feet)</b>                                   | <b>181</b> | <b>181</b> |
| Vegetation Community Transitions along Transect                 | 2          | 2          |
| Vegetation Communities along Transect                           | 2          | 2          |
| Hydrophytic Vegetation Communities along Transect               | 1          | 1          |
| Total Vegetative Species  | 12         | 24         |
| Total Hydrophytic Species                                       | 5          | 9          |

| % Transect Length Comprising Mudflat                            | 0          | 0          |

**Chart 9. Transect 2 map for FNW-East Site showing vegetation types from transect start (0 feet) to finish (181 feet) in 2013 and 2014.**

**Chart 10. Length of vegetation communities within Transect 2 for FNW-East Site in 2013 and 2014.**

One Montana-listed noxious weed was identified at this site and included two small locations of field bindweed. The site was seeded following construction and has displayed increased hydrophytic vegetation development within the constructed basin. No woody plants were installed at FNW-East. Mature cottonwoods and willows in the area appear to be providing natural regeneration of cottonwoods and willows as seedlings of both genera were documented within the wetland community.

**3.3.3. Soil**

Soils at the FNW-Middle site were mapped as Harlem silty clay, 0 to 2 percent slope. These very deep well drained soils are on floodplains and occasionally flooded. This map series is identified on the Montana Hydric Soils List.

Two test pits were examined to determine hydric soil parameters. Test pit Ea-1w was located in an area that met the three wetland criteria. The soil profile revealed a grayish brown (10YR 5/2) clay with dark yellowish brown (10YR4/4) redox concentrations in the matrix. This soil pit qualified as hydric due to the depleted matrix. Data point Ea-1u was located in the adjacent uplands. The soil profile revealed a brown (10YR 5/3) clay with light gray (10YR 7/1) mottles. This profile did not qualify as hydric. Hydric soils throughout the floor of the excavated basin are expected to continue to develop with time.

**3.3.4. Wetland Delineation**

Two data points were evaluated in 2014 to determine the wetland boundary at the site (Wetland Determination Data Forms, Appendix B). The surveyed boundaries are shown on Figure 8 in Appendix A. Same as in 2013, the 2014 delineation identified 1.19 acres of wetland and 1.55 acres of upland buffer (Table 19) within the project boundaries. Wetland acreage is not expected to increase much due to the abrupt topographical break at the wetland edge.

**Table 19. Wetland/upland habitat acreages delineated at the FNW-East Site in 2013 and 2014.**

| WETLAND AND UPLAND HABITATS | 2013 (acres) | 2014 (acres) |
|-----------------------------|--------------|--------------|
| Project Area                | 2.74         | 2.74         |
| Created Wetland             | 1.19         | 1.19         |
| Upland Buffer               | 1.55         | 1.55         |

**3.3.5. Wildlife**

A list of wildlife species observed directly and indirectly at the site during the field survey in 2013 and 2014 is presented in Table 20. Twelve bird species were observed within of directly over the mitigation site in 2014 and included cliff and barn swallows, common nighthawk, western kingbird, eastern kingbird, killdeer, lark sparrow, mourning dove, red-winged blackbird, turkey vulture, western meadowlark, and western sandpiper. Tracks of raccoon were noted at this site.

**Table 20. Wildlife species observed at the FNW-East Site in 2013 and 2014.**

| COMMON NAME                 | SCIENTIFIC NAME                        |
|-----------------------------|--|
| <b>AMPHIBIANS</b>           |  |
| Northern Leopard Frog       | <i>Rana pipiens</i>                    |
| <b>MAMMALS</b>              |  |
| Coyote                      | <i>Canis latrans</i>                   |
| Deer Sp.                    | <i>Odocoileus sp.</i>                  |
| <b>Raccoon</b>              | <b><i>Procyon lotor</i></b>            |
| <b>BIRDS</b>                |  |
| American Goldfinch          | <i>Spinus tristis</i>                  |
| Bank Swallow                | <i>Riparia riparia</i>                 |
| <b>Barn Swallow</b>         | <b><i>Hirundo rustica</i></b>          |
| <b>Cliff Swallow</b>        | <b><i>Petrochelidon pyrrhonota</i></b> |
| <b>Common Nighthawk</b>     | <b><i>Chordeiles minor</i></b>         |
| <b>Eastern Kingbird</b>     | <b><i>Tyrannus tyrannus</i></b>        |
| <b>Killdeer</b>             | <b><i>Charadrius vociferus</i></b>     |
| <b>Lark Sparrow</b>         | <b><i>Chondestes grammacus</i></b>     |
| <b>Mourning Dove</b>        | <b><i>Zenaida macroura</i></b>         |
| <b>Red-winged Blackbird</b> | <b><i>Agelaius phoeniceus</i></b>      |
| <b>Turkey Vulture</b>       | <b><i>Cathartes aura</i></b>           |
| Vesper Sparrow              | <i>Pooecetes gramineus</i>             |
| <b>Western Kingbird</b>     | <b><i>Tyrannus verticalis</i></b>      |
| <b>Western Meadowlark</b>   | <b><i>Sturnella neglecta</i></b>       |
| <b>Western Sandpiper</b>    | <b><i>Calidris mauri</i></b>           |

Species identified in 2014 are **bolded**.

**3.3.6. Functional Assessment**

Results of the 2013 and 2014 functional assessment are summarized in Table 21. The completed 2014 Wetland Assessment Form is included in Appendix B. The total aquatic habitat developed to date within the 2.74-acre project area is 1.19 acres. The site was evaluated as one assessment area.

The AA was rated as a Category III wetland with 47.8 percent of the total possible points. The presence of the grand redstem (S2) in 2013 provided the site with a high rating for MTNHP species habitat. The disturbance rating improved from high in 2013 to moderate in 2014 and was the basis for the overall higher functional rating. The site achieved 5.1 functional units, an increase of 0.8 units since 2013.

**3.3.7. Photo Documentation**

Photographs of photo points PP1 to PP3, the transect endpoints, and the wetland determination data points (Figure 8, Appendix A) are shown on pages C-11 through C-13 of Appendix C.

**Table 21. MWAM Summary at the FNW-East Site in 2013 and 2014.**

| Function and Value Parameters from the 2008 Montana Wetland Assessment Method | 2013           | 2014           |
|---|----------------|----------------|
| Listed/Proposed T&E Species Habitat   | Low (0.0)      | Low (0.0)      |

**3.3.8. Maintenance Needs**

One Montana-listed noxious weed was identified in two locations at this site in 2014. These locations are shown in Figure 8 (Appendix A) and should be controlled to prevent further establishment. The recently constructed fence along the site was in good-working order. There were no man-made water control structures installed at FNW-East.

**3.3.9. Current Credit Summary**

The wetland acreage delineated in 2014 totaled 1.19 acres. Upland buffer accounted for 1.55 acres within the FNW-East monitoring boundary. Applying standard wetland compensatory mitigation ratios (Montana Regulatory Program, April 2005), the site attained an estimated 1.5 credit acres (Table 22). There are no established performance standards for this site.

**Table 22. Credit summary at the FNW-East Site in 2013 and 2014.**

| Habitat Type    | Mitigation Ratio | 2013 Delineated Acres | 2013 Estimated Credit Acres | 2014 Delineated Acres | 2014 Estimated Credit Acres |
|-----------------|------------------|-----------------------|-----------------------------|-----------------------|-----------------------------|
| Created Wetland | 1:1              | 1.19                  | 1.19                        | 1.19                  | 1.19                        |

### 3.4. Treasure County Line Site – Site 4

#### 3.4.1. Hydrology

The average total annual precipitation recorded at the Forsythe, Montana weather station (243098), from January 1975 to September 2014 was 14.48 inches (WRCC 2014). Total precipitation recorded at this station for 2012 was 7.81 inches, the driest year on record at this station. Total precipitation in 2013 totaled 19.47 inches and was the third wettest year on record at this station exceeding the average by five inches. The precipitation between January and August totaled 13.85 inches in 2013 and 15.63 in 2014, both of which exceeded the long-term average of 10.52 inches for this same period.

The FNW-Treasure Co Line site was constructed in 1999 adjacent to an existing wetland along Reservation Creek. The main source of wetland hydrology is a perennial high groundwater table. Occasional overbank flooding, direct precipitation and surface water runoff provide additional hydrologic contributions. Approximately 90 percent of the wetland was inundated during the 2014 survey, with the remaining wetland area exhibiting saturation to the surface. Hydrologic indicators recorded at this site include surface water, saturation, water marks, aquatic fauna, hydrogen sulfide odor, and algal mat/crust.

Two data points, T-1u and T-1w were assessed to determine the upland and wetland boundaries (Wetland Determination Data Forms, Appendix B). Data point T-1w was located within the created wetland and successfully met all three wetland criteria. Positive wetland hydrology indicators recorded at this data point included approximately three inches of surface water, high water table, saturation to the soil surface, water-stained leaves, aquatic invertebrates, and hydrogen sulfide odor. Data point T-1u was located one of the two upland islands. This upland area appeared to be at a native elevation and relatively undisturbed during excavation of the surrounding wetland. Aside from one secondary indicator (surface soil cracks) no signs of wetland hydrology were observed in this area which appeared to be approximately two to three feet above seasonal high water elevation. This area appeared to be above the influence of seasonal high water and not likely to convert to wetland habitat.

#### 3.4.2. Vegetation

A comprehensive list of 32 species identified during the 2013 and 2014 field surveys is presented in Table 23. Two upland communities and one wetland vegetation community were identified and mapped at the FNW-Treasure Co Line site (Figure 10, Appendix A). These communities included upland Type 1 – *Artemisia tridentata/Chenopodium album*, upland Type 2 – *Elymus Canadensis/Bromus tectorum*, and wetland Type 3 – *Schoenoplectus* spp. The species composition is detailed by type on the FNW-Treasure Co Line Monitoring Form (Appendix B) and discussed below.

**Table 23. Vegetation species observed at the FNW-Treasure County Line Site in 2013 and 2014.**

| Scientific Names                    | Common Names               | GP Indicator Status <sup>1</sup> |
|-------------------------------------|----------------------------|----------------------------------|
| <i>Agropyron cristatum</i>          | Crested Wheatgrass         | NL                               |
| <i>Algae, green</i>                 | Algae, green               | NL                               |
| <i>Artemisia tridentata</i>         | Big Sagebrush              | NL                               |
| <i>Asclepias speciosa</i>           | Showy Milkweed             | FAC                              |
| <i>Bassia scoparia</i>              | Mexican-Fireweed           | FACU                             |
| <i>Bromus tectorum</i>              | Cheatgrass                 | NL                               |
| <i>Chenopodium album</i>            | Lamb's-Quarters            | FACU                             |
| <i>Cirsium arvense</i>              | Canadian Thistle           | FACU                             |
| <i>Cirsium vulgare</i>              | Bull Thistle               | UPL                              |

| <i>Schedonorus pratensis</i>        | Meadow False Rye Grass     | FACU                             |
| <i>Schoenoplectus maritimus</i>     | Saltmarsh Club-Rush        | OBL                              |
| <i>Schoenoplectus pungens</i>       | Three-Square               | OBL                              |
| <b><i>Sisymbrium altissimum</i></b> | <b>Tall Hedge-Mustard</b>  | <b>FACU</b>                      |
| <i>Sonchus arvensis</i>             | Field Sow-Thistle          | FAC                              |
| <i>Symphoricarpos albus</i>         | Common Snowberry           | UPL                              |
| <i>Taraxacum officinale</i>         | Common Dandelion           | FACU                             |
| <b><i>Tragopogon dubius</i></b>     | <b>Meadow Goat's-beard</b> | <b>NL</b>                        |
| <i>Typha latifolia</i>              | Broad-Leaf Cat-Tail        | OBL                              |

<sup>1</sup> 2014 NWPL (Lichvar et al., 2014)

New species identified in 2014 are **bolded**.

Upland Type 1 - *Artemisia tridentata*/*Chenopodium album* was mapped across 1.92 acres within the upland perimeter of the monitoring area. Big sagebrush (*Artemisia tridentata*), lamb's-quarters, Mexican-fireweed, fox-tail barley, cheatgrass, Kentucky bluegrass (*Poa pratensis*), nodding wild rye (*Elymus canadensis*) and thirteen other species were identified in this community.

Upland Type 2 – *Elymus Canadensis*/*Bromus tectorum* was identified across 2.47 acres in the upland areas not dominated by big sagebrush and included nodding wild rye and cheatgrass as dominant components of this community. Twenty-one other species, mostly upland species, were identified in this

community. This community was also identified on the two upland islands that remained intact during construction at this site.

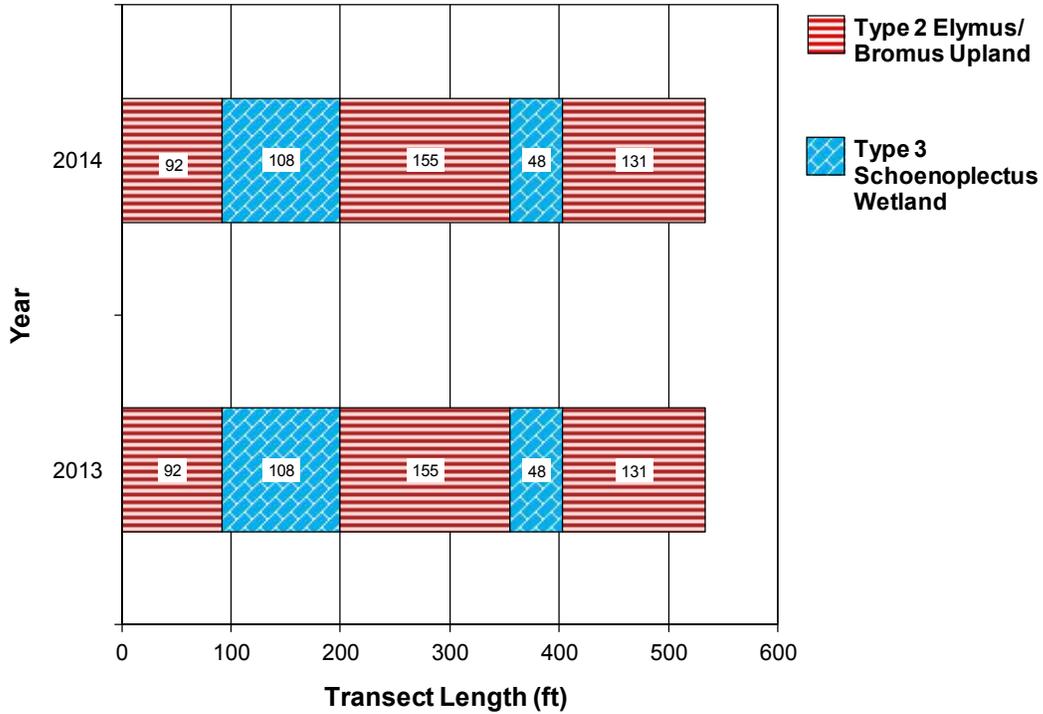

Wetland Type 3 – *Schoenoplectus* spp. was mapped across 1.50 acres within the wetland cell excavated in 1999. This community supported a fully developed vegetation community and was dominated by three-square club-rush (*Schoenoplectus pungens*), with lesser amounts of saltmarsh club-rush (*S. maritimus*), fox-tail barley, broad-leaf cat-tail, and five other species. Inundation was present throughout this community.

Vegetation results for Transect 1 are detailed on the FNW-Treasure Co Line Monitoring Form (Appendix B) and summarized in Table 24 and Charts 11 and 12. Photos of the transect end points are shown on page C-18 in Appendix C. This transect began at the fence line along the northern boundary of the mitigation area, traversed approximately 534 feet across the excavated wetland and one of the upland islands, and ended along the southern boundary of the monitoring area. Upland community Type 2 was located at both ends of the transect and across the upland island. Wetland community Type 3 was intercepted on both sides of the island. Approximately 30 percent of the transect was dominated by hydrophytic species. Twenty-two species were identified along the transect, including seven hydrophytes and 15 upland species.

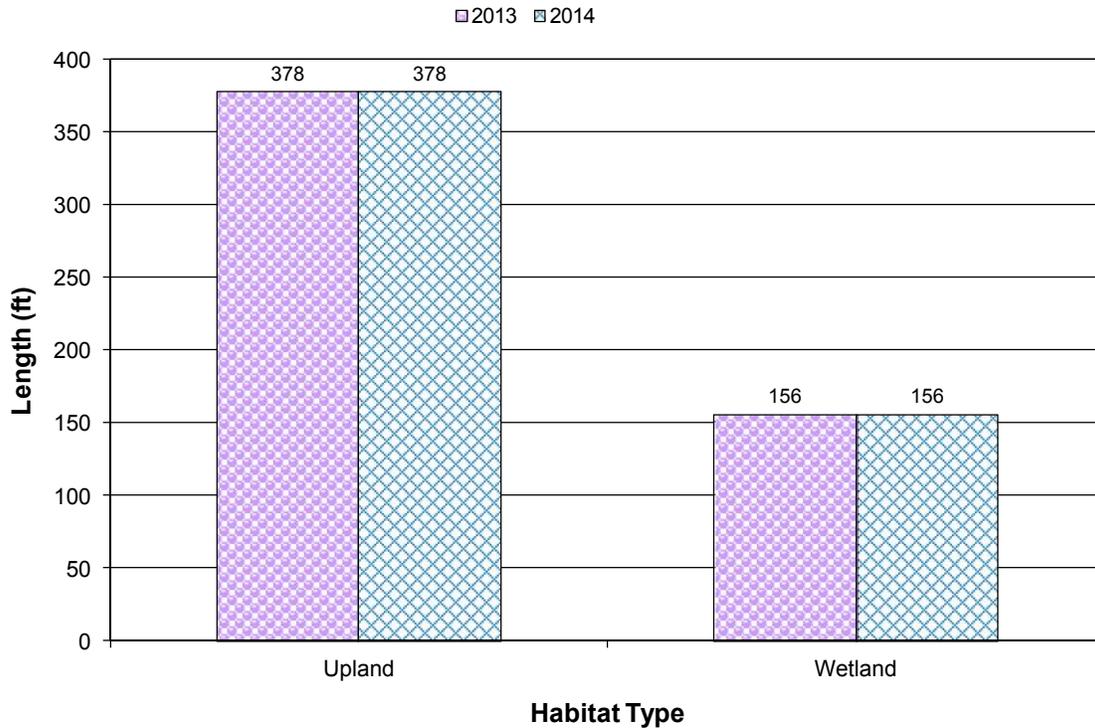

**Table 24. Transect 1 data summary for the FNW-Treasure County Line Site in 2013 and 2014.**

| Monitoring Year   | 2013       | 2014       |
|---|------------|------------|
| <b>Transect Length (feet)</b>                                   | <b>534</b> | <b>534</b> |

**Chart 11. Transect 1 map for the FNW-Treasure County Line Site showing vegetation types from transect start (0 feet) to finish (534 feet) in 2013 and 2014.**

**Chart 12. Length of vegetation communities within Transect 1 at the FNW-Treasure County Line Site in 2013 and 2014.**

Two patches of Canadian thistle, a Priority 2B noxious weed, were identified within this site in 2014 and mapped in Figure 10 (Appendix A). Both infestations were recorded at less than 0.1-acre in size and included an area with low cover class at the edge of the wetland near the vegetation transect and another area with moderate cover (6-25%) in the northwest area of the site. No woody vegetation was installed at this site.

**3.4.3. Soil**

The project site was mapped as the Gerdrum-Marvan silty clays series in the Rosebud County Soil Survey Geographic (SSURGO) database. The Gerdrum and Marvan series consist of very deep well-drained fine-textured soils developed in alluvium or glacialfluvial deposits. The Marvan series is included on the Montana Hydric Soil List. The wetland data point was located in an area disturbed during construction. The upland data point was relatively undisturbed during construction and generally confirmed the mapped Gerdrum series.

Data point T-1w met the hydric soil criteria with a hydrogen sulfide odor. The soil profile displayed a gray (10 YR 5/1) clay. Redoximorphic features were difficult to distinguish due to the saturated condition of the soil. Data point T-1u exhibited a friable brown (10YR 5/3) silty clay with no redoximorphic features within the upper 12 inches.

**3.4.4. Wetland Delineation**

Two data points were evaluated in 2014 to determine the wetland and upland boundaries at the site (Wetland Determination Data Forms, Appendix B). The surveyed wetland boundaries are shown mapped on Figure 10 in Appendix A. The delineation identified 1.50 acres of wetland and 4.39 acres of upland buffer (Table 25). The excavated wetland basin has a fully developed hydrophytic community and appears to support perennial inundation/saturation. This wetland mitigation area is adjacent to a pre-existing natural wetland and has effectively increased the size of the overall wetland complex. The wetland boundary currently extends to the limit of excavation and appears to have developed to full potential.

**Table 25. Wetland/upland habitat acreages delineated at the FNW-Treasure County Line Site in 2013 and 2014.**

| WETLAND AND UPLAND HABITATS | 2013 (acres) | 2014 (acres) |
|-----------------------------|--------------|--------------|
| Project Area                | 5.89         | 5.89         |
| Created Wetland             | 1.50         | 1.50         |
| Upland Buffer               | 4.39         | 4.39         |

### 3.4.5. Wildlife

A list of wildlife species observed directly and indirectly at the site in 2013 and 2014 is presented in Table 26. Wildlife signs observed and bird activity codes were recorded on the Monitoring Form in Appendix B. Nine bird species were identified, including an American goldfinch, cliff swallow, great blue heron, mourning dove, red-winged blackbird, Sandhill crane, song sparrow, western meadowlark, and Wilson’s snipe. A northern leopard from was observed during the 2014 field survey.

