

# How to View and Search These Presentations

The PDF files on this CD should be read with Acrobat Reader 6.0. If you do not have Acrobat Reader 6.0, you can download it free of charge from the Adobe Website by clicking [HERE](#) or on the **Get Adobe Acrobat Reader** button on the OPEN page. Note: for users of Windows releases Win98 and Win95, you will only be able to upgrade to release 5.

To begin navigation of these E-Books, click on the title of the E-Book you want to view. Once in the E-Book START PDF file, notice the **navigation button** at the top right-hand side of the first page. A click on this button, as on this page, will always return you to the OPEN page.

All of the documents on this CD are searchable via the built-in Acrobat 6.0 search tool. In order to invoke search in Acrobat:

Once you get into the E-Book, the expressway icon button will always take you back to the START page of the document you are browsing.

1. Click on **Edit/Search** or merely click on the **Binocular Search Icon** on the tool bar. At this point you will be presented a *Search PDF* dialog box.
2. Since the E-Books on this CD are in multiple files, select the “*All PDF Documents in.*” option for all the E-Books. Or, select “*In the current PDF document*” if you already have a E-Book open and want to search for words and phrases within it.
3. Use the drag-down menu bar in the document selection box and choose “*Browse for location...*” You may then use the browser navigation box to point to the folder where you have the E-Books, either on the CD or on your hard drive.
4. When your *Search Results* are presented, click on the desired reference where you will see your choice highlighted. Note: only the first instance of the search string will be displayed within a document. In order to search for further instances, use **CTRL + G**.
5. You may close the search panel by clicking on the “*Hide*” tab on the top-upper right of the panel.

Note that in these E-Books there are numerous cross references to other paragraphs, tables, and figures in the current E-Book you are browsing. In addition, there are cross references to elements in the other E-Book. In all cases, if you click on a cross reference, you can return to the page you started from by going to **View/Go To/Previous View**. This will work only if you have not paginated or scrolled within the document you linked to before attempting to return to the starting document.

If you have any problems using the Acrobat search tool, there is an excellent on-line help function accessed by clicking on **Help**.