**Table 26. Wildlife species observed at the FNW-Treasure County Line Site in 2013 and 2014.**

| COMMON NAME           | SCIENTIFIC NAME                 |
|-----------------------|---------------------------------|
| <b>AMPHIBIANS</b>     |                                 |
| Northern Leopard Frog | <i>Rana pipiens</i>             |
| <b>BIRDS</b>          |                                 |
| American Goldfinch    | <i>Spinus tristus</i>           |
| Cliff Swallow         | <i>Petrochelidon pyrrhonota</i> |
| Eastern Kingbird      | <i>Tyrannus tyrannus</i>        |
| Great Blue Heron      | <i>Ardea herodias</i>           |
| Mourning Dove         | <i>Zenaida macroura</i>         |
| Red-winged Blackbird  | <i>Agelaius phoeniceus</i>      |
| Sandhill Crane        | <i>Grus canadensis</i>          |
| Song Sparrow          | <i>Melospiza melodia</i>        |
| Western Meadowlark    | <i>Sturnella neglecta</i>       |
| Wilson's Snipe        | <i>Gallinago delicata</i>       |
| <b>MAMMALS</b>        |                                 |
| Coyote                | <i>Canis latrans</i>            |
| Muskrat               | <i>Ondatra zibethicus</i>       |

Species identified in 2014 are **bolded**.

### 3.4.6. Functional Assessment

Results of the 2013 and 2014 functional assessments were summarized in Table 27 and the completed form is included in Appendix B. The total aquatic habitat developed to date within the 5.89-acre project area is 1.50 acres. The FNW-Treasure County Line site was evaluated as one assessment area (AA) that encompasses the full constructed wetland. The AA was rated as a Category II wetland with 73.1 percent of the total possible points and 8.8 functional units. These values improved from 2013, primarily as a function of the decreased disturbance rating from moderate to low. The site received high ratings for general wildlife habitat, short/long term surface water storage, sediment/nutrient/toxicant removal, groundwater discharge/recharge and recreation/education potential and moderate ratings for MTNHP species habitat, production export/food chain support, and uniqueness.

**Table 27. MWAM Summary for the FNW-Treasure County Line Site in 2013 and 2014.**

| <b>Function and Value Parameters from the 2008 Montana Wetland Assessment Method</b> | <b>2013</b>     | <b>2014</b>     |

**3.4.7. Photo Documentation**

Photographs of photo points PP1 to PP4, the vegetation transect endpoints, and the wetland determination data points (Figure 9, Appendix A) are shown on pages C-14 through C-18 of Appendix C.

**3.4.8. Maintenance Needs**

Two patches of Canadian thistle, a Priority 2B noxious weed, were identified within this site in 2014 and mapped in Figure 10 (Appendix A). Both infestations were recorded at less than 0.1-acre in size and included an area with low cover class at the edge of the wetland near the vegetation transect and another area with moderate cover (6-25%) in the northwest area of the site. No man-made water control structures were installed at this site. The fence surrounding the mitigation area was in good working order when inspected in 2014.

**3.4.9. Current Credit Summary**

The 5.89-acre Treasure County Line mitigation site includes 1.5 acres of created wetland and 4.39 acres of upland buffer. Applying standard wetland compensatory mitigation ratios (Montana Regulatory Program, April 2005), the site has attained an estimated 2.38 credit acres (Table 28).

**Table 28. Credit summary for the FNW-Treasure County Line Site in 2013 and 2014.**

| Habitat Type    | Mitigation Ratio | 2013 Delineated Acres | 2013 Estimated Credit Acres | 2014 Delineated Acres | 2014 Estimated Credit Acres |
|-----------------|------------------|-----------------------|-----------------------------|-----------------------|-----------------------------|

**3.5. Comprehensive Credit Summary for Forsyth NW**

The wetland areas impacted during construction of the Volborg-N&S project in 2004 totaled 6.80 acres. Per the USACE requirement, the impacts were to be mitigated at a 1.5:1 ratio during the construction of the Forsyth-NW project (Corps File No.:NWO-2002-90-599; MDT control number 1514). An additional 2.18 acres of unavoidable wetland impacts that occurred during the construction of the Forsyth-NW project in 2012 has a required compensatory wetland mitigation per Corps File No.:NWO-2006-90-676, MDT control number 4059. Credits generated by the 1999 construction of the Forsyth NW-Treasure County Line mitigation site have been applied to the Forsyth-NW debits at a 1:1 ratio based on the development of this mitigation wetland site prior to impacts actually occurring.

MDT Right-of-Way agency has purchased the FNW properties resulting in MDT becoming the “fee title” landowner of the mitigation areas. As these properties are protected by legal instrument and MDT applies an active weed control management plan for the mitigation areas, upland credits have been estimated within the boundaries at each of these sites.

The credits generated at the Treasure County Line site totaled 2.38 acres in 2014 and exceeded the FNW debit requirement of 2.18 acres (Table 29). The total credits estimated for all four FNW site in 2014 was 11.08 acres. This value was 1.30 credit acres short of the required 12.38 credit acres. Continued wetland development at the FNW-West site is possible based on the installation of a functioning dike and will contribute over time to total credits generated by the FNW mitigation project. There is minimal potential for expansion of wetlands at the Middle, East, and Treasure County line sites as development has already extended to near the margins of the excavated footprint. There are no quantitative metrics or performance criteria associated with the success of these mitigation sites. The monitoring requirements identified within the approved mitigation plan are being satisfied.

**Table 29. Credit/Debit summary for Forsyth-NW project.**

| <b>PROJECT SITE</b>              | <b>Actual Acres</b> | <b>Type</b>                | <b>Ratio</b> | <b>Debit Acres</b>  |              |
|----------------------------------|---------------------|----------------------------|--------------|---------------------|--------------|

**Legend**

- Monitoring Limits
- Wetland Limits
- Vegetation Communities

*Base Photography Date:  
July 27, 2014*

**Vegetation Community Types**

- ① Artemisia tridentata/Chenopodium album
- ② Elymus canadensis/Bromus tectorum
- ③ Schoenoplectus spp.

**Noxious Weeds**  
*Cirsium arvense*

**Infestation Size**  
 X = <0.1 acre  
 ▲ = 0.1 to 1 acre  
 ■ = 1 to 5 acre

**Cover Class**  
 T = Trace (<1% cover)  
 L = Low (1-5% cover)  
 M = Moderate (6-25% cover)  
 H = High (26-100% cover)

2014 MDT Wetland Mitigation Site Monitoring Form  
2014 USACE Routine Wetland Determination Data Form  
2014 MDT Montana Wetland Assessment Form

---

MDT Wetland Mitigation Monitoring  
West Site (1), Middle Site (2), and East Site (3), Treasure County Line Site (4)  
Rosebud County, Montana

**MDT WETLAND MITIGATION SITE MONITORING FORM**

Project Site: Forsyth NW - West Assessment Date/Time 6/19/2014 8:46:32 AM

Person(s) conducting the assessment: B Sandefur, E Sandefur

Weather: Partly cloudy & warm, recent rain. Location: ~15 miles NW of Forsyth

MDT District: Glendive Milepost: RP 280 on US 12

Legal Description: T 7N R 39E Section(s) 20 & 29

Initial Evaluation Date: 8/15/2013 Monitoring Year: 2 #Visits in Year: 1

Size of Evaluation Area: 13.71 (acres)

Land use surrounding wetland:

Agriculture, US 12

**HYDROLOGY**

Surface Water Source: Periodic flooding from Big Porcupine Creek, seasonal high groundwater

Inundation:  Average Depth: 0.5 (ft) Range of Depths: 0-3.5 (ft)

Percent of assessment area under inundation: 60 %

Depth at emergent vegetation-open water boundary: 0.2 (ft)

If assessment area is not inundated then are the soils saturated within 12 inches of surface: Yes

Other evidence of hydrology on the site (ex. – drift lines, erosion, stained vegetation, etc):

Surface soil cracks, sediment deposits, iron deposits, drain patterns, water-stained leaves, algal mat/crust, drift deposits.

**Groundwater Monitoring Wells**

Record depth of water surface below ground surface, in feet.

**Well ID**                      **Water Surface Depth (ft)**

No wells

Additional Activities Checklist:

- Map emergent vegetation-open water boundary on aerial photograph.
- Observe extent of surface water during each site visit and look for evidence of past surface water elevations (drift lines, erosion, vegetation staining, etc.)
- Use GPS to survey groundwater monitoring well locations, if present.

**Hydrology Notes:**

Mitigation area receives surface water when East Spring Creek Coulee produces surface flow and from periodic flooding of Big Porcupine Creek with potential for high water velocities through constructed wetland.

## VEGETATION COMMUNITIES

Site Forsyth NW - West

(Cover Class Codes 0 = < 1%, 1 = 1-5%, 2 = 6-10%, 3 = 11-20%, 4 = 21-50% , 5 = >50% )

**Community #** 1 **Community Type:** Bromus tectorum / Sarcobatus vermiculatus **Acres** 5.34

Transect Notes:

Transect inundated from recent rains.

## PLANTED WOODY VEGETATION SURVIVAL

Forsyth NW - West

| <b>Planting Type</b> | <b>#Planted</b> | <b>#Alive</b> | <b>Notes</b> |
|----------------------|-----------------|---------------|--------------|
|----------------------|-----------------|---------------|--------------|

---

None

### Comments

No woody vegetation installed at site. Natural recruitment of cottonwood and willows.

**WILDLIFE**

**Birds**

Were man-made nesting structures installed?   No  

If yes, type of structure: \_\_\_\_\_

How many? \_\_\_\_\_

Are the nesting structures being used?   No  

Do the nesting structures need repairs?   No  

Nesting Structure Comments:

**Wildlife Comments:**

**PHOTOGRAPHS**

Take photographs of the following permanent reference points listed in the check list below. Record the direction of the photograph using a compass. When at the site for the first time, establish a permanent reference point by setting a ½ inch rebar or fencepost extending 2-3 feet above ground. Survey the location with a resource grade GPS and mark the location on the aerial photograph.

**Photograph Checklist:**

- One photograph for each of the four cardinal directions surrounding the wetland.
- At least one photograph showing upland use surrounding the wetland. If more than one upland exists then take additional photographs.
- At least one photograph showing the buffer surrounding the wetland.
- One photograph from each end of the vegetation transect, showing the transect.

**Comments:**

**ADDITIONAL ITEMS CHECKLIST**

**Hydrology**

- Map emergent vegetation/open water boundary on aerial photos.
- Observe extent of surface water. Look for evidence of past surface water elevations (e.g. drift lines, vegetation staining, erosion, etc).

**Photos**

- One photo from the wetland toward each of the four cardinal directions
- One photo showing upland use surrounding the wetland.
- One photo showing the buffer around the wetland
- One photo from each end of each vegetation transect, toward the transect

**Vegetation**

- Map vegetation community boundaries
- Complete Vegetation Transects

**Soils**

- Assess soils

**Wetland Delineations**

- Delineate wetlands according to applicable USACE protocol (1987 form or Supplement)
- Delineate wetland – upland boundary onto aerial photograph.

Wetland Delineation Comments

**Functional Assessments**

- Complete and attach full MDT Montana Wetland Assessment Method field forms.

Functional Assessment Comments:

**Maintenance**

Were man-made nesting structure installed at this site? No

If yes, do they need to be repaired?

If yes, describe the problems below and indicate if any actions were taken to remedy the problems

Were man-made structures built or installed to impound water or control water flow into or out of the wetland? Yes

If yes, are the structures in need of repair? No

If yes, describe the problems below.

Dike at lower end of site repaired in 2014 and had failed again during spring runoff in 2014.

**WETLAND DETERMINATION DATA FORM – Great Plains Region**

Project/Site: Forsyth NW - West City/County: Rosebud Co. Sampling Date: 6/20/2014  
 Applicant/Owner: MDT State: MT Sampling Point: We-1u  
 Investigator(s): B Sandefur Section, Township, Range: 20 7N 39E  
 Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): flat Slope (%): 0  
 Subregion (LRR): LRR G Lat: 46.337668 Long: -106.872772 Datum: WGS84  
 Soil Map Unit Name: Marvan silty clay NWI classification: NA

Are climatic / hydrologic conditions on the site typical for this time of year? Yes  No  (If no, explain in Remarks.)  
 Are Vegetation , Soil , or Hydrology  significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation , Soil , or Hydrology  naturally problematic? (If needed, explain any answers in Remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

|                                 |                              |  |  |                              |  |
|---------------------------------|------------------------------|--|--|------------------------------|--|
| Hydrophytic Vegetation Present? | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | Is the Sampled Area<br>within a Wetland? | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |
| Hydric Soil Present?            | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |  |                              |  |
| Wetland Hydrology Present?      | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |  |                              |  |

Remarks: Area likely to convert to wetland with functioning dike/outlet control structure.

**Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)**

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) (LRR F)
- 1 cm Muck (A9) (LRR F, G, H)
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- 2.5 cm Mucky Peat or Peat (S2) (LRR G, H)
- 5 cm Mucky Peat or Peat (S3) (LRR F)
- Sandy Gleyed Matrix (S4)
- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- High Plains Depressions (F16) (MLRA 72 & 73 of LRR H)

**Indicators for Problematic Hydric Soils<sup>3</sup>:**

- 1 cm Muck (A9) (LRR I, J)
- Coast Prairie Redox (A16) (LRR F, G, H)
- Dark Surface (S7) (LRR G)
- High Plains Depressions (F16) (LRR H outside of MLRA 72 & 73)
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Very Shallow Dark Surface (TF12)
- Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if present):**

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes  No

Remarks: No redox in upper 16in., Na concentration below 16in.

**HYDROLOGY**

**Wetland Hydrology Indicators:**

**Primary Indicators (minimum of one required; check all that apply)**

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Inundation Visible on Aerial Imagery (B7)
- Water-Stained Leaves (B9)
- Salt Crust (B11)
- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Dry-Season Water Table (C2)
- Oxidized Rhizospheres on Living Roots (C3) (where not tilled)
- Presence of Reduced Iron (C4)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

**Secondary Indicators (minimum of two required)**

- Surface Soil Cracks (B6)
- Sparsely Vegetated Concave Surface (B8)
- Drainage Patterns (B10)
- Oxidized Rhizospheres on Living Roots (C3) (where tilled)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Geomorphic Position (D2)
- FAC-Neutral Test (D5)
- Frost-Heave Hummocks (D7) (LRR F)

**Field Observations:**

Surface Water Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Water Table Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Saturation Present? (includes capillary fringe) Yes  No  Depth (inches): \_\_\_\_\_

Wetland Hydrology Present? Yes  No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Area with very marginal hydrology, considered upland based on dike failure and lack of sufficient hydrologic duration. With functioning water control, wetland area would increase into this data point location.

**WETLAND DETERMINATION DATA FORM – Great Plains Region**

Project/Site: Forsyth NW - West City/County: Rosebud Co. Sampling Date: 6/20/2014  
 Applicant/Owner: MDT State: MT Sampling Point: We-1w  
 Investigator(s): B Sandefur Section, Township, Range: 20 7N 39E  
 Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): undulating Slope (%): 0  
 Subregion (LRR): LRR G Lat: 46.338127 Long: -106.87367 Datum: WGS84  
 Soil Map Unit Name: Marvan silty clay NWI classification: NA

Are climatic / hydrologic conditions on the site typical for this time of year? Yes  No  (If no, explain in Remarks.)  
 Are Vegetation , Soil , or Hydrology  significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation , Soil , or Hydrology  naturally problematic? (If needed, explain any answers in Remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Hydrophytic Vegetation Present? Yes  No   
 Hydric Soil Present? Yes  No   
 Wetland Hydrology Present? Yes  No

Is the Sampled Area within a Wetland? Yes  No

Remarks:

**Hydrophytic Vegetation Indicators**

- 1 - Rapid Test for Hydrophytic Vegetation
- 2 - Dominance Test is >50%
- 3 - Prevalence Index is <= 3.0
- 4 - Morphological Adaptations (Provide supporting data in remarks or on separate sheet.)
- 5 - Wetland Non-Vascular Plants
- Problematic Hydrophytic Vegetation (Explain)

Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic for #3, 4, 5.

**Hydrophytic Vegetation Present?** Yes  NO

Remarks:

Willow and cottonwood recruits in area just outside of plot.

Are climatic / hydrologic conditions on the site typical for this time of year? Yes  No  (If no, explain in Remarks.)  
 Are Vegetation , Soil , or Hydrology  significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation , Soil , or Hydrology  naturally problematic? (If needed, explain any answers in Remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

|                                 |   |  |  |                              |  |
|---------------------------------|---|--|--|------------------------------|--|
| Hydrophytic Vegetation Present? | Yes <input type="checkbox"/>            | No <input checked="" type="checkbox"/> | Is the Sampled Area<br>within a Wetland? | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |
| Hydric Soil Present?            | Yes <input type="checkbox"/>            | No <input checked="" type="checkbox"/> |  |                              |  |
| Wetland Hydrology Present?      | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/>            |  |                              |  |

Remarks: Area would likely respond favorably toward wetland habitat development with prolonged inundation from functioning dike.

**VEGETATION - Use scientific names of plant**

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. <sup>2</sup>Location: PL=Pore Lining, M=Matrix.

**Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)**

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) (LRR F)
- 1 cm Muck (A9) (LRR F, G, H)
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- 2.5 cm Mucky Peat or Peat (S2) (LRR G, H)
- 5 cm Mucky Peat or Peat (S3) (LRR F)
- Sandy Gleyed Matrix (S4)
- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- High Plains Depressions (F16) (MLRA 72 & 73 of LRR H)

**Indicators for Problematic Hydric Soils<sup>3</sup>:**

- 1 cm Muck (A9) (LRR I, J)
- Coast Prairie Redox (A16) (LRR F, G, H)
- Dark Surface (S7) (LRR G)
- High Plains Depressions (F16) (LRR H outside of MLRA 72 & 73)
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Very Shallow Dark Surface (TF12)
- Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if present):**

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes  No

Remarks: Soils moist following rain, not saturated. No redoximorphic features identified within the upper 12in of soil profile.

**HYDROLOGY**

**Wetland Hydrology Indicators:**

**Primary Indicators (minimum of one required; check all that apply)**

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Inundation Visible on Aerial Imagery (B7)
- Water-Stained Leaves (B9)
- Salt Crust (B11)
- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Dry-Season Water Table (C2)
- Oxidized Rhizospheres on Living Roots (C3) (where not tilled)
- Presence of Reduced Iron (C4)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

**Secondary Indicators (minimum of two required)**

- Surface Soil Cracks (B6)
- Sparsely Vegetated Concave Surface (B8)
- Drainage Patterns (B10)
- Oxidized Rhizospheres on Living Roots (C3) (where tilled)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Geomorphic Position (D2)
- FAC-Neutral Test (D5)
- Frost-Heave Hummocks (D7) (LRR F)

**Field Observations:**

Surface Water Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Water Table Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Saturation Present? (includes capillary fringe) Yes  No  Depth (inches): \_\_\_\_\_

Wetland Hydrology Present? Yes  No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

**WETLAND DETERMINATION DATA FORM – Great Plains Region**

Project/Site: Forsyth NW - West City/County: Rosebud Co. Sampling Date: 6/20/2014  
 Applicant/Owner: MDT State: MT Sampling Point: We-3u  
 Investigator(s): B Sandefur Section, Township, Range: 20 7N 39E  
 Landform (hillslope, terrace, etc.): Floodplain Local relief (concave, convex, none): flat Slope (%): \_\_\_\_\_  
 Subregion (LRR): LRR G Lat: -106.871974 Long: 46.33697 Datum: WGS84  
 Soil Map Unit Name: Marvan silty clay NWI classification: NA

Are climatic / hydrologic conditions on the site typical for this time of year? Yes  No  (If no, explain in Remarks.)  
 Are Vegetation , Soil , or Hydrology  significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation , Soil , or Hydrology  naturally problematic? (If needed, explain any answers in Remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

|   |   |
|---|---|

|                |               |     |     |                |   |                   |                  |         |                             |

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. <sup>2</sup>Location: PL=Pore Lining, M=Matrix.

**Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)**

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) (LRR F)
- 1 cm Muck (A9) (LRR F, G, H)
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- 2.5 cm Mucky Peat or Peat (S2) (LRR G, H)
- 5 cm Mucky Peat or Peat (S3) (LRR F)
- Sandy Gleyed Matrix (S4)
- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- High Plains Depressions (F16) (MLRA 72 & 73 of LRR H)

**Indicators for Problematic Hydric Soils<sup>3</sup>:**

- 1 cm Muck (A9) (LRR I, J)
- Coast Prairie Redox (A16) (LRR F, G, H)
- Dark Surface (S7) (LRR G)
- High Plains Depressions (F16) (LRR H outside of MLRA 72 & 73)
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Very Shallow Dark Surface (TF12)
- Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if present):**

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes  No

Remarks: No redox identified within upper 14 inches of soil profile.

**HYDROLOGY**

**Wetland Hydrology Indicators:**

Primary Indicators (minimum of one required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Inundation Visible on Aerial Imagery (B7)
- Water-Stained Leaves (B9)
- Salt Crust (B11)
- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Dry-Season Water Table (C2)
- Oxidized Rhizospheres on Living Roots (C3) (where not tilled)
- Presence of Reduced Iron (C4)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- Surface Soil Cracks (B6)
- Sparsely Vegetated Concave Surface (B8)
- Drainage Patterns (B10)
- Oxidized Rhizospheres on Living Roots (C3) (where tilled)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Geomorphic Position (D2)
- FAC-Neutral Test (D5)
- Frost-Heave Hummocks (D7) (LRR F)

**Field Observations:**

Surface Water Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Water Table Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Saturation Present? (includes capillary fringe) Yes  No  Depth (inches): \_\_\_\_\_

Wetland Hydrology Present? Yes  No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Did not see any hydrologic indicators that indicate sufficient duration for wetland hydrology. Suspect area flooded for short duration, groundwater table over 3ft at time of sampling.

# MDT Montana Wetland Assessment Form (revised March 2008)

1. Project name  2. MDT project#  Control#

3. Evaluation Date  4. Evaluators  5. Wetland/Site# (s)

6. Wetland Location(s): T  R  Sec1  T  R  Sec2

Approx Stationing or Mileposts

Watershed  Watershed/County

7. Evaluating Agency

8. Wetland size acres   
How assessed:

Purpose of Evaluation

Wetlands potentially affected by MDT project

Mitigation Wetlands: pre-construction

Mitigation Wetlands: post construction

Other

9. Assessment area (AA) size (acres)   
How assessed:

**10. Classification of Wetland and Aquatic Habitats in AA**

| HGM Class (Brinson)                       | Class (Cowardin)                                 | Modifier (Cowardin)                    | Water Regime                                       | % of AA                         |
|---|--|--|--|---------------------------------|
| <input type="text" value="Riverine"/>     | <input type="text" value="Emergent Wetland"/>    | <input type="text"/>                   | <input type="text" value="Permanent/Perennial"/>   | <input type="text" value="20"/> |
| <input type="text" value="Depressional"/> | <input type="text" value="Emergent Wetland"/>    | <input type="text" value="Excavated"/> | <input type="text" value="Seasonal/Intermittent"/> | <input type="text" value="75"/> |
| <input type="text" value="Depressional"/> | <input type="text" value="Scrub-Shrub Wetland"/> | <input type="text"/>                   | <input type="text" value="Seasonal/Intermittent"/> | <input type="text" value="5"/>  |
| <input type="text"/>                      | <input type="text"/>                             | <input type="text"/>                   | <input type="text"/>                               | <input type="text"/>            |
| <input type="text"/>                      | <input type="text"/>                             | <input type="text"/>                   | <input type="text"/>                               | <input type="text"/>            |
| <input type="text"/>                      | <input type="text"/>                             | <input type="text"/>                   | <input type="text"/>                               | <input type="text"/>            |

11. Estimated Relative Abundance

**12. General Condition of AA**

i. Disturbance: (use matrix below to determine [circle] appropriate response – see instructions for Montana-listed noxious weed and aquatic nuisance vegetation species (ANVS) lists)

| Conditions within AA  | Predominant conditions adjacent to (within 500 feet of) AA  |  |   |
|---|---|--|---|
|   | Managed in predominantly natural state; is not grazed, hayed, logged, or otherwise converted; does not contain roads or buildings; and noxious weed or ANVS cover is <=15%. | Land not cultivated, but may be moderately grazed or hayed or selectively logged; or has been subject to minor clearing; contains few roads or buildings; noxious weed or ANVS cover is <=30%. | Land cultivated or heavily grazed or logged; subject to substantial fill placement, grading, clearing, or hydrological alteration; high road or building density; or noxious weed or ANVS cover is >=30%. |
| AA occurs and is managed in predominantly natural state; is not grazed, hayed, logged, or otherwise converted; does not contain roads or occupied buildings; and noxious weed or ANVS cover is <=15%.   | <input type="text" value="low disturbance"/>  | <input type="text" value="low disturbance"/>   | <input type="text" value="moderate disturbance"/>   |
| AA not cultivated, but may be moderately grazed or hayed or selectively logged; or has been subject to relatively minor clearing, fill placement, or hydrological alteration; contains few roads or buildings; noxious weed or ANVS cover is <=30%. | <input type="text" value="moderate disturbance"/>   | <input type="text" value="moderate disturbance"/>  | <input type="text" value="high disturbance"/>   |
| AA cultivated or heavily grazed or logged; subject to relatively substantial fill placement, grading, clearing, or hydrological alteration; high road or building density; or noxious weed or ANVS cover is >=30%.                                  | <input type="text" value="high disturbance"/>   | <input type="text" value="high disturbance"/>  | <input type="text" value="high disturbance"/>   |

**Comments: (types of disturbance, intensity, season, etc)**

Impact to vegetation within AA from construction of mitigation area and US12 road improvements recovering with time, improved disturbance rating from 2013 (high).

**ii. Prominent noxious, aquatic nuisance, other exotic species:**

**iii. Provide brief descriptive summary of AA and surrounding land use/habitat**

AA includes existing and constructed wetlands within floodplain of an Unnamed Tributary of Big Porcupine. Surrounding land includes US12 and agriculture.

13. **Structural Diversity:** (based on number of "Cowardin" **vegetated** classes present [do not include unvegetated classes], see #10 above)

| Existing # of "Cowardin" Vegetated Classes in AA                | Initial Rating | Is current management preventing (passive) existence of additional vegetated classes? |      | Modified Rating |
|---|----------------|---|------|-----------------|
| >=3 (or 2 if 1 is forested) classes                             | H              | NA  | NA   | NA              |
| 2 (or 1 if forested) classes                                    | M              | NA  | NA   | NA              |
| 1 class, but not a monoculture                                  | M              | <NO   | YES> | L               |
| 1 class, monoculture (1 species comprises >=90% of total cover) | L              | NA  | NA   | NA              |

Comments: Emergent wetlands with occasional trees and shrubs

**SECTION PERTAINING to FUNCTIONS VALUES ASSESSMENT**

14A. Habitat for Federally Listed or Proposed Threatened or Endangered Plants or Animals:

i. AA is Documented (D) or Suspected (S) to contain (check one based on definitions contained in instructions):

Primary or critical habitat (list species)     D    S    \_\_\_\_\_

Secondary habitat (list Species)             D    S    \_\_\_\_\_

Incidental habitat (list species)            D    S    \_\_\_\_\_

No usable habitat                                 S

ii. **Rating** (use the conclusions from i above and the matrix below to arrive at [check] the functional points and rating)

| Highest Habitat Level        | doc/primary | sus/primary | doc/secondary | sus/secondary | doc/incidental | sus/incidental | None |
|------------------------------|-------------|-------------|---------------|---------------|----------------|----------------|------|
| Functional Points and Rating | 1H          | .9H         | .8H           | .7M           | .3L            | .1L            | 0L   |

Sources for documented use    USF&WS T&E database for Rosebud County

14B. Habitat for plant or animals rated S1, S2, or S3 by the Montana Natural Heritage Program: (not including species listed in 14A above)

i. AA is Documented (D) or Suspected (S) to contain (check one based on definitions contained in instructions):

Primary or critical habitat (list species)     D    S    Ammannia robusta (S2)

Secondary habitat (list Species)             D    S    \_\_\_\_\_

Incidental habitat (list species)            D    S    \_\_\_\_\_

No usable habitat                                 S

ii. **Rating** (use the conclusions from i above and the matrix below to arrive at [check] the functional points and rating)

| Highest Habitat Level                                     | doc/primary | sus/primary | doc/secondary | sus/secondary | doc/incidental | sus/incidental | None |
|---|-------------|-------------|---------------|---------------|----------------|----------------|------|
| <b>S1 Species:</b><br>Functional Points and Rating        | 1H          | .8H         | .7M           | .6M           | .2L            | .1L            | 0L   |
| <b>S2 and S3 Species:</b><br>Functional Points and Rating | .9H         | .7M         | .6M           | .5M           | .2L            | .1L            | 0L   |

Sources for documented use    Ammannia observed within AA

**14C. General Wildlife Habitat Rating:**

i. Evidence of overall wildlife use in the AA (check substantial, moderate, or low based on supporting evidence):

Moderate

**Substantial** (based on any of the following [check]):

- observations of abundant wildlife #s or high species diversity (during any period)
- abundant wildlife sign such as scat, tracks, nest structures, game trails, etc.
- presence of extremely limiting habitat features not available in the surrounding area
- interviews with local biologists with knowledge of the AA

**Minimal** (based on any of the following [check]):

- few or no wildlife observations during peak use periods
- little to no wildlife sign
- sparse adjacent upland food sources
- interviews with local biologists with knowledge of the AA

**Moderate** (based on any of the following [check]):

- observations of scattered wildlife groups or individuals or relatively few species during peak periods
- common occurrence of wildlife sign such as scat, tracks, nest structures, game trails, etc.
- adequate adjacent upland food sources
- interviews with local biologists with knowledge of the AA

ii. **Wildlife** habitat features (Working from top to bottom, check appropriate AA attributes in matrix to arrive at rating. Structural diversity is from #13. For class cover to be considered evenly distributed, the most and least prevalent **vegetated** classes must be within 20% of each other in terms of their percent composition of the AA (see #10). Abbreviations for surface water durations are as follows: P/P = permanent/perennial; S/I = seasonal/intermittent; T/E = temporary/ephemeral; and A = absent [see instructions for further definitions of these terms])

| Structural diversity (see #13)                   | High |     |     |   |        |     |     |   | Moderate |     |     |   |        |     |     |   | Low  |     |     |   |
|--|------|-----|-----|---|--------|-----|-----|---|----------|-----|-----|---|--------|-----|-----|---|------|-----|-----|---|
|  | Even |     |     |   | Uneven |     |     |   | Even     |     |     |   | Uneven |     |     |   | Even |     |     |   |
| Class cover distribution (all vegetated classes) |      |     |     |   |        |     |     |   |          |     |     |   |        |     |     |   |      |     |     |   |
| Duration of surface water in ≥ 10% of AA         | P/P  | S/I | T/E | A | P/P    | S/I | T/E | A | P/P      | S/I | T/E | A | P/P    | S/I | T/E | A | P/P  | S/I | T/E | A |
| Low disturbance at AA (see #12)                  | E    | E   | E   | H | E      | E   | H   | H | E        | H   | H   | M | E      | H   | M   | M | E    | H   | M   | M |
| Moderate disturbance at AA (see #12)             | H    | H   | H   | H | H      | H   | H   | M | H        | H   | M   | M | H      | M   | M   | L | H    | M   | L   | L |
| High disturbance at AA (see #12)                 | M    | M   | M   | L | M      | M   | L   | L | M        | M   | L   | L | M      | L   | L   | L | L    | L   | L   | L |

iii. **Rating** (use the conclusions from i and ii above and the matrix below to arrive at [check] the functional points and rating)

| Evidence of wildlife use (i) | Wildlife habitat features rating (ii) |     |  |      |     |  |          |     |  |     |     |  |
|------------------------------|---------------------------------------|-----|--|------|-----|--|----------|-----|--|-----|-----|--|
|                              | Exceptional                           |     |  | High |     |  | Moderate |     |  | Low |     |  |
| <b>Substantial</b>           |                                       | 1E  |  |      | .9H |  |          | .8H |  |     | .7M |  |
| <b>Moderate</b>              |                                       | .9H |  |      | .7M |  |          | .5M |  |     | .3L |  |
| <b>Minimal</b>               |                                       | .6M |  |      | .4M |  |          | .2L |  |     | .1L |  |

**Comments** Several bird species and tracks of a few mammal species observed during field survey.

**14D. General Fish Habitat Rating:** (Assess this function if the AA is used by fish or the existing situation is "correctable" such that the AA could be used by fish [i.e., fish use is precluded by perched culvert or other barrier, etc.]. If the AA is not used by fish, fish use is not restorable due to habitat constraints, or is not desired from a management perspective [such as fish entrapped in a canal], then check  **NA** here and proceed to 14E.)

i. **Habitat Quality and Known / Suspected Fish Species in AA** (use matrix to arrive at [check the functional points and rating])

| Duration of surface water in AA                | Permanent / Perennial |     |          |     |      |     | Seasonal / Intermittent |     |          |     |      |     | Temporary / Ephemeral |     |          |     |      |     |

Sources used for identifying fish sp. potentially found in AA:

ii. **Modified Rating** (NOTE: Modified score cannot exceed 1 or be less than 0.1)

a) Is fish use of the AA significantly reduced by a culvert, dike, or other man-made structure or activity or is the waterbody included on the current final MDEQ list of waterbodies in need of TMDL development with listed "Probable Impaired Uses" including cold or warm water fishery or aquatic life support, or do aquatic nuisance plant or animal species (see Appendix E) occur in fish habitat?  Y  N  If yes, reduce score in i above by 0.1: **Modified Rating**

b) Does the AA contain a documented spawning area or other critical habitat feature (i.e., sanctuary pool, upwelling area, etc. - specify in comments) for native fish or introduced game fish?  Y  N If yes, add 0.1 to the adjusted score in i or iia above:

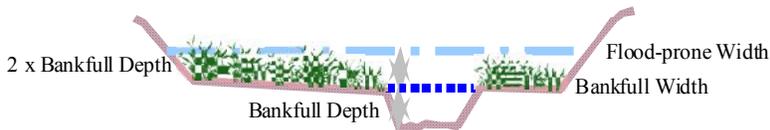

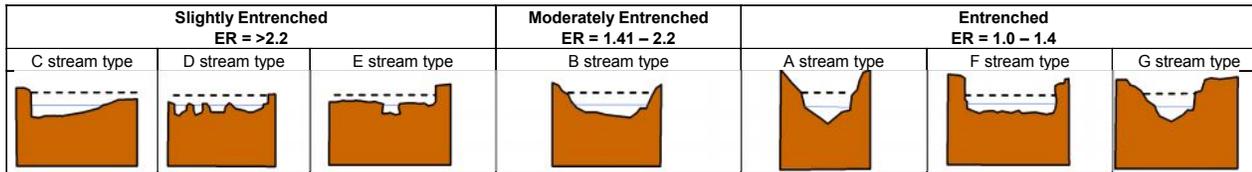

**Modified Rating**

iii. **Final Score and Rating:**  **Comments:**

**14E. Flood Attenuation:** (Applies only to wetlands subject to flooding via in-channel or overbank flow. If wetlands in AA are not flooded from in-channel or overbank flow, click  NA here and proceed to 14F.)

i. **Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating)

| Estimated or Calculated Entrenchment (Rosgen 1994, 1996) | Slightly entrenched - C, D, E stream types |        |      | Moderately entrenched - B stream type |        |      | Entrenched-A, F, G stream types |        |      |
|--|--|--------|------|---------------------------------------|--------|------|---------------------------------|--------|------|
|  | 75%  | 25-75% | <25% | 75%                                   | 25-75% | <25% | 75%                             | 25-75% | <25% |
| AA contains <b>no outlet or restricted outlet</b>        | 1H   | .9H    | .6M  | .8H                                   | .7M    | .5M  | .4M                             | .3L    | .2L  |
| AA contains <b>unrestricted outlet</b>                   | .9H  | .8H    | .5M  | .7M                                   | .6M    | .4M  | .3L                             | .2L    | .1L  |

Floodprone width  / Bankfull width  = Entrenchment ratio

ii. Are ≥10 acres of wetland in the AA subject to flooding AND are man-made features which may be significantly damaged by floods located within 0.5 mile downstream of the AA (check)?  Y  N

**Comments:**

**14F. Short and Long Term Surface Water Storage:** (Applies to wetlands that flood or pond from overbank or in-channel flow, precipitation, upland surface flow, or groundwater flow. If no wetlands in the AA are subject to flooding or ponding, click  NA here and proceed to 14G.)

i. **Rating** (Working from top to bottom, use the matrix below to arrive at [check] the functional points and rating. Abbreviations for surface water durations are as follows: P/P = permanent/perennial; S/I = seasonal/intermittent; and T/E = temporary/ephemeral [see instructions for further definitions of these terms].)

| Estimated maximum acre feet of water contained in wetlands within the AA that are subject to periodic flooding or ponding | >5 acre feet |     |     | 1.1 to 5 acre feet |     |     | ≤1 acre foot |     |     |
|---|--------------|-----|-----|--------------------|-----|-----|--------------|-----|-----|
|   | P/P          | S/I | T/E | P/P                | S/I | T/E | P/P          | S/I | T/E |
| Wetlands in AA flood or pond ≥ 5 out of 10 years  | 1H           | .9H | .8H | .8H                | .6M | .5M | .4M          | .3L | .2L |
| Wetlands in AA flood or pond < 5 out of 10 years  | .9H          | .8H | .7M | .7M                | .5M | .4M | .3L          | .2L | .1L |

**Comments:**

**14G. Sediment/Nutrient/Toxicant Retention and Removal:** (Applies to wetlands with potential to receive sediments, nutrients, or toxicants through influx of surface or ground water or direct input. If no wetlands in the AA are subject to such input, click  **NA** here and proceed to 14H.)

i. **Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating [H = high, M = moderate, or L = low])

|   |  |     |     |     |   |     |     |     |
|---|--|-----|-----|-----|---|-----|-----|-----|
| Sediment, nutrient, and toxicant input levels within AA | AA receives or surrounding land use with potential to deliver levels of sediments, nutrients, or compounds at levels such that other functions are not substantially impaired. Minor sedimentation, sources of nutrients or toxicants, or signs of eutrophication present. |     |     |     | Waterbody on MDEQ list of waterbodies in need of TMDL development for "probable causes" related to sediment, nutrients, or toxicants or AA receives or surrounding land use with potential to deliver high levels of sediments, nutrients, or compounds such that other functions are substantially impaired. Major sedimentation, sources of nutrients or toxicants, or signs of eutrophication present. |     |     |     |
| % cover of wetland vegetation in AA                     | ≥ 70%  |     |     |     | < 70%   |     |     |     |
| Evidence of flooding / ponding in AA                    | Yes  | No  | Yes | No  | Yes   | No  | Yes | No  |
| AA contains no or restricted outlet                     | 1H   | .8H | .7M | .5M | .5M   | .4M | .3L | .2L |
| AA contains unrestricted outlet                         | .9H  | .7M | .6M | .4M | .4M   | .3L | .2L | .1L |

Comments:

**14H Sediment/Shoreline Stabilization:** (Applies only if AA occurs on or within the banks of a river, stream, or other natural or man-made drainage, or on the shoreline of a standing water body which is subject to wave action. If 14H does not apply, click  **NA** here and proceed to 14I.)

i. **Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating)

| % Cover of <u>wetland</u> streambank or shoreline by species with stability ratings of ≥6 (see Appendix F). | Duration of surface water adjacent to rooted vegetation |  |                         |  |                       |  |
|---|---|--|-------------------------|--|-----------------------|--|
|   | Permanent / Perennial                                   |  | Seasonal / Intermittent |  | Temporary / Ephemeral |  |
| ≥ 65%   | 1H  |  | .9H                     |  | .7M                   |  |
| 35-64%  | .7M   |  | .6M                     |  | .5M                   |  |
| < 35%   | .3L   |  | .2L                     |  | .1L                   |  |

AA is subject to surface water flows during runoff in UT-Big Porcupine Creek.

Comments:

**14I. Production Export/Food Chain Support:**

i. **Level of Biological Activity** (synthesis of wildlife and fish habitat ratings [check])

| General Fish Habitat Rating (14D.iii.) | General Wildlife Habitat Rating (14C.iii.) |   |   |
|--|--|---|---|
|  | E/H  | M | L |
| E/H                                    | H  | H | M |
| M                                      | H  | M | M |
| L                                      | M  | M | L |
| N/A                                    | H  | M | L |

ii. **Rating** (Working from top to bottom, use the matrix below to arrive at [check] the functional points and rating. Factor A = acreage of vegetated wetland component in the AA; Factor B = level of biological activity rating from above (14I.i.); Factor C = whether or not the AA contains a surface or subsurface outlet; the final three rows pertain to duration of surface water in the AA, where P/P, S/I, and T/E are as previously defined, and A = "absent" [see instructions for further definitions of these terms].)

| A     | Vegetated component >5 acres |     |          |     |     |     | Vegetated component 1-5 acres |     |          |     |     |     | Vegetated component <1 acre |     |          |     |     |     |
|-------|------------------------------|-----|----------|-----|-----|-----|-------------------------------|-----|----------|-----|-----|-----|-----------------------------|-----|----------|-----|-----|-----|
|       | High                         |     | Moderate |     | Low |     | High                          |     | Moderate |     | Low |     | High                        |     | Moderate |     | Low |     |
|       | Yes                          | No  | Yes      | No  | Yes | No  | Yes                           | No  | Yes      | No  | Yes | No  | Yes                         | No  | Yes      | No  | Yes | No  |
| P/P   | 1E                           | .7H | .8H      | .5M | .6M | .4M | .9H                           | .6M | .7H      | .4M | .5M | .3L | .8H                         | .6M | .6M      | .4M | .3L | .2L |
| S/I   | .9H                          | .6M | .7H      | .4M | .5M | .3L | .8H                           | .5M | .6M      | .3L | .4M | .2L | .7H                         | .5M | .5M      | .3L | .3L | .2L |
| T/E/A | .8H                          | .5M | .6M      | .3L | .4M | .2L | .7H                           | .4M | .5M      | .2L | .3L | .1L | .6M                         | .4M | .4M      | .2L | .2L | .1L |

iii. **Modified Rating** (NOTE: Modified score cannot exceed 1 or be less than 0.1.) **Vegetated Upland Buffer (VUB):** Area with ≥ 30% plant cover, ≤ 15% noxious weed or ANVS cover, and that is not subjected to periodic mechanical mowing or clearing (unless for weed control).

a) Is there an average ≥ 50 foot-wide vegetated upland buffer around ≥ 75% of the AA circumference? Y  N  If yes, add 0.1 to the score in ii above and adjust rating accordingly: **Modified Rating** .9H

Comments:

Upland buffer between northern boundary of AA and highway greater than 50ft.

**14J. Groundwater Discharge/Recharge:** (check the appropriate indicators in i & ii below)

**i. Discharge Indicators**

- The AA is a slope wetland
- Springs or seeps are known or observed
- Vegetation growing during dormant season/drought
- Wetland occurs at the toe of a natural slope
- Seeps are present at the wetland edge
- AA permanently flooded during drought periods
- Wetland contains an outlet, but no inlet
- Shallow water table and the site is saturated to the surface
- Other:

**ii. Recharge Indicators**

- Permeable substrate present without underlying impeding layer
- Wetland contains inlet but no outlet
- Stream is a known 'losing' stream; discharge volume decreases
- Other:

**iii. Rating** (use the information from i and ii above and the table below to arrive at [check] the functional points and rating)

| Criteria                          | Duration of saturation at AA Wetlands <i>FROM GROUNDWATER DISCHARGE OR WITH WATER THAT IS RECHARGING THE GROUNDWATER SYSTEM</i> |     |     |      |
|-----------------------------------|---|-----|-----|------|
|                                   | P/P   | S/I | T   | None |
| Groundwater Discharge or Recharge | 1H  | .7M | .4M | .1L  |
| Insufficient Data/Information     | NA  |     |     |      |

**Comments:**

**14K. Uniqueness:**

**i. Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating)

| Replacement potential             | AA contains fen, bog, warm springs or mature (>80 yr-old) forested wetland or plant association listed as "S1" by the MTNHP |        |          | AA does not contain previously cited rare types <b>and</b> structural diversity (#13) is high <b>or</b> contains plant association listed as "S2" by the MTNHP |        |          | AA does not contain previously cited rare types or associations <b>and</b> structural diversity (#13) is low-moderate |        |          |
|-----------------------------------|---|--------|----------|--|--------|----------|---|--------|----------|
|                                   | rare  | common | abundant | rare   | common | abundant | rare  | common | abundant |
| Low disturbance at AA (#12i)      | 1H  | .9H    | .8H      | .8H  | .6M    | .5M      | .5M   | .4M    | .3L      |
| Moderate disturbance at AA (#12i) | .9H   | .8H    | .7M      | .7M  | .5M    | .4M      | .4M   | .3L    | .2L      |
| High disturbance at AA (#12i)     | .8H   | .7H    | .6M      | .6M  | .4M    | .3L      | .3L   | .2L    | .1L      |

**Comments:**

**14L. Recreation/Education Potential:** (affords "bonus" points if AA provides recreation or education opportunity)

**i. Is the AA a known or potential rec.ed. site:** (check)  Y  N  NA (if 'Yes' continue with the evaluation; if 'No' then click  NA here and proceed to the overall summary and rating page)

**ii. Check categories that apply to the AA:**  Educational/scientific study;  Consumptive rec.;  Non-consumptive rec.;  Other

**iii. Rating** (use the matrix below to arrive at [check] the functional points and rating)

| Known or Potential Recreation or Education Area  | Known | Potential |
|--|-------|-----------|
| Public ownership or public easement with general public access (no permission required)              | .2H   | .15H      |
| Private ownership with general public access (no permission required)                                | .15H  | .1M       |
| Private or public ownership without general public access, or requiring permission for public access | .1M   | .05L      |

**Comments:**

**Category I Wetland:** (must satisfy **one** of the following criteria; otherwise go to Category II)

- Score of 1 functional point for Listed/Proposed Threatened or Endangered Species; **or**
- Score of 1 functional point for Uniqueness; **or**
- Score of 1 functional point for Flood Attenuation **and** answer to Question 14E.ii is "yes"; **or**
- Percent of possible score > 80% (round to nearest whole #).

**Category II Wetland:** (Criteria for Category I not satisfied **and** meets any **one** of the following criteria; otherwise go to Category IV)

- Score of 1 functional point for MT Natural Heritage Program Species Habitat; **or**
- Score of .9 or 1 functional point for General Wildlife Habitat; **or**
- Score of .9 or 1 functional point for General Fish Habitat; **or**
- "High" to "Exceptional" ratings for **both** General Wildlife Habitat **and** General Fish/Aquatic Habitat; **or**
- Score of .9 functional point for Uniqueness; **or**
- Percent of possible score > 65% (round to nearest whole #).

**Category III Wetland:** (Criteria for Categories I, II, or IV not satisfied)

- 

**Category IV Wetland:** (Criteria for Categories I or II are not satisfied and all of the following criteria are met; otherwise go to Category III)

- "Low" rating for Uniqueness; **and**
- Vegetated wetland component < 1 acre (do not include upland vegetated buffer); **and**
- Percent of possible score < 35% (round to nearest whole #).

**OVERALL ANALYSIS AREA RATING:**

**MDT WETLAND MITIGATION SITE MONITORING FORM**

Project Site: Forsyth NW - Middle Assessment Date/Time 6/20/2014 8:46:32 AM

Person(s) conducting the assessment: B Sandefur, E Sandefur

Weather: Warm and sunny, slight breeze Location: ~8 miles NW of Forsyth

MDT District: Glendive Milepost: ~262 on US 12

Legal Description: T 7N R 39E Section(s) 33

Initial Evaluation Date: 8/15/2013 Monitoring Year: 2 #Visits in Year: 1

Size of Evaluation Area: 1.8 (acres)

Land use surrounding wetland:

Undeveloped ag land, Hwy 12

**HYDROLOGY**

Surface Water Source: Precipitation, runoff, shallow groundwater

Inundation:  Average Depth: 0.2 (ft) Range of Depths: 0-0.6 (ft)

Percent of assessment area under inundation: 5 %

Depth at emergent vegetation-open water boundary: 0.1 (ft)

If assessment area is not inundated then are the soils saturated within 12 inches of surface: Yes

Other evidence of hydrology on the site (ex. – drift lines, erosion, stained vegetation, etc):

Surface soil cracks, saturation, sediment and drift deposits, iron deposits, drain patterns.

**Groundwater Monitoring Wells**

Record depth of water surface below ground surface, in feet.

**Well ID**                      **Water Surface Depth (ft)**

No Wells

Additional Activities Checklist:

- Map emergent vegetation-open water boundary on aerial photograph.
- Observe extent of surface water during each site visit and look for evidence of past surface water elevations (drift lines, erosion, vegetation staining, etc.)
- Use GPS to survey groundwater monitoring well locations, if present.

**Hydrology Notes:**

Seasonal inundation from surface water/precipitation.

## VEGETATION COMMUNITIES

**Wildlife Comments:**

**PHOTOGRAPHS**

Take photographs of the following permanent reference points listed in the check list below. Record the direction of the photograph using a compass. When at the site for the first time, establish a permanent reference point by setting a ½ inch rebar or fencepost extending 2-3 feet above ground. Survey the location with a resource grade GPS and mark the location on the aerial photograph.

**Photograph Checklist:**

- One photograph for each of the four cardinal directions surrounding the wetland.
- At least one photograph showing upland use surrounding the wetland. If more than one upland exists then take additional photographs.
- At least one photograph showing the buffer surrounding the wetland.
- One photograph from each end of the vegetation transect, showing the transect.

**Comments:**

**ADDITIONAL ITEMS CHECKLIST**

**Hydrology**

- Map emergent vegetation/open water boundary on aerial photos.
- Observe extent of surface water. Look for evidence of past surface water elevations (e.g. drift lines, vegetation staining, erosion, etc).

**Photos**

- One photo from the wetland toward each of the four cardinal directions
- One photo showing upland use surrounding the wetland.
- One photo showing the buffer around the wetland
- One photo from each end of each vegetation transect, toward the transect

**Vegetation**

- Map vegetation community boundaries
- Complete Vegetation Transects

**Soils**

- Assess soils

**Wetland Delineations**

- Delineate wetlands according to applicable USACE protocol (1987 form or Supplement)
- Delineate wetland – upland boundary onto aerial photograph.

Wetland Delineation Comments

**Functional Assessments**

- Complete and attach full MDT Montana Wetland Assessment Method field forms.

Functional Assessment Comments:

**Maintenance**

Were man-made nesting structure installed at this site? No

If yes, do they need to be repaired?

If yes, describe the problems below and indicate if any actions were taken to remedy the problems

Were man-made structures built or installed to impound water or control water flow into or out of the wetland? No

If yes, are the structures in need of repair?

If yes, describe the problems below.

**WETLAND DETERMINATION DATA FORM – Great Plains Region**

Project/Site: Forsyth NW - Middle City/County: Rosebud Co. Sampling Date: 6/20/2014  
 Applicant/Owner: MDT State: MT Sampling Point: M-1u  
 Investigator(s): B Sandefur Section, Township, Range: 33 7N 39E  
 Landform (hillslope, terrace, etc.): Shoulder slope Local relief (concave, convex, none): flat Slope (%): \_\_\_\_\_  
 Subregion (LRR): LRR G Lat: 46.322939 Long: -106.842437 Datum: WGS84  
 Soil Map Unit Name: Harlem silty clay NWI classification: NA

Are climatic / hydrologic conditions on the site typical for this time of year? Yes  No  (If no, explain in Remarks.)  
 Are Vegetation , Soil , or Hydrology  significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation , Soil , or Hydrology  naturally problematic? (If needed, explain any answers in Remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

|   |   |
|---|---|
| Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> | Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> |
| Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>            |   |
| Wetland Hydrology Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>      |   |

Remarks: Data point located along slope of excavated basin above influence of seasonal wetland hydrology. Duration of saturation/inundation very dependant on periodic precipitation during wet season.

**VEGETATION - Use scientific names of plant**

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. <sup>2</sup>Location: PL=Pore Lining, M=Matrix.

**Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)**

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) (LRR F)
- 1 cm Muck (A9) (LRR F, G, H)
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- 2.5 cm Mucky Peat or Peat (S2) (LRR G, H)
- 5 cm Mucky Peat or Peat (S3) (LRR F)
- Sandy Gleyed Matrix (S4)
- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- High Plains Depressions (F16) (MLRA 72 & 73 of LRR H)

**Indicators for Problematic Hydric Soils<sup>3</sup>:**

- 1 cm Muck (A9) (LRR I, J)
- Coast Prairie Redox (A16) (LRR F, G, H)
- Dark Surface (S7) (LRR G)
- High Plains Depressions (F16) (LRR H outside of MLRA 72 & 73)
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Very Shallow Dark Surface (TF12)
- Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if present):**

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes  No

Remarks: Not hydric, appears to be situated near seasonal high water level based on soil characteristics (5% sodic conc 10YR 7/1).

**HYDROLOGY**

**Wetland Hydrology Indicators:**

Primary Indicators (minimum of one required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Inundation Visible on Aerial Imagery (B7)
- Water-Stained Leaves (B9)
- Salt Crust (B11)
- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Dry-Season Water Table (C2)
- Oxidized Rhizospheres on Living Roots (C3) (where not tilled)
- Presence of Reduced Iron (C4)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- Surface Soil Cracks (B6)
- Sparsely Vegetated Concave Surface (B8)
- Drainage Patterns (B10)
- Oxidized Rhizospheres on Living Roots (C3) (where tilled)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Geomorphic Position (D2)
- FAC-Neutral Test (D5)
- Frost-Heave Hummocks (D7) (LRR F)

**Field Observations:**

Surface Water Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Water Table Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Saturation Present? (includes capillary fringe) Yes  No  Depth (inches): \_\_\_\_\_

Wetland Hydrology Present? Yes  No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Data point above influence of normal saturation/inundation levels within excavated depression.

**WETLAND DETERMINATION DATA FORM – Great Plains Region**

Project/Site: Forsyth NW - Middle City/County: Rosebud Co. Sampling Date: 6/20/2014  
 Applicant/Owner: MDT State: MT Sampling Point: M-1w  
 Investigator(s): B Sandefur Section, Township, Range: 33 7N 39E  
 Landform (hillslope, terrace, etc.): Swale Local relief (concave, convex, none): concave Slope (%): 0  
 Subregion (LRR): LRR G Lat: 46.322913 Long: -106.842465 Datum: WGS84  
 Soil Map Unit Name: Harlem silty clay NWI classification: NA

Are climatic / hydrologic conditions on the site typical for this time of year? Yes  No  (If no, explain in Remarks.)  
 Are Vegetation , Soil , or Hydrology  significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation , Soil , or Hydrology  naturally problematic? (If needed, explain any answers in Remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

|   |   |
|---|---|

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Dry during early season evaluation, wetland hydrology likely not present during every year.

# MDT Montana Wetland Assessment Form (revised March 2008)

1. Project name  2. MDT project#  Control#

3. Evaluation Date  4. Evaluators  5. Wetland/Site# (s)

6. Wetland Location(s): T  R  Sec1  T  R  Sec2

Approx Stationing or Mileposts

Watershed  Watershed/County

7. Evaluating Agency

8. Wetland size acres   
 How assessed:

Purpose of Evaluation

Wetlands potentially affected by MDT project

Mitigation Wetlands: pre-construction

Mitigation Wetlands: post construction

Other

9. Assessment area (AA) size (acres)   
 How assessed:

**10. Classification of Wetland and Aquatic Habitats in AA**

| HGM Class (Brinson)  | Class (Cowardin)     | Modifier (Cowardin)  | Water Regime          | % of AA              |
|----------------------|----------------------|----------------------|-----------------------|----------------------|
| Depressional         | Emergent Wetland     | Excavated            | Seasonal/Intermittent | 100                  |
| <input type="text"/> | <input type="text"/> | <input type="text"/> | <input type="text"/>  | <input type="text"/> |
| <input type="text"/> | <input type="text"/> | <input type="text"/> | <input type="text"/>  | <input type="text"/> |
| <input type="text"/> | <input type="text"/> | <input type="text"/> | <input type="text"/>  | <input type="text"/> |
| <input type="text"/> | <input type="text"/> | <input type="text"/> | <input type="text"/>  | <input type="text"/> |
| <input type="text"/> | <input type="text"/> | <input type="text"/> | <input type="text"/>  | <input type="text"/> |

11. Estimated Relative Abundance

**12. General Condition of AA**

i. Disturbance: (use matrix below to determine [circle] appropriate response – see instructions for Montana-listed noxious weed and aquatic nuisance vegetation species (ANVS) lists)

| Conditions within AA  | Predominant conditions adjacent to (within 500 feet of) AA  |  |   |
|---|---|--|---|
|   | Managed in predominantly natural state; is not grazed, hayed, logged, or otherwise converted; does not contain roads or buildings; and noxious weed or ANVS cover is <=15%. | Land not cultivated, but may be moderately grazed or hayed or selectively logged; or has been subject to minor clearing; contains few roads or buildings; noxious weed or ANVS cover is <=30%. | Land cultivated or heavily grazed or logged; subject to substantial fill placement, grading, clearing, or hydrological alteration; high road or building density; or noxious weed or ANVS cover is >=30%. |
| AA occurs and is managed in predominantly natural state; is not grazed, hayed, logged, or otherwise converted; does not contain roads or occupied buildings; and noxious weed or ANVS cover is <=15%.   | <input type="text" value="low disturbance"/>  | <input type="text" value="low disturbance"/>   | <input type="text" value="moderate disturbance"/>   |
| AA not cultivated, but may be moderately grazed or hayed or selectively logged; or has been subject to relatively minor clearing, fill placement, or hydrological alteration; contains few roads or buildings; noxious weed or ANVS cover is <=30%. | <input type="text" value="moderate disturbance"/>   | <input type="text" value="moderate disturbance"/>  | <input type="text" value="high disturbance"/>   |
| AA cultivated or heavily grazed or logged; subject to relatively substantial fill placement, grading, clearing, or hydrological alteration; high road or building density; or noxious weed or ANVS cover is >=30%.                                  | <input type="text" value="high disturbance"/>   | <input type="text" value="high disturbance"/>  | <input type="text" value="high disturbance"/>   |

**Comments: (types of disturbance, intensity, season, etc)**

AA vegetation recovering from construction disturbance.

**ii. Prominent noxious, aquatic nuisance, other exotic species:**

Field bindweed.

**iii. Provide brief descriptive summary of AA and surrounding land use/habitat**

AA very similar to Forsyth NW - East only smaller. AA includes a linear, excavated roadside depression parallel to US 12. Surrounding land includes agriculture (grazing) and highway.

13. **Structural Diversity:** (based on number of "Cowardin" **vegetated** classes present [do not include unvegetated classes], see #10 above)

| Existing # of "Cowardin" Vegetated Classes in AA                | Initial Rating | Is current management preventing (passive) existence of additional vegetated classes? |      | Modified Rating |
|---|----------------|---|------|-----------------|
| >=3 (or 2 if 1 is forested) classes                             | H              | NA  | NA   | NA              |
| 2 (or 1 if forested) classes                                    | M              | NA  | NA   | NA              |
| 1 class, but not a monoculture                                  | M              | <NO   | YES> | L               |
| 1 class, monoculture (1 species comprises >=90% of total cover) | L              | NA  | NA   | NA              |

Comments: Emergent veg class present with approx 80% bare ground. Several cottonwood seedlings present in herbaceous layer.

### SECTION PERTAINING to FUNCTIONS VALUES ASSESSMENT

14A. Habitat for Federally Listed or Proposed Threatened or Endangered Plants or Animals:

i. AA is Documented (D) or Suspected (S) to contain (check one based on definitions contained in instructions):

Primary or critical habitat (list species)      D    S     \_\_\_\_\_

Secondary habitat (list Species)              D    S     \_\_\_\_\_

Incidental habitat (list species)            D    S     \_\_\_\_\_

No usable habitat                                  S

ii. **Rating** (use the conclusions from i above and the matrix below to arrive at [check] the functional points and rating)

| Highest Habitat Level        | doc/primary | sus/primary | doc/secondary | sus/secondary | doc/incidental | sus/incidental | None |
|------------------------------|-------------|-------------|---------------|---------------|----------------|----------------|------|
| Functional Points and Rating | 1H          | .9H         | .8H           | .7M           | .3L            | .1L            | 0L   |

Sources for documented use     USF&WS T&E list for Rosebud County

14B. Habitat for plant or animals rated S1, S2, or S3 by the Montana Natural Heritage Program: (not including species listed in 14A above)

i. AA is Documented (D) or Suspected (S) to contain (check one based on definitions contained in instructions):

Primary or critical habitat (list species)      D    S     Scarlet Ammannia - Ammannia robusta (S2)

Secondary habitat (list Species)              D    S     \_\_\_\_\_

Incidental habitat (list species)            D    S     Great Blue Heron (S3)

No usable habitat                                  S

ii. **Rating** (use the conclusions from i above and the matrix below to arrive at [check] the functional points and rating)

| Highest Habitat Level                                     | doc/primary | sus/primary | doc/secondary | sus/secondary | doc/incidental | sus/incidental | None |
|---|-------------|-------------|---------------|---------------|----------------|----------------|------|
| <b>S1 Species:</b><br>Functional Points and Rating        | 1H          | .8H         | .7M           | .6M           | .2L            | .1L            | 0L   |
| <b>S2 and S3 Species:</b><br>Functional Points and Rating | .9H         | .7M         | .6M           | .5M           | .2L            | .1L            | 0L   |

Sources for documented use     MTNHP SOC report for T7N R39E, direct observation of Ammannia

**14C. General Wildlife Habitat Rating:**

i. Evidence of overall wildlife use in the AA (check substantial, moderate, or low based on supporting evidence):

Low

**Substantial** (based on any of the following [check]):

- observations of abundant wildlife #s or high species diversity (during any period)
- abundant wildlife sign such as scat, tracks, nest structures, game trails, etc.
- presence of extremely limiting habitat features not available in the surrounding area
- interviews with local biologists with knowledge of the AA

**Minimal** (based on any of the following [check]):

- few or no wildlife observations during peak use periods
- little to no wildlife sign
- sparse adjacent upland food sources
- interviews with local biologists with knowledge of the AA

**Moderate** (based on any of the following [check]):

- observations of scattered wildlife groups or individuals or relatively few species during peak periods
- common occurrence of wildlife sign such as scat, tracks, nest structures, game trails, etc.
- adequate adjacent upland food sources
- interviews with local biologists with knowledge of the AA

ii. **Wildlife** habitat features (Working from top to bottom, check appropriate AA attributes in matrix to arrive at rating. Structural diversity is from #13. For class cover to be considered evenly distributed, the most and least prevalent **vegetated** classes must be within 20% of each other in terms of their percent composition of the AA (see #10). Abbreviations for surface water durations are as follows: P/P = permanent/perennial; S/I = seasonal/intermittent; T/E = temporary/ephemeral; and A = absent [see instructions for further definitions of these terms])

| Structural diversity (see #13)                   | High |     |     |   |        |     |     |   | Moderate |     |     |   |        |     |     |   | Low  |     |     |   |
|--|------|-----|-----|---|--------|-----|-----|---|----------|-----|-----|---|--------|-----|-----|---|------|-----|-----|---|
|  | Even |     |     |   | Uneven |     |     |   | Even     |     |     |   | Uneven |     |     |   | Even |     |     |   |
| Class cover distribution (all vegetated classes) |      |     |     |   |        |     |     |   |          |     |     |   |        |     |     |   |      |     |     |   |
| Duration of surface water in ≥ 10% of AA         | P/P  | S/I | T/E | A | P/P    | S/I | T/E | A | P/P      | S/I | T/E | A | P/P    | S/I | T/E | A | P/P  | S/I | T/E | A |
| Low disturbance at AA (see #12)                  | E    | E   | E   | H | E      | E   | H   | H | E        | H   | H   | M | E      | H   | M   | M | E    | H   | M   | M |

|                              | Exceptional                           |     |  | High |     |  | Moderate |     |  | Low |     |  |
| <b>Substantial</b>           |                                       | 1E  |  |      | .9H |  |          | .8H |  |     | .7M |  |
| <b>Moderate</b>              |                                       | .9H |  |      | .7M |  |          | .5M |  |     | .3L |  |
| <b>Minimal</b>               |                                       | .6M |  |      | .4M |  |          | .2L |  |     | .1L |  |

Comments

Very few signs of wildlife observed during field survey. This area is close to the roadway and will likely never achieve a high wildlife habitat rating.

**14D. General Fish Habitat Rating:** (Assess this function if the AA is used by fish or the existing situation is "correctable" such that the AA could be used by fish [i.e., fish use is precluded by perched culvert or other barrier, etc.]. If the AA is not used by fish, fish use is not restorable due to habitat constraints, or is not desired from a management perspective [such as fish entrapped in a canal], then check  NA here and proceed to 14E.)

i. **Habitat Quality and Known / Suspected Fish Species in AA** (use matrix to arrive at [check] the functional points and rating)

| Duration of surface water in AA                | Permanent / Perennial |     |          |     |      |     | Seasonal / Intermittent |     |          |     |      |     | Temporary / Ephemeral |     |          |     |      |     |
|--|-----------------------|-----|----------|-----|------|-----|-------------------------|-----|----------|-----|------|-----|-----------------------|-----|----------|-----|------|-----|
|  | Optimal               |     | Adequate |     | Poor |     | Optimal                 |     | Adequate |     | Poor |     | Optimal               |     | Adequate |     | Poor |     |
| Aquatic hiding / resting / escape cover        | O                     | S   | O        | S   | O    | S   | O                       | S   | O        | S   | O    | S   | O                     | S   | O        | S   | O    | S   |

| <b>FWP Tier I fish species</b>                 | 1E                    | .9H | .8H      | .7M | .6M  | .5M | .9H                     | .8H | .7M      | .6M | .5M  | .4M | .7M                   | .6M | .5M      | .4M | .3L  | .3L |
| <b>FWP Tier II or Native Game fish species</b> | .9H                   | .8H | .7M      | .6M | .5M  | .5M | .8H                     | .7M | .6M      | .5M | .4M  | .4M | .6M                   | .5M | .4M      | .3L | .2L  | .2L |
| <b>FWP Tier III or Introduced Game fish</b>    | .8H                   | .7M | .6M      | .5M | .5M  | .4M | .7M                     | .6M | .5M      | .4M | .4M  | .3L | .5M                   | .4M | .3L      | .2L | .2L  | .1L |
| <b>FWP Non-Game Tier IV or No fish species</b> | .5M                   | .5M | .5M      | .4M | .4M  | .3L | .4M                     | .4M | .4M      | .3L | .3L  | .2L | .2L                   | .2L | .2L      | .1L | .1L  | .1L |

Sources used for identifying fish sp. potentially found in AA:

ii. **Modified Rating** (NOTE: Modified score cannot exceed 1 or be less than 0.1)

a) Is fish use of the AA significantly reduced by a culvert, dike, or other man-made structure or activity or is the waterbody included on the current final MDEQ list of waterbodies in need of TMDL development with listed "Probable Impaired Uses" including cold or warm water fishery or aquatic life support, or do aquatic nuisance plant or animal species (see Appendix E) occur in fish habitat? Y  N  If yes, reduce score in i above by 0.1: **Modified Rating**

b) Does the AA contain a documented spawning area or other critical habitat feature (i.e., sanctuary pool, upwelling area, etc. - specify in comments) for native fish or introduced game fish?  Y  N If yes, add 0.1 to the adjusted score in i or iia above:

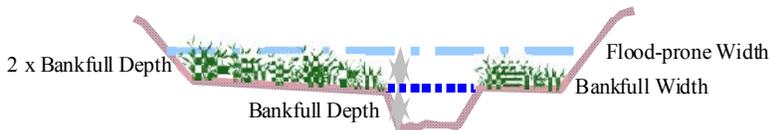

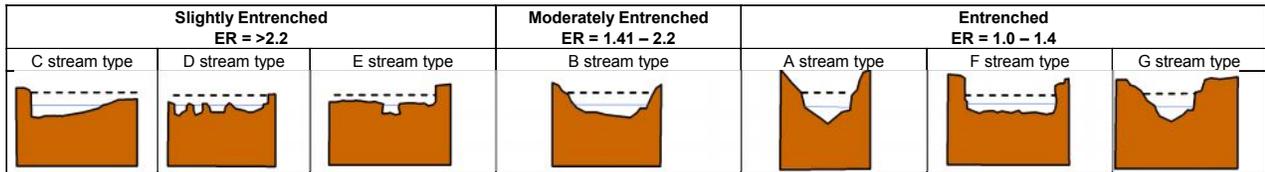

**Modified Rating**

iii. **Final Score and Rating:**  **Comments:**

**14E. Flood Attenuation:** (Applies only to wetlands subject to flooding via in-channel or overbank flow. If wetlands in AA are not flooded from in-channel or overbank flow, click  NA here and proceed to 14F.)

i. **Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating)

| Estimated or Calculated Entrenchment (Rosgen 1994, 1996) | Slightly entrenched - C, D, E stream types |        |      | Moderately entrenched - B stream type |        |      | Entrenched-A, F, G stream types |        |      |
|--|--|--------|------|---------------------------------------|--------|------|---------------------------------|--------|------|
|  | 75%  | 25-75% | <25% | 75%                                   | 25-75% | <25% | 75%                             | 25-75% | <25% |
| AA contains <b>no outlet or restricted outlet</b>        | 1H   | .9H    | .6M  | .8H                                   | .7M    | .5M  | .4M                             | .3L    | .2L  |
| AA contains <b>unrestricted outlet</b>                   | .9H  | .8H    | .5M  | .7M                                   | .6M    | .4M  | .3L                             | .2L    | .1L  |

Floodprone width  / Bankfull width  = Entrenchment ratio

ii. Are ≥10 acres of wetland in the AA subject to flooding AND are man-made features which may be significantly damaged by floods located within 0.5 mile downstream of the AA (check)? Y  N

**Comments:**

**14F. Short and Long Term Surface Water Storage:** (Applies to wetlands that flood or pond from overbank or in-channel flow, precipitation, upland surface flow, or groundwater flow. If no wetlands in the AA are subject to flooding or ponding, click  NA here and proceed to 14G.)

i. **Rating** (Working from top to bottom, use the matrix below to arrive at [check] the functional points and rating. Abbreviations for surface water durations are as follows: P/P = permanent/perennial; S/I = seasonal/intermittent; and T/E = temporary/ephemeral [see instructions for further definitions of these terms].)

| Estimated maximum acre feet of water contained in wetlands within the AA that are subject to periodic flooding or ponding | >5 acre feet |     |     | 1.1 to 5 acre feet |     |     | ≤1 acre foot |     |     |
|---|--------------|-----|-----|--------------------|-----|-----|--------------|-----|-----|
|   | P/P          | S/I | T/E | P/P                | S/I | T/E | P/P          | S/I | T/E |
| Wetlands in AA flood or pond ≥ 5 out of 10 years  | 1H           | .9H | .8H | .8H                | .6M | .5M | .4M          | .3L | .2L |
| Wetlands in AA flood or pond < 5 out of 10 years  | .9H          | .8H | .7M | .7M                | .5M | .4M | .3L          | .2L | .1L |

**Comments:**

**14G. Sediment/Nutrient/Toxicant Retention and Removal:** (Applies to wetlands with potential to receive sediments, nutrients, or toxicants through influx of surface or ground water or direct input. If no wetlands in the AA are subject to such input, click  **NA** here and proceed to 14H.)

i. **Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating [H = high, M = moderate, or L = low])

|   |  |     |     |     |   |     |     |     |
|---|--|-----|-----|-----|---|-----|-----|-----|
| Sediment, nutrient, and toxicant input levels within AA | AA receives or surrounding land use with potential to deliver levels of sediments, nutrients, or compounds at levels such that other functions are not substantially impaired. Minor sedimentation, sources of nutrients or toxicants, or signs of eutrophication present. |     |     |     | Waterbody on MDEQ list of waterbodies in need of TMDL development for "probable causes" related to sediment, nutrients, or toxicants or AA receives or surrounding land use with potential to deliver high levels of sediments, nutrients, or compounds such that other functions are substantially impaired. Major sedimentation, sources of nutrients or toxicants, or signs of eutrophication present. |     |     |     |
| % cover of wetland vegetation in AA                     | ≥ 70%  |     |     |     | < 70%   |     |     |     |
| Evidence of flooding / ponding in AA                    | Yes  | No  | Yes | No  | Yes   | No  | Yes | No  |
| AA contains no or restricted outlet                     | 1H   | .8H | .7M | .5M | .5M   | .4M | .3L | .2L |
| AA contains unrestricted outlet                         | .9H  | .7M | .6M | .4M | .4M   | .3L | .2L | .1L |

**Comments:** AA less than 70% vegetated due to recent construction of mitigation site.

**14H Sediment/Shoreline Stabilization:** (Applies only if AA occurs on or within the banks of a river, stream, or other natural or man-made drainage, or on the shoreline of a standing water body which is subject to wave action. If 14H does not apply, click  **NA** here and proceed to 14I.)

i. **Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating)

|   |   |  |                         |  |                       |  |
|---|---|--|-------------------------|--|-----------------------|--|
| % Cover of <u>wetland</u> streambank or shoreline by species with stability ratings of ≥6 (see Appendix F). | Duration of surface water adjacent to rooted vegetation |  |                         |  |                       |  |
|   | Permanent / Perennial                                   |  | Seasonal / Intermittent |  | Temporary / Ephemeral |  |
| ≥ 65%   | 1H  |  | .9H                     |  | .7M                   |  |
| 35-64%  | .7M   |  | .6M                     |  | .5M                   |  |
| < 35%   | .3L   |  | .2L                     |  | .1L                   |  |

AA with open water potentially subject to periodic wave action.

**Comments:**

**14I. Production Export/Food Chain Support:**

i. **Level of Biological Activity** (synthesis of wildlife and fish habitat ratings [check])

| General Fish Habitat Rating (14D.iii.) | General Wildlife Habitat Rating (14C.iii.) |   |   |
|--|--|---|---|
|  | E/H  | M | L |
| E/H                                    | H  | H | M |
| M                                      | H  | M | M |
| L                                      | M  | M | L |
| N/A                                    | H  | M | L |

ii. **Rating** (Working from top to bottom, use the matrix below to arrive at [check] the functional points and rating. Factor A = acreage of vegetated wetland component in the AA; Factor B = level of biological activity rating from above (14I.i.); Factor C = whether or not the AA contains a surface or subsurface outlet; the final three rows pertain to duration of surface water in the AA, where P/P, S/I, and T/E are as previously defined, and A = "absent" [see instructions for further definitions of these terms].)

| A     | Vegetated component >5 acres |     |          |     |     |     | Vegetated component 1-5 acres |     |          |     |     |     | Vegetated component <1 acre |     |          |     |     |     |

| B     | Yes                          | No  | Yes      | No  | Yes | No  | Yes                           | No  | Yes      | No  | Yes | No  | Yes                         | No  | Yes      | No  | Yes | No  |
| C     | 1E                           | .7H | .8H      | .5M | .6M | .4M | .9H                           | .6M | .7H      | .4M | .5M | .3L | .8H                         | .6M | .6M      | .4M | .3L | .2L |
| P/P   |                              |     |          |     |     |     |                               |     |          |     |     |     |                             |     |          |     |     |     |
| S/I   | .9H                          | .6M | .7H      | .4M | .5M | .3L | .8H                           | .5M | .6M      | .3L | .4M | .2L | .7H                         | .5M | .5M      | .3L | .3L | .2L |
| T/E/A | .8H                          | .5M | .6M      | .3L | .4M | .2L | .7H                           | .4M | .5M      | .2L | .3L | .1L | .6M                         | .4M | .4M      | .2L | .2L | .1L |

iii. **Modified Rating** (NOTE: Modified score cannot exceed 1 or be less than 0.1.) **Vegetated Upland Buffer (VUB):** Area with ≥ 30% plant cover, ≤ 15% noxious weed or ANVS cover, and that is not subjected to periodic mechanical mowing or clearing (unless for weed control).

a) Is there an average ≥ 50 foot-wide vegetated upland buffer around ≥ 75% of the AA circumference? Y  N  If yes, add 0.1 to the score in ii above and adjust rating accordingly: **Modified Rating** .3L

**Comments:**

**14J. Groundwater Discharge/Recharge:** (check the appropriate indicators in i & ii below)

**i. Discharge Indicators**

- The AA is a slope wetland
- Springs or seeps are known or observed
- Vegetation growing during dormant season/drought
- Wetland occurs at the toe of a natural slope
- Seeps are present at the wetland edge
- AA permanently flooded during drought periods
- Wetland contains an outlet, but no inlet
- Shallow water table and the site is saturated to the surface
- Other:

**ii. Recharge Indicators**

- Permeable substrate present without underlying impeding layer
- Wetland contains inlet but no outlet
- Stream is a known 'losing' stream; discharge volume decreases
- Other:

**iii. Rating** (use the information from i and ii above and the table below to arrive at [check] the functional points and rating)

| Criteria                          | Duration of saturation at AA Wetlands <i>FROM GROUNDWATER DISCHARGE OR WITH WATER THAT IS RECHARGING THE GROUNDWATER SYSTEM</i> |     |     |      |
|-----------------------------------|---|-----|-----|------|
|                                   | P/P   | S/I | T   | None |
| Groundwater Discharge or Recharge | 1H  | .7M | .4M | .1L  |
| Insufficient Data/Information     | NA  |     |     |      |

**Comments:** AA w/out permeable substrate, holds surface water eventually lost to evaporation.

**14K. Uniqueness:**

**i. Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating)

| Replacement potential             | AA contains fen, bog, warm springs or mature (>80 yr-old) forested wetland or plant association listed as "S1" by the MTNHP |        |          | AA does not contain previously cited rare types <b>and</b> structural diversity (#13) is high <b>or</b> contains plant association listed as "S2" by the MTNHP |        |          | AA does not contain previously cited rare types or associations <b>and</b> structural diversity (#13) is low-moderate |        |          |
|-----------------------------------|---|--------|----------|--|--------|----------|---|--------|----------|
|                                   | rare  | common | abundant | rare   | common | abundant | rare  | common | abundant |
| Low disturbance at AA (#12i)      | 1H  | .9H    | .8H      | .8H  | .6M    | .5M      | .5M   | .4M    | .3L      |
| Moderate disturbance at AA (#12i) | .9H   | .8H    | .7M      | .7M  | .5M    | .4M      | .4M   | .3L    | .2L      |
| High disturbance at AA (#12i)     | .8H   | .7H    | .6M      | .6M  | .4M    | .3L      | .3L   | .2L    | .1L      |

**Comments:** Habitat within AA typical of roadside ditch.

**14L. Recreation/Education Potential:** (affords "bonus" points if AA provides recreation or education opportunity)

**i. Is the AA a known or potential rec.ed. site:** (check)  Y  N  NA (if 'Yes' continue with the evaluation; if 'No' then click  NA here and proceed to the overall summary and rating page)

**ii. Check categories that apply to the AA:**  Educational/scientific study;  Consumptive rec.;  Non-consumptive rec.;  Other

**iii. Rating** (use the matrix below to arrive at [check] the functional points and rating)

| Known or Potential Recreation or Education Area  | Known | Potential |
|--|-------|-----------|
| Public ownership or public easement with general public access (no permission required)              | .2H   | .15H      |
| Private ownership with general public access (no permission required)                                | .15H  | .1M       |
| Private or public ownership without general public access, or requiring permission for public access | .1M   | .05L      |

**Comments:** AA small, adjacent to highway, and with little to no recreation or education potential.

**General Site Notes**

| Function & Value Variables                       | Rating | Actual Functional Points | Possible Functional Points | Functional Units:<br>(Actual Points x Estimated AA Acreage) | Indicate the four most prominent functions with an asterisk (*) |
|--|--------|--------------------------|----------------------------|---|---|

| Totals:  |        | 3.3                      | 9                          | 1.617   |   |
| Percent of Possible Score                        |        |                          | 36.67 %                    |   |   |

**Category I Wetland:** (must satisfy **one** of the following criteria; otherwise go to Category II)

- Score of 1 functional point for Listed/Proposed Threatened or Endangered Species; **or**
- Score of 1 functional point for Uniqueness; **or**
- Score of 1 functional point for Flood Attenuation **and** answer to Question 14E.ii is "yes"; **or**
- Percent of possible score > 80% (round to nearest whole #).

**Category II Wetland:** (Criteria for Category I not satisfied **and** meets any **one** of the following criteria; otherwise go to Category IV)

- Score of 1 functional point for MT Natural Heritage Program Species Habitat; **or**
- Score of .9 or 1 functional point for General Wildlife Habitat; **or**
- Score of .9 or 1 functional point for General Fish Habitat; **or**
- "High" to "Exceptional" ratings for **both** General Wildlife Habitat **and** General Fish/Aquatic Habitat; **or**
- Score of .9 functional point for Uniqueness; **or**
- Percent of possible score > 65% (round to nearest whole #).

**Category III Wetland:** (Criteria for Categories I, II, or IV not satisfied)

- 

**Category IV Wetland:** (Criteria for Categories I or II are not satisfied and all of the following criteria are met; otherwise go to Category III)

- "Low" rating for Uniqueness; **and**
- Vegetated wetland component < 1 acre (do not include upland vegetated buffer); **and**
- Percent of possible score < 35% (round to nearest whole #).

**OVERALL ANALYSIS AREA RATING:**  
(check appropriate category based on the criteria outlined above)

**MDT WETLAND MITIGATION SITE MONITORING FORM**

Project Site: Forsyth NW -East Assessment Date/Time 6/20/2014 8:46:32 AM

Person(s) conducting the assessment: B Sandefur, E Sandefur

Weather: Hot and clear Location: ~8 miles NW of Forsyth

MDT District: Glendive Milepost: ~262.3 on US 12

Legal Description: T 7N R 39E Section(s) 34

Initial Evaluation Date: 8/15/2013 Monitoring Year: 2 #Visits in Year: 1

Size of Evaluation Area: 2.74 (acres)

Land use surrounding wetland:

Undeveloped ag land, US12.

**HYDROLOGY**

Surface Water Source: Precipitation, runoff, shallow groundwater

Inundation:  Average Depth: 0.1 (ft) Range of Depths: 0-0.4 (ft)

Percent of assessment area under inundation: 5 %

Depth at emergent vegetation-open water boundary: 0.1 (ft)

If assessment area is not inundated then are the soils saturated within 12 inches of surface: Yes

Other evidence of hydrology on the site (ex. – drift lines, erosion, stained vegetation, etc):

Surface water, inundation visible on aerial imagery, saturation, water marks, water stained leaves, H2S odor, algal mat/crust, iron deposits, drift deposits, surface soil cracks, sparsely vegetated concave surface, geomorphic position.

**Groundwater Monitoring Wells**

Record depth of water surface below ground surface, in feet.

**Well ID**                      **Water Surface Depth (ft)**

No Wells

Additional Activities Checklist:

- Map emergent vegetation-open water boundary on aerial photograph.
- Observe extent of surface water during each site visit and look for evidence of past surface water elevations (drift lines, erosion, vegetation staining, etc.)
- Use GPS to survey groundwater monitoring well locations, if present.

**Hydrology Notes:**

## VEGETATION COMMUNITIES

**Wildlife Comments:**

**PHOTOGRAPHS**

Take photographs of the following permanent reference points listed in the check list below. Record the direction of the photograph using a compass. When at the site for the first time, establish a permanent reference point by setting a ½ inch rebar or fencepost extending 2-3 feet above ground. Survey the location with a resource grade GPS and mark the location on the aerial photograph.

**Photograph Checklist:**

- One photograph for each of the four cardinal directions surrounding the wetland.
- At least one photograph showing upland use surrounding the wetland. If more than one upland exists then take additional photographs.
- At least one photograph showing the buffer surrounding the wetland.
- One photograph from each end of the vegetation transect, showing the transect.

| <b>Photo #</b> | <b>Latitude</b> | <b>Longitude</b> | <b>Bearing</b> | <b>Description</b> |

**Comments:**

**ADDITIONAL ITEMS CHECKLIST**

**Hydrology**

- Map emergent vegetation/open water boundary on aerial photos.
- Observe extent of surface water. Look for evidence of past surface water elevations (e.g. drift lines, vegetation staining, erosion, etc).

**Photos**

- One photo from the wetland toward each of the four cardinal directions
- One photo showing upland use surrounding the wetland.
- One photo showing the buffer around the wetland
- One photo from each end of each vegetation transect, toward the transect

**Vegetation**

- Map vegetation community boundaries
- Complete Vegetation Transects

**Soils**

- Assess soils

**Wetland Delineations**

- Delineate wetlands according to applicable USACE protocol (1987 form or Supplement)
- Delineate wetland – upland boundary onto aerial photograph.

Wetland Delineation Comments

**Functional Assessments**

- Complete and attach full MDT Montana Wetland Assessment Method field forms.

Functional Assessment Comments:

**Maintenance**

Were man-made nesting structure installed at this site? No

If yes, do they need to be repaired?

If yes, describe the problems below and indicate if any actions were taken to remedy the problems

Were man-made structures built or installed to impound water or control water flow into or out of the wetland? No

If yes, are the structures in need of repair?

If yes, describe the problems below.

**WETLAND DETERMINATION DATA FORM – Great Plains Region**

Project/Site: Forsyth NW - East City/County: Rosebud Co. Sampling Date: 6/20/2014  
 Applicant/Owner: MDT State: MT Sampling Point: Ea-1u  
 Investigator(s): B Sandefur Section, Township, Range: 34 7N 39E  
 Landform (hillslope, terrace, etc.): Shoulder slope Local relief (concave, convex, none): flat Slope (%): \_\_\_\_\_  
 Subregion (LRR): LRR G Lat: 46.319621 Long: -106.836235 Datum: WGS84  
 Soil Map Unit Name: Harlem silty clay NWI classification: NA

Are climatic / hydrologic conditions on the site typical for this time of year? Yes  No  (If no, explain in Remarks.)  
 Are Vegetation , Soil , or Hydrology  significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation , Soil , or Hydrology  naturally problematic? (If needed, explain any answers in Remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

|   |   |
|---|---|
| Hydrophytic Vegetation Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> | Is the Sampled Area within a Wetland? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> |
| Hydric Soil Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>            |   |
| Wetland Hydrology Present? Yes <input type="checkbox"/> No <input checked="" type="checkbox"/>      |   |

Remarks: Located along slope of excavated basin above influence of seasonal surface water.

**VEGETATION - Use scientific names of plant**

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. <sup>2</sup>Location: PL=Pore Lining, M=Matrix.

**Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)**

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) (LRR F)
- 1 cm Muck (A9) (LRR F, G, H)
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- 2.5 cm Mucky Peat or Peat (S2) (LRR G, H)
- 5 cm Mucky Peat or Peat (S3) (LRR F)
- Sandy Gleyed Matrix (S4)
- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- High Plains Depressions (F16) (MLRA 72 & 73 of LRR H)

**Indicators for Problematic Hydric Soils<sup>3</sup>:**

- 1 cm Muck (A9) (LRR I, J)
- Coast Prairie Redox (A16) (LRR F, G, H)
- Dark Surface (S7) (LRR G)
- High Plains Depressions (F16) (LRR H outside of MLRA 72 & 73)
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Very Shallow Dark Surface (TF12)
- Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if present):**

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes  No

Remarks: Salt concentrations in profile.

**HYDROLOGY**

**Wetland Hydrology Indicators:**

Primary Indicators (minimum of one required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Inundation Visible on Aerial Imagery (B7)
- Water-Stained Leaves (B9)
- Salt Crust (B11)
- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Dry-Season Water Table (C2)
- Oxidized Rhizospheres on Living Roots (C3) (where not tilled)
- Presence of Reduced Iron (C4)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- Surface Soil Cracks (B6)
- Sparsely Vegetated Concave Surface (B8)
- Drainage Patterns (B10)
- Oxidized Rhizospheres on Living Roots (C3) (where tilled)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Geomorphic Position (D2)
- FAC-Neutral Test (D5)
- Frost-Heave Hummocks (D7) (LRR F)

**Field Observations:**

Surface Water Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Water Table Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Saturation Present? (includes capillary fringe) Yes  No  Depth (inches): \_\_\_\_\_

Wetland Hydrology Present? Yes  No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: No wetland hydrology at data point, above seasonal saturation zone from impounded water.

**WETLAND DETERMINATION DATA FORM – Great Plains Region**

Project/Site: Forsyth NW - East City/County: Rosebud Co. Sampling Date: 6/20/2014  
 Applicant/Owner: MDT State: MT Sampling Point: Ea-1w  
 Investigator(s): B Sandefur Section, Township, Range: 34 7N 39E  
 Landform (hillslope, terrace, etc.): Swale Local relief (concave, convex, none): Concave Slope (%): 0  
 Subregion (LRR): LRR G Lat: -106.837016 Long: 46.320046 Datum: WGS84  
 Soil Map Unit Name: Harlem silty clay NWI classification: NA

Are climatic / hydrologic conditions on the site typical for this time of year? Yes  No  (If no, explain in Remarks.)  
 Are Vegetation , Soil , or Hydrology  significantly disturbed? Are "Normal Circumstances" present? Yes  No   
 Are Vegetation , Soil , or Hydrology  naturally problematic? (If needed, explain any answers in Remarks.)

**SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.**

Hydrophytic Vegetation Present? Yes  No   
 Hydric Soil Present? Yes  No   
 Wetland Hydrology Present? Yes  No

Is the Sampled Area within a Wetland? Yes  No

Remarks: Located in approximate middle of excavated swale.

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. <sup>2</sup>Location: PL=Pore Lining, M=Matrix.

**Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)**

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) (LRR F)
- 1 cm Muck (A9) (LRR F, G, H)
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- 2.5 cm Mucky Peat or Peat (S2) (LRR G, H)
- 5 cm Mucky Peat or Peat (S3) (LRR F)
- Sandy Gleyed Matrix (S4)
- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- High Plains Depressions (F16) (MLRA 72 & 73 of LRR H)

**Indicators for Problematic Hydric Soils<sup>3</sup>:**

- 1 cm Muck (A9) (LRR I, J)
- Coast Prairie Redox (A16) (LRR F, G, H)
- Dark Surface (S7) (LRR G)
- High Plains Depressions (F16) (LRR H outside of MLRA 72 & 73)
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Very Shallow Dark Surface (TF12)
- Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if present):**

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes  No

Remarks:

**HYDROLOGY**

**Wetland Hydrology Indicators:**

**Primary Indicators (minimum of one required; check all that apply)**

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Inundation Visible on Aerial Imagery (B7)
- Water-Stained Leaves (B9)
- Salt Crust (B11)
- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Dry-Season Water Table (C2)
- Oxidized Rhizospheres on Living Roots (C3) (where not tilled)
- Presence of Reduced Iron (C4)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

**Secondary Indicators (minimum of two required)**

- Surface Soil Cracks (B6)
- Sparsely Vegetated Concave Surface (B8)
- Drainage Patterns (B10)
- Oxidized Rhizospheres on Living Roots (C3) (where tilled)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Geomorphic Position (D2)
- FAC-Neutral Test (D5)
- Frost-Heave Hummocks (D7) (LRR F)

**Field Observations:**

Surface Water Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Water Table Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Saturation Present? (includes capillary fringe) Yes  No  Depth (inches): \_\_\_\_\_

Wetland Hydrology Present? Yes  No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Area seasonally inundated, saturated from surface water impounded in excavated basin.

# MDT Montana Wetland Assessment Form (revised March 2008)

1. Project name  2. MDT project#  Control#

3. Evaluation Date  4. Evaluators  5. Wetland/Site# (s)

6. Wetland Location(s): T  R  Sec1  T  R  Sec2

Approx Stationing or Mileposts

Watershed  Watershed/County

7. Evaluating Agency

8. Wetland size acres   
 How assessed:

Purpose of Evaluation

Wetlands potentially affected by MDT project

Mitigation Wetlands: pre-construction

Mitigation Wetlands: post construction

Other

9. Assessment area (AA) size (acres)   
 How assessed:

**10. Classification of Wetland and Aquatic Habitats in AA**

| HGM Class (Brinson)  | Class (Cowardin)     | Modifier (Cowardin)  | Water Regime          | % of AA              |
|----------------------|----------------------|----------------------|-----------------------|----------------------|
| Depressional         | Emergent Wetland     | Excavated            | Seasonal/Intermittent | 100                  |
| <input type="text"/> | <input type="text"/> | <input type="text"/> | <input type="text"/>  | <input type="text"/> |
| <input type="text"/> | <input type="text"/> | <input type="text"/> | <input type="text"/>  | <input type="text"/> |
| <input type="text"/> | <input type="text"/> | <input type="text"/> | <input type="text"/>  | <input type="text"/> |

| <input type="text"/> | <input type="text"/> | <input type="text"/> | <input type="text"/>  | <input type="text"/> |

11. Estimated Relative Abundance

**12. General Condition of AA**

i. Disturbance: (use matrix below to determine [circle] appropriate response – see instructions for Montana-listed noxious weed and aquatic nuisance vegetation species (ANVS) lists)

| Conditions within AA  | Predominant conditions adjacent to (within 500 feet of) AA  |  |   |
|---|---|--|---|
|   | Managed in predominantly natural state; is not grazed, hayed, logged, or otherwise converted; does not contain roads or buildings; and noxious weed or ANVS cover is <=15%. | Land not cultivated, but may be moderately grazed or hayed or selectively logged; or has been subject to minor clearing; contains few roads or buildings; noxious weed or ANVS cover is <=30%. | Land cultivated or heavily grazed or logged; subject to substantial fill placement, grading, clearing, or hydrological alteration; high road or building density; or noxious weed or ANVS cover is >=30%. |
| AA occurs and is managed in predominantly natural state; is not grazed, hayed, logged, or otherwise converted; does not contain roads or occupied buildings; and noxious weed or ANVS cover is <=15%.   | <input type="text" value="low disturbance"/>  | <input type="text" value="low disturbance"/>   | <input type="text" value="moderate disturbance"/>   |
| AA not cultivated, but may be moderately grazed or hayed or selectively logged; or has been subject to relatively minor clearing, fill placement, or hydrological alteration; contains few roads or buildings; noxious weed or ANVS cover is <=30%. | <input type="text" value="moderate disturbance"/>   | <input type="text" value="moderate disturbance"/>  | <input type="text" value="high disturbance"/>   |
| AA cultivated or heavily grazed or logged; subject to relatively substantial fill placement, grading, clearing, or hydrological alteration; high road or building density; or noxious weed or ANVS cover is >=30%.                                  | <input type="text" value="high disturbance"/>   | <input type="text" value="high disturbance"/>  | <input type="text" value="high disturbance"/>   |

**Comments: (types of disturbance, intensity, season, etc)**

AA vegetation cover increased from 2013 following recent construction of wetland basin.

**ii. Prominent noxious, aquatic nuisance, other exotic species:**

**iii. Provide brief descriptive summary of AA and surrounding land use/habitat**

AA includes a linear, excavated roadside depression parallel to US 12. Surrounding land includes agriculture (grazing) and highway.

13. **Structural Diversity:** (based on number of "Cowardin" *vegetated* classes present [do not include unvegetated classes], see #10 above)

| Existing # of "Cowardin" Vegetated Classes in AA                | Initial Rating | Is current management preventing (passive) existence of additional vegetated classes? |      | Modified Rating |
|---|----------------|---|------|-----------------|
| >=3 (or 2 if 1 is forested) classes                             | H              | NA  | NA   | NA              |
| 2 (or 1 if forested) classes                                    | M              | NA  | NA   | NA              |
| 1 class, but not a monoculture                                  | M              | <NO   | YES> | L               |
| 1 class, monoculture (1 species comprises >=90% of total cover) | L              | NA  | NA   | NA              |

Comments: Emergent vegetation class present

**SECTION PERTAINING to FUNCTIONS VALUES ASSESSMENT**

14A. Habitat for Federally Listed or Proposed Threatened or Endangered Plants or Animals:

i. AA is Documented (D) or Suspected (S) to contain (check one based on definitions contained in instructions):

Primary or critical habitat (list species)     D    S    \_\_\_\_\_

Secondary habitat (list Species)             D    S    \_\_\_\_\_

Incidental habitat (list species)            D    S    \_\_\_\_\_

No usable habitat                                 S

ii. **Rating** (use the conclusions from i above and the matrix below to arrive at [check] the functional points and rating)

| Highest Habitat Level        | doc/primary | sus/primary | doc/secondary | sus/secondary | doc/incidental | sus/incidental | None |
|------------------------------|-------------|-------------|---------------|---------------|----------------|----------------|------|
| Functional Points and Rating | 1H          | .9H         | .8H           | .7M           | .3L            | .1L            | 0L   |

Sources for documented use    USF&WS T&E list for Rosebud County

14B. Habitat for plant or animals rated S1, S2, or S3 by the Montana Natural Heritage Program: (not including species listed in 14A above)

i. AA is Documented (D) or Suspected (S) to contain (check one based on definitions contained in instructions):

Primary or critical habitat (list species)     D    S    Scarlet Ammannia - Ammannia robusta (S2)

Secondary habitat (list Species)             D    S    \_\_\_\_\_

Incidental habitat (list species)            D    S    Great Blue Heron (S3)

No usable habitat                                 S

ii. **Rating** (use the conclusions from i above and the matrix below to arrive at [check] the functional points and rating)

| Highest Habitat Level                                     | doc/primary | sus/primary | doc/secondary | sus/secondary | doc/incidental | sus/incidental | None |

Sources for documented use    MTNHP SOC report for T7N R39E, direct observation of Ammannia

**14C. General Wildlife Habitat Rating:**

i. Evidence of overall wildlife use in the AA (check substantial, moderate, or low based on supporting evidence):

LOW

**Substantial** (based on any of the following [check]):

- observations of abundant wildlife #s or high species diversity (during any period)
- abundant wildlife sign such as scat, tracks, nest structures, game trails, etc.
- presence of extremely limiting habitat features not available in the surrounding area
- interviews with local biologists with knowledge of the AA

**Minimal** (based on any of the following [check]):

- few or no wildlife observations during peak use periods
- little to no wildlife sign
- sparse adjacent upland food sources
- interviews with local biologists with knowledge of the AA

**Moderate** (based on any of the following [check]):

- observations of scattered wildlife groups or individuals or relatively few species during peak periods
- common occurrence of wildlife sign such as scat, tracks, nest structures, game trails, etc.
- adequate adjacent upland food sources
- interviews with local biologists with knowledge of the AA

ii. **Wildlife** habitat features (Working from top to bottom, check appropriate AA attributes in matrix to arrive at rating. Structural diversity is from #13. For class cover to be considered evenly distributed, the most and least prevalent **vegetated** classes must be within 20% of each other in terms of their percent composition of the AA (see #10). Abbreviations for surface water durations are as follows: P/P = permanent/perennial; S/I = seasonal/intermittent; T/E = temporary/ephemeral; and A = absent [see instructions for further definitions of these terms])

| Structural diversity (see #13)                   | High |     |     |   |        |     |     |   | Moderate |     |     |   |        |     |     |   | Low  |     |     |   |
|--|------|-----|-----|---|--------|-----|-----|---|----------|-----|-----|---|--------|-----|-----|---|------|-----|-----|---|

|                              | Exceptional                           |     |  | High |     |  | Moderate |     |  | Low |     |  |
| <b>Substantial</b>           |                                       | 1E  |  |      | .9H |  |          | .8H |  |     | .7M |  |
| <b>Moderate</b>              |                                       | .9H |  |      | .7M |  |          | .5M |  |     | .3L |  |
| <b>Minimal</b>               |                                       | .6M |  |      | .4M |  |          | .2L |  |     | .1L |  |

**Comments** Minimal signs of wildlife observed during field survey. This area is close to the roadway and will likely never achieve a high wildlife habitat rating.

**14D. General Fish Habitat Rating:** (Assess this function if the AA is used by fish or the existing situation is "correctable" such that the AA could be used by fish [i.e., fish use is precluded by perched culvert or other barrier, etc.]. If the AA is not used by fish, fish use is not restorable due to habitat constraints, or is not desired from a management perspective [such as fish entrapped in a canal], then check  NA here and proceed to 14E.)

i. **Habitat Quality and Known / Suspected Fish Species in AA** (use matrix to arrive at [check] the functional points and rating)

| Duration of surface water in AA                | Permanent / Perennial |     |          |     |      |     | Seasonal / Intermittent |     |          |     |      |     | Temporary / Ephemeral |     |          |     |      |     |
|--|-----------------------|-----|----------|-----|------|-----|-------------------------|-----|----------|-----|------|-----|-----------------------|-----|----------|-----|------|-----|
|  | Optimal               |     | Adequate |     | Poor |     | Optimal                 |     | Adequate |     | Poor |     | Optimal               |     | Adequate |     | Poor |     |
| Aquatic hiding / resting / escape cover        | O                     | S   | O        | S   | O    | S   | O                       | S   | O        | S   | O    | S   | O                     | S   | O        | S   | O    | S   |
| Thermal cover optimal / suboptimal             | O                     | S   | O        | S   | O    | S   | O                       | S   | O        | S   | O    | S   | O                     | S   | O        | S   | O    | S   |
| <b>FWP Tier I fish species</b>                 | 1E                    | .9H | .8H      | .7M | .6M  | .5M | .9H                     | .8H | .7M      | .6M | .5M  | .4M | .7M                   | .6M | .5M      | .4M | .3L  | .3L |
| <b>FWP Tier II or Native Game fish species</b> | .9H                   | .8H | .7M      | .6M | .5M  | .5M | .8H                     | .7M | .6M      | .5M | .4M  | .4M | .6M                   | .5M | .4M      | .3L | .2L  | .2L |
| <b>FWP Tier III or Introduced Game fish</b>    | .8H                   | .7M | .6M      | .5M | .5M  | .4M | .7M                     | .6M | .5M      | .4M | .4M  | .3L | .5M                   | .4M | .3L      | .2L | .2L  | .1L |

Sources used for identifying fish sp. potentially found in AA:

ii. **Modified Rating** (NOTE: Modified score cannot exceed 1 or be less than 0.1)

a) Is fish use of the AA significantly reduced by a culvert, dike, or other man-made structure or activity or is the waterbody included on the current final MDEQ list of waterbodies in need of TMDL development with listed "Probable Impaired Uses" including cold or warm water fishery or aquatic life support, or do aquatic nuisance plant or animal species (see Appendix E) occur in fish habitat? Y  N  If yes, reduce score in i above by 0.1: **Modified Rating**

b) Does the AA contain a documented spawning area or other critical habitat feature (i.e., sanctuary pool, upwelling area, etc. - specify in comments) for native fish or introduced game fish?  Y  N If yes, add 0.1 to the adjusted score in i or iia above:

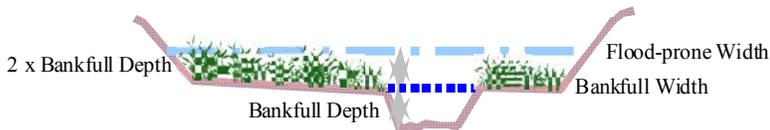

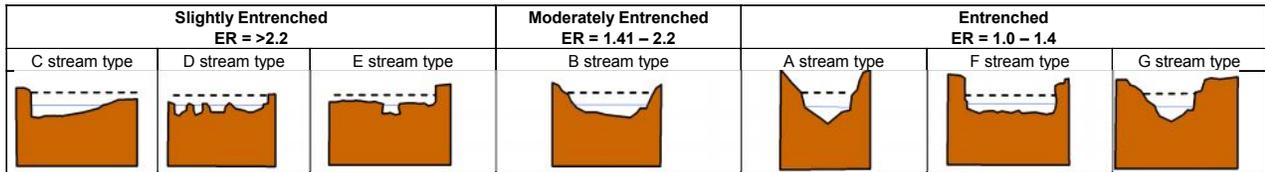

**Modified Rating**

iii. **Final Score and Rating:**  **Comments:**

**14E. Flood Attenuation:** (Applies only to wetlands subject to flooding via in-channel or overbank flow. If wetlands in AA are not flooded from in-channel or overbank flow, click  NA here and proceed to 14F.)

i. **Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating)

| Estimated or Calculated Entrenchment (Rosgen 1994, 1996) | Slightly entrenched - C, D, E stream types |        |      | Moderately entrenched - B stream type |        |      | Entrenched-A, F, G stream types |        |      |
|--|--|--------|------|---------------------------------------|--------|------|---------------------------------|--------|------|
|  | 75%  | 25-75% | <25% | 75%                                   | 25-75% | <25% | 75%                             | 25-75% | <25% |
| AA contains <b>no outlet or restricted outlet</b>        | 1H   | .9H    | .6M  | .8H                                   | .7M    | .5M  | .4M                             | .3L    | .2L  |
| AA contains <b>unrestricted outlet</b>                   | .9H  | .8H    | .5M  | .7M                                   | .6M    | .4M  | .3L                             | .2L    | .1L  |

Floodprone width  / Bankfull width  = Entrenchment ratio

ii. Are ≥10 acres of wetland in the AA subject to flooding AND are man-made features which may be significantly damaged by floods located within 0.5 mile downstream of the AA (check)? Y  N

**Comments:**

**14F. Short and Long Term Surface Water Storage:** (Applies to wetlands that flood or pond from overbank or in-channel flow, precipitation, upland surface flow, or groundwater flow. If no wetlands in the AA are subject to flooding or ponding, click  NA here and proceed to 14G.)

i. **Rating** (Working from top to bottom, use the matrix below to arrive at [check] the functional points and rating. Abbreviations for surface water durations are as follows: P/P = permanent/perennial; S/I = seasonal/intermittent; and T/E = temporary/ephemeral [see instructions for further definitions of these terms].)

| Estimated maximum acre feet of water contained in wetlands within the AA that are subject to periodic flooding or ponding | >5 acre feet |     |     | 1.1 to 5 acre feet |     |     | ≤1 acre foot |     |     |
|---|--------------|-----|-----|--------------------|-----|-----|--------------|-----|-----|
|   | P/P          | S/I | T/E | P/P                | S/I | T/E | P/P          | S/I | T/E |
| Wetlands in AA flood or pond ≥ 5 out of 10 years  | 1H           | .9H | .8H | .8H                | .6M | .5M | .4M          | .3L | .2L |
| Wetlands in AA flood or pond < 5 out of 10 years  | .9H          | .8H | .7M | .7M                | .5M | .4M | .3L          | .2L | .1L |

**Comments:**

**14G. Sediment/Nutrient/Toxicant Retention and Removal:** (Applies to wetlands with potential to receive sediments, nutrients, or toxicants through influx of surface or ground water or direct input. If no wetlands in the AA are subject to such input, click  **NA** here and proceed to 14H.)

i. **Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating [H = high, M = moderate, or L = low])

|   |  |     |     |     |   |     |     |     |
|---|--|-----|-----|-----|---|-----|-----|-----|
| Sediment, nutrient, and toxicant input levels within AA | AA receives or surrounding land use with potential to deliver levels of sediments, nutrients, or compounds at levels such that other functions are not substantially impaired. Minor sedimentation, sources of nutrients or toxicants, or signs of eutrophication present. |     |     |     | Waterbody on MDEQ list of waterbodies in need of TMDL development for "probable causes" related to sediment, nutrients, or toxicants or AA receives or surrounding land use with potential to deliver high levels of sediments, nutrients, or compounds such that other functions are substantially impaired. Major sedimentation, sources of nutrients or toxicants, or signs of eutrophication present. |     |     |     |
| % cover of wetland vegetation in AA                     | ≥ 70%  |     |     |     | < 70%   |     |     |     |
| Evidence of flooding / ponding in AA                    | Yes  | No  | Yes | No  | Yes   | No  | Yes | No  |
| AA contains no or restricted outlet                     | 1H   | .8H | .7M | .5M | .5M   | .4M | .3L | .2L |
| AA contains unrestricted outlet                         | .9H  | .7M | .6M | .4M | .4M   | .3L | .2L | .1L |

**Comments:** AA achieved greater than 70% vegetation cover, primarily early succession annuals.

**14H Sediment/Shoreline Stabilization:** (Applies only if AA occurs on or within the banks of a river, stream, or other natural or man-made drainage, or on the shoreline of a standing water body which is subject to wave action. If 14H does not apply, click  **NA** here and proceed to 14I.)

i. **Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating)

| % Cover of <u>wetland</u> streambank or shoreline by species with stability ratings of ≥6 (see Appendix F). | Duration of surface water adjacent to rooted vegetation |                         |                       |
|---|---|-------------------------|-----------------------|
|   | Permanent / Perennial                                   | Seasonal / Intermittent | Temporary / Ephemeral |
| ≥ 65%   | 1H  | .9H                     | .7M                   |
| 35-64%  | .7M   | .6M                     | .5M                   |
| < 35%   | .3L   | .2L                     | .1L                   |

AA with seasonal/ephemeral open water potentially subject to periodic wave action. Vegetation primarily not deep-rooted.

**Comments:**

**14I. Production Export/Food Chain Support:**

i. **Level of Biological Activity** (synthesis of wildlife and fish habitat ratings [check])

| General Fish Habitat Rating (14D.iii.) | General Wildlife Habitat Rating (14C.iii.) |   |   |
|--|--|---|---|
|  | E/H  | M | L |
| E/H                                    | H  | H | M |
| M                                      | H  | M | M |
| L                                      | M  | M | L |
| N/A                                    | H  | M | L |

ii. **Rating** (Working from top to bottom, use the matrix below to arrive at [check] the functional points and rating. Factor A = acreage of vegetated wetland component in the AA; Factor B = level of biological activity rating from above (14I.i.); Factor C = whether or not the AA contains a surface or subsurface outlet; the final three rows pertain to duration of surface water in the AA, where P/P, S/I, and T/E are as previously defined, and A = "absent" [see instructions for further definitions of these terms].)

| A     | Vegetated component >5 acres |     |          |     |     |     | Vegetated component 1-5 acres |     |          |     |     |     | Vegetated component <1 acre |     |          |     |     |     |
|-------|------------------------------|-----|----------|-----|-----|-----|-------------------------------|-----|----------|-----|-----|-----|-----------------------------|-----|----------|-----|-----|-----|
|       | High                         |     | Moderate |     | Low |     | High                          |     | Moderate |     | Low |     | High                        |     | Moderate |     | Low |     |
|       | Yes                          | No  | Yes      | No  | Yes | No  | Yes                           | No  | Yes      | No  | Yes | No  | Yes                         | No  | Yes      | No  | Yes | No  |
| P/P   | 1E                           | .7H | .8H      | .5M | .6M | .4M | .9H                           | .6M | .7H      | .4M | .5M | .3L | .8H                         | .6M | .6M      | .4M | .3L | .2L |
| S/I   | .9H                          | .6M | .7H      | .4M | .5M | .3L | .8H                           | .5M | .6M      | .3L | .4M | .2L | .7H                         | .5M | .5M      | .3L | .3L | .2L |
| T/E/A | .8H                          | .5M | .6M      | .3L | .4M | .2L | .7H                           | .4M | .5M      | .2L | .3L | .1L | .6M                         | .4M | .4M      | .2L | .2L | .1L |

iii. **Modified Rating** (NOTE: Modified score cannot exceed 1 or be less than 0.1.) **Vegetated Upland Buffer (VUB):** Area with ≥ 30% plant cover, ≤ 15% noxious weed or ANVS cover, and that is not subjected to periodic mechanical mowing or clearing (unless for weed control).

a) Is there an average ≥ 50 foot-wide vegetated upland buffer around ≥ 75% of the AA circumference? Y  N  If yes, add 0.1 to the score in ii above and adjust rating accordingly: **Modified Rating** .3L

**Comments:**

**14J. Groundwater Discharge/Recharge:** (check the appropriate indicators in i & ii below)

**i. Discharge Indicators**

- The AA is a slope wetland
- Springs or seeps are known or observed
- Vegetation growing during dormant season/drought
- Wetland occurs at the toe of a natural slope
- Seeps are present at the wetland edge
- AA permanently flooded during drought periods
- Wetland contains an outlet, but no inlet
- Shallow water table and the site is saturated to the surface
- Other: AA hydrologically connected to an historic ox bow

**ii. Recharge Indicators**

- Permeable substrate present without underlying impeding layer
- Wetland contains inlet but no outlet
- Stream is a known 'losing' stream; discharge volume decreases
- Other:

**iii. Rating** (use the information from i and ii above and the table below to arrive at [check] the functional points and rating)

| Criteria                          | Duration of saturation at AA Wetlands <i>FROM GROUNDWATER DISCHARGE OR WITH WATER THAT IS RECHARGING THE GROUNDWATER SYSTEM</i> |     |     |      |
|-----------------------------------|---|-----|-----|------|
|                                   | P/P   | S/I | T   | None |
| Groundwater Discharge or Recharge | 1H  | .7M | .4M | .1L  |
| Insufficient Data/Information     | NA  |     |     |      |

Comments:

**14K. Uniqueness:**

**i. Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating)

| Replacement potential             | AA contains fen, bog, warm springs or mature (>80 yr-old) forested wetland or plant association listed as "S1" by the MTNHP |        |          | AA does not contain previously cited rare types <b>and</b> structural diversity (#13) is high <b>or</b> contains plant association listed as "S2" by the MTNHP |        |          | AA does not contain previously cited rare types or associations <b>and</b> structural diversity (#13) is low-moderate |        |          |
|-----------------------------------|---|--------|----------|--|--------|----------|---|--------|----------|
|                                   | rare  | common | abundant | rare   | common | abundant | rare  | common | abundant |
| Low disturbance at AA (#12i)      | 1H  | .9H    | .8H      | .8H  | .6M    | .5M      | .5M   | .4M    | .3L      |
| Moderate disturbance at AA (#12i) | .9H   | .8H    | .7M      | .7M  | .5M    | .4M      | .4M   | .3L    | .2L      |
| High disturbance at AA (#12i)     | .8H   | .7H    | .6M      | .6M  | .4M    | .3L      | .3L   | .2L    | .1L      |

Comments: AA resembles a roadside ditch.

**14L. Recreation/Education Potential:** (affords "bonus" points if AA provides recreation or education opportunity)

**i. Is the AA a known or potential rec.ed. site:** (check)  Y  N  NA (if 'Yes' continue with the evaluation; if 'No' then click  NA here and proceed to the overall summary and rating page)

**ii. Check categories that apply to the AA:**  Educational/scientific study;  Consumptive rec.;  Non-consumptive rec.;  Other

**iii. Rating** (use the matrix below to arrive at [check] the functional points and rating)

| Known or Potential Recreation or Education Area  | Known | Potential |
|--|-------|-----------|
| Public ownership or public easement with general public access (no permission required)              | .2H   | .15H      |
| Private ownership with general public access (no permission required)                                | .15H  | .1M       |
| Private or public ownership without general public access, or requiring permission for public access | .1M   | .05L      |

Comments: AA small, adjacent to highway, and with little to no recreation or education potential.

**General Site Notes**

| Function & Value Variables                       | Rating | Actual Functional Points | Possible Functional Points | Functional Units:<br>(Actual Points x Estimated AA Acreage) | Indicate the four most prominent functions with an asterisk (*) |
|--|--------|--------------------------|----------------------------|---|---|

**Category I Wetland:** (must satisfy **one** of the following criteria; otherwise go to Category II)

- Score of 1 functional point for Listed/Proposed Threatened or Endangered Species; **or**
- Score of 1 functional point for Uniqueness; **or**
- Score of 1 functional point for Flood Attenuation **and** answer to Question 14E.ii is "yes"; **or**
- Percent of possible score > 80% (round to nearest whole #).

**Category II Wetland:** (Criteria for Category I not satisfied **and** meets any **one** of the following criteria; otherwise go to Category IV)

- Score of 1 functional point for MT Natural Heritage Program Species Habitat; **or**
- Score of .9 or 1 functional point for General Wildlife Habitat; **or**
- Score of .9 or 1 functional point for General Fish Habitat; **or**
- "High" to "Exceptional" ratings for **both** General Wildlife Habitat **and** General Fish/Aquatic Habitat; **or**
- Score of .9 functional point for Uniqueness; **or**
- Percent of possible score > 65% (round to nearest whole #).

**Category III Wetland:** (Criteria for Categories I, II, or IV not satisfied)

- 

**Category IV Wetland:** (Criteria for Categories I or II are not satisfied and all of the following criteria are met; otherwise go to Category III)

- "Low" rating for Uniqueness; **and**
- Vegetated wetland component < 1 acre (do not include upland vegetated buffer); **and**
- Percent of possible score < 35% (round to nearest whole #).

**OVERALL ANALYSIS AREA RATING:**  
(check appropriate category based on the criteria outlined above)

**MDT WETLAND MITIGATION SITE MONITORING FORM**

Project Site: Forsyth NW - Treasure Co. Line Assessment Date/Time 7/10/2014 2:19:12 PM

Person(s) conducting the assessment: B Sandefur, E Sandefur

Weather: Hot, breezy and mostly clear Location: ~17 miles west of Forsyth

MDT District: Glendive Milepost: ~RP 81.7 on I-94

Legal Description: T 6N R 38E Section(s) 23

Initial Evaluation Date: 8/14/2013 Monitoring Year: 2 #Visits in Year: 1

Size of Evaluation Area: 5.89 (acres)

Land use surrounding wetland:

I-94, Agriculture-grazing/pasture

**HYDROLOGY**

Surface Water Source: Groundwater, precipitation, surface runoff

Inundation:  Average Depth: 0.4 (ft) Range of Depths: 0-1.2 (ft)

Percent of assessment area under inundation: 90 %

Depth at emergent vegetation-open water boundary: 1 (ft)

If assessment area is not inundated then are the soils saturated within 12 inches of surface: Yes

Other evidence of hydrology on the site (ex. – drift lines, erosion, stained vegetation, etc):

Surface water, water marks, aquatic fauna, H2S odor, algal mat/crust.

**Groundwater Monitoring Wells**

Record depth of water surface below ground surface, in feet.

**Well ID**                      **Water Surface Depth (ft)**

No Wells

Additional Activities Checklist:

- Map emergent vegetation-open water boundary on aerial photograph.
- Observe extent of surface water during each site visit and look for evidence of past surface water elevations (drift lines, erosion, vegetation staining, etc.)
- Use GPS to survey groundwater monitoring well locations, if present.

**Hydrology Notes:**

Area hydrologically connected to Reservation Creek via pre-existing wetlands.

## VEGETATION COMMUNITIES

**Wildlife Comments:**

**PHOTOGRAPHS**

Take photographs of the following permanent reference points listed in the check list below. Record the direction of the photograph using a compass. When at the site for the first time, establish a permanent reference point by setting a ½ inch rebar or fencepost extending 2-3 feet above ground. Survey the location with a resource grade GPS and mark the location on the aerial photograph.

**Photograph Checklist:**

- One photograph for each of the four cardinal directions surrounding the wetland.
- At least one photograph showing upland use surrounding the wetland. If more than one upland exists then take additional photographs.
- At least one photograph showing the buffer surrounding the wetland.
- One photograph from each end of the vegetation transect, showing the transect.

**Comments:**

**ADDITIONAL ITEMS CHECKLIST**

**Hydrology**

- Map emergent vegetation/open water boundary on aerial photos.
- Observe extent of surface water. Look for evidence of past surface water elevations (e.g. drift lines, vegetation staining, erosion, etc).

**Photos**

- One photo from the wetland toward each of the four cardinal directions
- One photo showing upland use surrounding the wetland.
- One photo showing the buffer around the wetland
- One photo from each end of each vegetation transect, toward the transect

**Vegetation**

- Map vegetation community boundaries
- Complete Vegetation Transects

**Soils**

- Assess soils

**Wetland Delineations**

- Delineate wetlands according to applicable USACE protocol (1987 form or Supplement)
- Delineate wetland – upland boundary onto aerial photograph.

Wetland Delineation Comments

**Functional Assessments**

- Complete and attach full MDT Montana Wetland Assessment Method field forms.

Functional Assessment Comments:

**Maintenance**

Were man-made nesting structure installed at this site? No

If yes, do they need to be repaired?

If yes, describe the problems below and indicate if any actions were taken to remedy the problems

Were man-made structures built or installed to impound water or control water flow into or out of the wetland? No

If yes, are the structures in need of repair?

If yes, describe the problems below.

**WETLAND DETERMINATION DATA FORM – Great Plains Region**

<sup>1</sup>Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. <sup>2</sup>Location: PL=Pore Lining, M=Matrix.

**Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)**

- Histosol (A1)
- Histic Epipedon (A2)
- Black Histic (A3)
- Hydrogen Sulfide (A4)
- Stratified Layers (A5) (LRR F)
- 1 cm Muck (A9) (LRR F, G, H)
- Depleted Below Dark Surface (A11)
- Thick Dark Surface (A12)
- Sandy Mucky Mineral (S1)
- 2.5 cm Mucky Peat or Peat (S2) (LRR G, H)
- 5 cm Mucky Peat or Peat (S3) (LRR F)
- Sandy Gleyed Matrix (S4)
- Sandy Redox (S5)
- Stripped Matrix (S6)
- Loamy Mucky Mineral (F1)
- Loamy Gleyed Matrix (F2)
- Depleted Matrix (F3)
- Redox Dark Surface (F6)
- Depleted Dark Surface (F7)
- Redox Depressions (F8)
- High Plains Depressions (F16) (MLRA 72 & 73 of LRR H)

**Indicators for Problematic Hydric Soils<sup>3</sup>:**

- 1 cm Muck (A9) (LRR I, J)
- Coast Prairie Redox (A16) (LRR F, G, H)
- Dark Surface (S7) (LRR G)
- High Plains Depressions (F16) (LRR H outside of MLRA 72 & 73)
- Reduced Vertic (F18)
- Red Parent Material (TF2)
- Very Shallow Dark Surface (TF12)
- Other (Explain in Remarks)

<sup>3</sup>Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

**Restrictive Layer (if present):**

Type: \_\_\_\_\_  
Depth (inches): \_\_\_\_\_

Hydric Soil Present? Yes  No

Remarks: Non-hydric soils. Very fine sand, friable in upper 12in. Redox and salt concentrations below 12in.

**HYDROLOGY**

**Wetland Hydrology Indicators:**

Primary Indicators (minimum of one required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Inundation Visible on Aerial Imagery (B7)
- Water-Stained Leaves (B9)
- Salt Crust (B11)
- Aquatic Invertebrates (B13)
- Hydrogen Sulfide Odor (C1)
- Dry-Season Water Table (C2)
- Oxidized Rhizospheres on Living Roots (C3) (where not tilled)
- Presence of Reduced Iron (C4)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- Surface Soil Cracks (B6)
- Sparsely Vegetated Concave Surface (B8)
- Drainage Patterns (B10)
- Oxidized Rhizospheres on Living Roots (C3) (where tilled)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Geomorphic Position (D2)
- FAC-Neutral Test (D5)
- Frost-Heave Hummocks (D7) (LRR F)

**Field Observations:**

Surface Water Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Water Table Present? Yes  No  Depth (inches): \_\_\_\_\_  
 Saturation Present? (includes capillary fringe) Yes  No  Depth (inches): \_\_\_\_\_

Wetland Hydrology Present? Yes  No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Surface soil cracks from native clastic clays and not a result of periodic surface saturation. Area appears above the influence of seasonal high water and not likely to convert to wetland.

Wetland Hydrology Present? Yes  No

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks: Area hydrologically connected to adjacent pre-existing wetland along Reservation Creek.

# MDT Montana Wetland Assessment Form (revised March 2008)

1. Project name  2. MDT project#  Control#

3. Evaluation Date  4. Evaluators  5. Wetland/Site# (s)

6. Wetland Location(s): T  R  Sec1  T  R  Sec2

Approx Stationing or Mileposts

Watershed  Watershed/County

7. Evaluating Agency

8. Wetland size acres   
 How assessed:

Purpose of Evaluation

Wetlands potentially affected by MDT project

Mitigation Wetlands: pre-construction

Mitigation Wetlands: post construction

Other

9. Assessment area (AA) size (acres)   
 How assessed:

**10. Classification of Wetland and Aquatic Habitats in AA**

| HGM Class (Brinson)  | Class (Cowardin)     | Modifier (Cowardin)  | Water Regime         | % of AA              |
|----------------------|----------------------|----------------------|----------------------|----------------------|
| Depressional         | Emergent Wetland     | Excavated            | Permanent/Perennial  | 100                  |
| <input type="text"/> |
| <input type="text"/> |
| <input type="text"/> |
| <input type="text"/> |
| <input type="text"/> |

11. Estimated Relative Abundance

**12. General Condition of AA**

i. Disturbance: (use matrix below to determine [circle] appropriate response – see instructions for Montana-listed noxious weed and aquatic nuisance vegetation species (ANVS) lists)

| Conditions within AA  | Predominant conditions adjacent to (within 500 feet of) AA  |  |   |
|---|---|--|---|
|   | Managed in predominantly natural state; is not grazed, hayed, logged, or otherwise converted; does not contain roads or buildings; and noxious weed or ANVS cover is <=15%. | Land not cultivated, but may be moderately grazed or hayed or selectively logged; or has been subject to minor clearing; contains few roads or buildings; noxious weed or ANVS cover is <=30%. | Land cultivated or heavily grazed or logged; subject to substantial fill placement, grading, clearing, or hydrological alteration; high road or building density; or noxious weed or ANVS cover is >=30%. |
| AA occurs and is managed in predominantly natural state; is not grazed, hayed, logged, or otherwise converted; does not contain roads or occupied buildings; and noxious weed or ANVS cover is <=15%.   | <input type="text" value="low disturbance"/>  | <input type="text" value="low disturbance"/>   | <input type="text" value="moderate disturbance"/>   |
| AA not cultivated, but may be moderately grazed or hayed or selectively logged; or has been subject to relatively minor clearing, fill placement, or hydrological alteration; contains few roads or buildings; noxious weed or ANVS cover is <=30%. | <input type="text" value="moderate disturbance"/>   | <input type="text" value="moderate disturbance"/>  | <input type="text" value="high disturbance"/>   |
| AA cultivated or heavily grazed or logged; subject to relatively substantial fill placement, grading, clearing, or hydrological alteration; high road or building density; or noxious weed or ANVS cover is >=30%.                                  | <input type="text" value="high disturbance"/>   | <input type="text" value="high disturbance"/>  | <input type="text" value="high disturbance"/>   |

**Comments: (types of disturbance, intensity, season, etc)**

Constructed AA with sufficient time for vegetation to establish.

**ii. Prominent noxious, aquatic nuisance, other exotic species:**

**iii. Provide brief descriptive summary of AA and surrounding land use/habitat**

AA includes excavated wetland constructed adjacent to a larger wetland area. Surrounding land use includes I-94 and agriculture.

13. **Structural Diversity:** (based on number of "Cowardin" **vegetated** classes present [do not include unvegetated classes], see #10 above)

| Existing # of "Cowardin" Vegetated Classes in AA                | Initial Rating | Is current management preventing (passive) existence of additional vegetated classes? |      | Modified Rating |
|---|----------------|---|------|-----------------|
| >=3 (or 2 if 1 is forested) classes                             | H              | NA  | NA   | NA              |
| 2 (or 1 if forested) classes                                    | M              | NA  | NA   | NA              |
| 1 class, but not a monoculture                                  | M              | <NO   | YES> | L               |
| 1 class, monoculture (1 species comprises >=90% of total cover) | L              | NA  | NA   | NA              |

Comments: Emergent with scattered shrubs.

**SECTION PERTAINING to FUNCTIONS VALUES ASSESSMENT**

14A. Habitat for Federally Listed or Proposed Threatened or Endangered Plants or Animals:

i. AA is Documented (D) or Suspected (S) to contain (check one based on definitions contained in instructions):

Primary or critical habitat (list species)     D    S    \_\_\_\_\_

Secondary habitat (list Species)             D    S    \_\_\_\_\_

Incidental habitat (list species)            D    S    \_\_\_\_\_

No usable habitat                                 S

ii. **Rating** (use the conclusions from i above and the matrix below to arrive at [check] the functional points and rating)

| Highest Habitat Level        | doc/primary | sus/primary | doc/secondary | sus/secondary | doc/incidental | sus/incidental | None |
|------------------------------|-------------|-------------|---------------|---------------|----------------|----------------|------|
| Functional Points and Rating | 1H          | .9H         | .8H           | .7M           | .3L            | .1L            | 0L   |

Sources for documented use    USF&WS T&E list for Rosebud County

14B. Habitat for plant or animals rated S1, S2, or S3 by the Montana Natural Heritage Program: (not including species listed in 14A above)

i. AA is Documented (D) or Suspected (S) to contain (check one based on definitions contained in instructions):

Primary or critical habitat (list species)     D    S    \_\_\_\_\_

Secondary habitat (list Species)             D    S    Great Blue Heron (S3)

Incidental habitat (list species)            D    S    \_\_\_\_\_

No usable habitat                                 S

ii. **Rating** (use the conclusions from i above and the matrix below to arrive at [check] the functional points and rating)

| Highest Habitat Level                                     | doc/primary | sus/primary | doc/secondary | sus/secondary | doc/incidental | sus/incidental | None |
|---|-------------|-------------|---------------|---------------|----------------|----------------|------|
| <b>S1 Species:</b><br>Functional Points and Rating        | 1H          | .8H         | .7M           | .6M           | .2L            | .1L            | 0L   |
| <b>S2 and S3 Species:</b><br>Functional Points and Rating | .9H         | .7M         | .6M           | .5M           | .2L            | .1L            | 0L   |

Sources for documented use    GBH observed on site.

**14C. General Wildlife Habitat Rating:**

i. Evidence of overall wildlife use in the AA (check substantial, moderate, or low based on supporting evidence):

Moderate

**Substantial** (based on any of the following [check]):

- observations of abundant wildlife #s or high species diversity (during any period)
- abundant wildlife sign such as scat, tracks, nest structures, game trails, etc.
- presence of extremely limiting habitat features not available in the surrounding area
- interviews with local biologists with knowledge of the AA

**Minimal** (based on any of the following [check]):

- few or no wildlife observations during peak use periods
- little to no wildlife sign
- sparse adjacent upland food sources
- interviews with local biologists with knowledge of the AA

**Moderate** (based on any of the following [check]):

- observations of scattered wildlife groups or individuals or relatively few species during peak periods
- common occurrence of wildlife sign such as scat, tracks, nest structures, game trails, etc.
- adequate adjacent upland food sources
- interviews with local biologists with knowledge of the AA

ii. **Wildlife** habitat features (Working from top to bottom, check appropriate AA attributes in matrix to arrive at rating. Structural diversity is from #13. For class cover to be considered evenly distributed, the most and least prevalent **vegetated** classes must be within 20% of each other in terms of their percent composition of the AA (see #10). Abbreviations for surface water durations are as follows: P/P = permanent/perennial; S/I = seasonal/intermittent; T/E = temporary/ephemeral; and A = absent [see instructions for further definitions of these terms])

| Structural diversity (see #13)                   | High |     |     |   |        |     |     |   | Moderate |     |     |   |        |     |     |   | Low  |     |     |   |
|--|------|-----|-----|---|--------|-----|-----|---|----------|-----|-----|---|--------|-----|-----|---|------|-----|-----|---|
|  | Even |     |     |   | Uneven |     |     |   | Even     |     |     |   | Uneven |     |     |   | Even |     |     |   |
| Class cover distribution (all vegetated classes) |      |     |     |   |        |     |     |   |          |     |     |   |        |     |     |   |      |     |     |   |
| Duration of surface water in ≥ 10% of AA         | P/P  | S/I | T/E | A | P/P    | S/I | T/E | A | P/P      | S/I | T/E | A | P/P    | S/I | T/E | A | P/P  | S/I | T/E | A |
| Low disturbance at AA (see #12)                  | E    | E   | E   | H | E      | E   | H   | H | E        | H   | H   | M | E      | H   | M   | M | E    | H   | M   | M |
| Moderate disturbance at AA (see #12)             | H    | H   | H   | H | H      | H   | H   | M | H        | H   | M   | M | H      | M   | M   | L | H    | M   | L   | L |

Comments

**14D. General Fish Habitat Rating:** (Assess this function if the AA is used by fish or the existing situation is "correctable" such that the AA could be used by fish [i.e., fish use is precluded by perched culvert or other barrier, etc.]. If the AA is not used by fish, fish use is not restorable due to habitat constraints, or is not desired from a management perspective [such as fish entrapped in a canal], then check

**NA** here and proceed to 14E.)

i. **Habitat Quality and Known / Suspected Fish Species in AA** (use matrix to arrive at [check] the functional points and rating)

| Duration of surface water in AA                | Permanent / Perennial |     |          |     |      |     | Seasonal / Intermittent |     |          |     |      |     | Temporary / Ephemeral |     |          |     |      |     |
|--|-----------------------|-----|----------|-----|------|-----|-------------------------|-----|----------|-----|------|-----|-----------------------|-----|----------|-----|------|-----|

Sources used for identifying fish sp. potentially found in AA:

ii. **Modified Rating** (NOTE: Modified score cannot exceed 1 or be less than 0.1)

a) Is fish use of the AA significantly reduced by a culvert, dike, or other man-made structure or activity or is the waterbody included on the current final MDEQ list of waterbodies in need of TMDL development with listed "Probable Impaired Uses" including cold or warm water fishery or aquatic life support, or do aquatic nuisance plant or animal species (see Appendix E) occur in fish habitat? Y  N  If yes, reduce score in i above by 0.1: **Modified Rating**

b) Does the AA contain a documented spawning area or other critical habitat feature (i.e., sanctuary pool, upwelling area, etc. - specify in comments) for native fish or introduced game fish?  Y  N If yes, add 0.1 to the adjusted score in i or iia above:

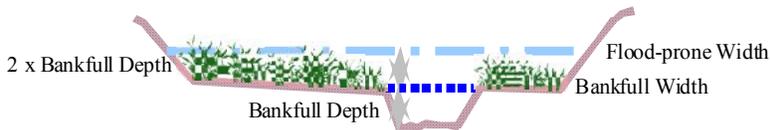

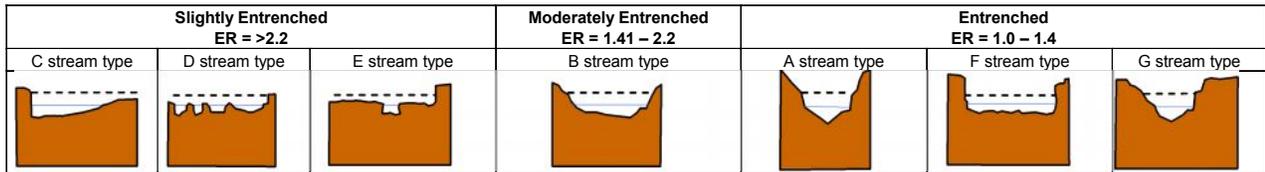

**Modified Rating**

iii. **Final Score and Rating:**  **Comments:**

**14E. Flood Attenuation:** (Applies only to wetlands subject to flooding via in-channel or overbank flow. If wetlands in AA are not flooded from in-channel or overbank flow, click  NA here and proceed to 14F.)

i. **Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating)

| Estimated or Calculated Entrenchment (Rosgen 1994, 1996) | Slightly entrenched - C, D, E stream types |        |      | Moderately entrenched - B stream type |        |      | Entrenched-A, F, G stream types |        |      |
|--|--|--------|------|---------------------------------------|--------|------|---------------------------------|--------|------|
|  | 75%  | 25-75% | <25% | 75%                                   | 25-75% | <25% | 75%                             | 25-75% | <25% |
| AA contains <b>no outlet or restricted outlet</b>        | 1H   | .9H    | .6M  | .8H                                   | .7M    | .5M  | .4M                             | .3L    | .2L  |
| AA contains <b>unrestricted outlet</b>                   | .9H  | .8H    | .5M  | .7M                                   | .6M    | .4M  | .3L                             | .2L    | .1L  |

Floodprone width  / Bankfull width  = Entrenchment ratio

ii. Are ≥10 acres of wetland in the AA subject to flooding AND are man-made features which may be significantly damaged by floods located within 0.5 mile downstream of the AA (check)? Y  N

**Comments:**

**14F. Short and Long Term Surface Water Storage:** (Applies to wetlands that flood or pond from overbank or in-channel flow, precipitation, upland surface flow, or groundwater flow. If no wetlands in the AA are subject to flooding or ponding, click  NA here and proceed to 14G.)

i. **Rating** (Working from top to bottom, use the matrix below to arrive at [check] the functional points and rating. Abbreviations for surface water durations are as follows: P/P = permanent/perennial; S/I = seasonal/intermittent; and T/E = temporary/ephemeral [see instructions for further definitions of these terms].)

| Estimated maximum acre feet of water contained in wetlands within the AA that are subject to periodic flooding or ponding | >5 acre feet |     |     | 1.1 to 5 acre feet |     |     | ≤1 acre foot |     |     |
|---|--------------|-----|-----|--------------------|-----|-----|--------------|-----|-----|
|   | P/P          | S/I | T/E | P/P                | S/I | T/E | P/P          | S/I | T/E |
| Wetlands in AA flood or pond ≥ 5 out of 10 years  | 1H           | .9H | .8H | .8H                | .6M | .5M | .4M          | .3L | .2L |
| Wetlands in AA flood or pond < 5 out of 10 years  | .9H          | .8H | .7M | .7M                | .5M | .4M | .3L          | .2L | .1L |

**Comments:**

**14G. Sediment/Nutrient/Toxicant Retention and Removal:** (Applies to wetlands with potential to receive sediments, nutrients, or toxicants through influx of surface or ground water or direct input. If no wetlands in the AA are subject to such input, click  **NA** here and proceed to 14H.)

i. **Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating [H = high, M = moderate, or L = low])

|   |  |     |     |     |   |     |     |     |
|---|--|-----|-----|-----|---|-----|-----|-----|
| Sediment, nutrient, and toxicant input levels within AA | AA receives or surrounding land use with potential to deliver levels of sediments, nutrients, or compounds at levels such that other functions are not substantially impaired. Minor sedimentation, sources of nutrients or toxicants, or signs of eutrophication present. |     |     |     | Waterbody on MDEQ list of waterbodies in need of TMDL development for "probable causes" related to sediment, nutrients, or toxicants or AA receives or surrounding land use with potential to deliver high levels of sediments, nutrients, or compounds such that other functions are substantially impaired. Major sedimentation, sources of nutrients or toxicants, or signs of eutrophication present. |     |     |     |
| % cover of wetland vegetation in AA                     | ≥ 70%  |     |     |     | < 70%   |     |     |     |
| Evidence of flooding / ponding in AA                    | Yes  | No  | Yes | No  | Yes   | No  | Yes | No  |
| AA contains no or restricted outlet                     | 1H   | .8H | .7M | .5M | .5M   | .4M | .3L | .2L |
| AA contains unrestricted outlet                         | .9H  | .7M | .6M | .4M | .4M   | .3L | .2L | .1L |

Comments:

**14H Sediment/Shoreline Stabilization:** (Applies only if AA occurs on or within the banks of a river, stream, or other natural or man-made drainage, or on the shoreline of a standing water body which is subject to wave action. If 14H does not apply, click  **NA** here and proceed to 14I.)

i. **Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating)

| % Cover of <u>wetland</u> streambank or shoreline by species with stability ratings of ≥6 (see Appendix F). | Duration of surface water adjacent to rooted vegetation |  |                         |  |                       |  |
|---|---|--|-------------------------|--|-----------------------|--|
|   | Permanent / Perennial                                   |  | Seasonal / Intermittent |  | Temporary / Ephemeral |  |
| ≥ 65%   | 1H  |  | .9H                     |  | .7M                   |  |
| 35-64%  | .7M   |  | .6M                     |  | .5M                   |  |
| < 35%   | .3L   |  | .2L                     |  | .1L                   |  |

Comments:

**14I. Production Export/Food Chain Support:**

i. **Level of Biological Activity** (synthesis of wildlife and fish habitat ratings [check])

| General Fish Habitat Rating (14D.iii.) | General Wildlife Habitat Rating (14C.iii.) |   |   |
|--|--|---|---|
|  | E/H  | M | L |
| E/H                                    | H  | H | M |
| M                                      | H  | M | M |
| L                                      | M  | M | L |
| N/A                                    | H  | M | L |

ii. **Rating** (Working from top to bottom, use the matrix below to arrive at [check] the functional points and rating. Factor A = acreage of vegetated wetland component in the AA; Factor B = level of biological activity rating from above (14I.i.); Factor C = whether or not the AA contains a surface or subsurface outlet; the final three rows pertain to duration of surface water in the AA, where P/P, S/I, and T/E are as previously defined, and A = "absent" [see instructions for further definitions of these terms].)

| A     | Vegetated component >5 acres |     |          |     |     |     | Vegetated component 1-5 acres |     |          |     |     |     | Vegetated component <1 acre |     |          |     |     |     |

| S/I   | .9H                          | .6M | .7H      | .4M | .5M | .3L | .8H                           | .5M | .6M      | .3L | .4M | .2L | .7H                         | .5M | .5M      | .3L | .3L | .2L |
| T/E/A | .8H                          | .5M | .6M      | .3L | .4M | .2L | .7H                           | .4M | .5M      | .2L | .3L | .1L | .6M                         | .4M | .4M      | .2L | .2L | .1L |

iii. **Modified Rating** (NOTE: Modified score cannot exceed 1 or be less than 0.1.) **Vegetated Upland Buffer (VUB):** Area with ≥ 30% plant cover, ≤ 15% noxious weed or ANVS cover, and that is not subjected to periodic mechanical mowing or clearing (unless for weed control).

a) Is there an average ≥ 50 foot-wide vegetated upland buffer around ≥ 75% of the AA circumference? Y  N  If yes, add 0.1 to the score in ii above and adjust rating accordingly: **Modified Rating** .7M

Comments:

AA bordered by I-94 to north.

**14J. Groundwater Discharge/Recharge:** (check the appropriate indicators in i & ii below)

**i. Discharge Indicators**

- The AA is a slope wetland
- Springs or seeps are known or observed
- Vegetation growing during dormant season/drought
- Wetland occurs at the toe of a natural slope
- Seeps are present at the wetland edge
- AA permanently flooded during drought periods
- Wetland contains an outlet, but no inlet
- Shallow water table and the site is saturated to the surface
- Other:

**ii. Recharge Indicators**

- Permeable substrate present without underlying impeding layer
- Wetland contains inlet but no outlet
- Stream is a known 'losing' stream; discharge volume decreases
- Other:

**iii. Rating** (use the information from i and ii above and the table below to arrive at [check] the functional points and rating)

| Criteria                          | Duration of saturation at AA Wetlands <i>FROM GROUNDWATER DISCHARGE OR WITH WATER THAT IS RECHARGING THE GROUNDWATER SYSTEM</i> |     |     |      |
|-----------------------------------|---|-----|-----|------|
|                                   | P/P   | S/I | T   | None |
| Groundwater Discharge or Recharge | 1H  | .7M | .4M | .1L  |
| Insufficient Data/Information     | NA  |     |     |      |

Comments:

**14K. Uniqueness:**

**i. Rating** (working from top to bottom, use the matrix below to arrive at [check] the functional points and rating)

| Replacement potential             | AA contains fen, bog, warm springs or mature (>80 yr-old) forested wetland or plant association listed as "S1" by the MTNHP |        |          | AA does not contain previously cited rare types <b>and</b> structural diversity (#13) is high <b>or</b> contains plant association listed as "S2" by the MTNHP |        |          | AA does not contain previously cited rare types or associations <b>and</b> structural diversity (#13) is low-moderate |        |          |
|-----------------------------------|---|--------|----------|--|--------|----------|---|--------|----------|
|                                   | rare  | common | abundant | rare   | common | abundant | rare  | common | abundant |
| Low disturbance at AA (#12i)      | 1H  | .9H    | .8H      | .8H  | .6M    | .5M      | .5M   | .4M    | .3L      |
| Moderate disturbance at AA (#12i) | .9H   | .8H    | .7M      | .7M  | .5M    | .4M      | .4M   | .3L    | .2L      |
| High disturbance at AA (#12i)     | .8H   | .7H    | .6M      | .6M  | .4M    | .3L      | .3L   | .2L    | .1L      |

Comments:

**14L. Recreation/Education Potential:** (affords "bonus" points if AA provides recreation or education opportunity)

**i. Is the AA a known or potential rec.ed. site:** (check)  Y  N  NA (if 'Yes' continue with the evaluation; if 'No' then click  NA here and proceed to the overall summary and rating page)

**ii. Check categories that apply to the AA:**  Educational/scientific study;  Consumptive rec.;  Non-consumptive rec.;  Other

**iii. Rating** (use the matrix below to arrive at [check] the functional points and rating)

| Known or Potential Recreation or Education Area  | Known | Potential |
|--|-------|-----------|
| Public ownership or public easement with general public access (no permission required)              | .2H   | .15H      |
| Private ownership with general public access (no permission required)                                | .15H  | .1M       |
| Private or public ownership without general public access, or requiring permission for public access | .1M   | .05L      |

Comments:

**General Site Notes**

| Function & Value Variables                       | Rating | Actual Functional Points | Possible Functional Points | Functional Units:<br>(Actual Points x Estimated AA Acreage) | Indicate the four most prominent functions with an asterisk (*) |
|--|--------|--------------------------|----------------------------|---|---|
| A. Listed/Proposed T&E Species Habitat           | L      | 0                        | 1                          | 0   | <input type="checkbox"/>  |

| Percent of Possible Score                        |        |                          | <b>73.13</b>               | %   |   |

**Category I Wetland:** (must satisfy **one** of the following criteria; otherwise go to Category II)

- Score of 1 functional point for Listed/Proposed Threatened or Endangered Species; **or**
- Score of 1 functional point for Uniqueness; **or**
- Score of 1 functional point for Flood Attenuation **and** answer to Question 14E.ii is "yes"; **or**
- Percent of possible score > 80% (round to nearest whole #).

**Category II Wetland:** (Criteria for Category I not satisfied **and** meets any **one** of the following criteria; otherwise go to Category IV)

- Score of 1 functional point for MT Natural Heritage Program Species Habitat; **or**
- Score of .9 or 1 functional point for General Wildlife Habitat; **or**
- Score of .9 or 1 functional point for General Fish Habitat; **or**
- "High" to "Exceptional" ratings for **both** General Wildlife Habitat **and** General Fish/Aquatic Habitat; **or**
- Score of .9 functional point for Uniqueness; **or**
- Percent of possible score > 65% (round to nearest whole #).

**Category III Wetland:** (Criteria for Categories I, II, or IV not satisfied)

- 

**Category IV Wetland:** (Criteria for Categories I or II are not satisfied and all of the following criteria are met; otherwise go to Category III)

- "Low" rating for Uniqueness; **and**
- Vegetated wetland component < 1 acre (do not include upland vegetated buffer); **and**
- Percent of possible score < 35% (round to nearest whole #).

**OVERALL ANALYSIS AREA RATING:**  
(check appropriate category based on the criteria outlined above)
